Acknowledgments

First and foremost I am deeply grateful to Ruth Sima Rigamu who was my host and teacher during my 12 fieldwork stays between 2003 and 2014 in the village Hiovabon in the Autonomous Region of Bougainville, Papua New Guinea. She cared for my well-being in every respect and organized our local reseach team. I gratefully acknowledge the intensive cooperation of the authors, editors and proofreaders of this text collection, listed here in alphabetical order: Jubilee Kamai, Enoch Horai Magum, Helen Kobaa Magum, Shalom (Salome) Magum, Joyce Maion, Naphtali Maion, Paul Morekevan, Ondria Tavagaga.

Special thanks are due to the graphic artist Neville Vitahi whose illustrations are an invaluable contribution to the preservation of the Teop people's knowledge of their traditional material culture.

My gratitude extends also to Ruth Saovana Spriggs who worked with me on the Teop language documentation project from 1994 until 2005, the research assistants Roslyn Purupuru, Jessica Reinig, Marciia Schwartz, and Yvonne Thiesen, and last but not least the funding organizations, The Australian Research Council (1994), the Volkwagen Foundation (2000-2007), and the German Research Foundation (2009-2011).

Finally, I would like to express my sincere thanks to Christian Döhler, the editor of the Open Text Collection, for his productive comments on the content and form of this volume and the transformation of the Word and ELAN files into this book.

Abbreviations

Terms referring to specific morphosyntactic categories of the Teop language start with a capital letter.

The morphosyntactic functions and meanings of glossed morphemes, especially those that are not dealt with in Chapter 3 like the demonstratives (DEM1 – DEM7), can easily be searched for in the Multifunctional Teop-English Dictionary (Mosel 2019), see Section 12 for filtered searches, and https://dictionaria.clld.org/contributions/teop#twords2

ACAUS	Anticausative Prefix, see Section 6
ADJR	The suffix *-ana* derives Adjectives, see Section 6
ADVERS	Adversative Conjunction *he* 'but, while, when', see Section 11
ADVR	The prefix *va-* derives Adverbs from Adjectives, see Section 5.3 and Section 6
ANA	Anaphoric Demonstrative in Noun Phrases, see Section 8.1
APPL	Applicative Particle *ni* in the VC is transitive, see Section 4.1
ART	Article, see Section 8.2 and Section 8.3
CAUS	Causative Prefix *vaa-*, *va-*, see Section 6
COMPL1	Complementizer *tea* introduces Complement Clauses with anaphoric zero subjects, see Section 11
COMPL2	Complementizer be^2 introduces Complement Clauses with a subject Noun Phrase or Pronoun that is different from that of the main clause, see Section 11
CONSEC	Conjunction *re* marks dependent non-embedded clauses that denote a consecutive event, see Section 9.3 and Section 11,
CONT	Adverb *bata* expresses continuity; it is translated by 'along, continuously, for a while' or left untranslated, see Section 7.1
DAT	Preposition *ki*, *k-* indicates that its complement Pronoun or Noun Phrase refers to an addressee or beneficiary; it is often incorporated in the verb complex, see Section 7.3
DEM	Demonstrative functioning as an argument, adjunct, or determiner; the distinct types of demonstrative are indicated by numbers from DEM1 to DEM7.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

DEREL	Derelational Suffix *-na* derives non-relational Nouns from a relational Nouns, see Section 10
DIM	Diminutive Particle, see Section 8.4.
EMPH2	The emphatic particle *kou*.
EX	exclusive ('we, but not you'), see Section 9.1
GOAL	Preposition *vo* governs an Adverb, a Locative Phrase or a Prepositional Phrase, see Section 4.1 and Section 7.3
H-	the prefix *e-* marks Heavy Personal Pronouns, see Section 9.1 and Section 9.2
IN	inclusive ('we including you'), see Section 9.1
IPFV	Imperfective Aspect Marker, see Section 7.5
INDEF	Indefiniteness Marker in Noun Phrases, see Section 8.4.
KIN.PLM	Kinship Pluralmarker, see Section 8.3
LNK	the Linker *vaa* links modifying Adverbs, Locative Phrases, Prepositional Phrases and tea-Complement Clauses to the modified Noun or Verb. Linker Phrases also function as the core of a Verb Complex, see Section 4.2
MULT	the prefix *va-* derives verbs denoting multiple situations, including reciprocal actions, see Section 6
NSPEC	Non-Specific Article, see Section 8.2.
NEG1 ... NEG2	Double Negator *sa(ka)* ... *haa*, see Section 4.2 and Section 7.1
OBJ.ART	Object Article introduces non-topical object NPs, see Section 3 and Section 8.2.
OBJM	Object Marker within the Verb Complex, see Section 7.1
PFV	Perfective Aspect Marker within the Verb Complex, see Section 7.5
PL	plural, see Section 7.1, Section 8.2, Section 9.1, Table 20, and Table 21
PLM	Pluralmarker heading NPs, see Section 8.3
POSS	Possessive Marker in Inalienable Possessive Constructions, see Section 9.1 and Section 10
POSS.PRON	Possessive Pronoun, see Section 9.1 and Section 10
PREP	the multi-purpose Preposition *te*, see Section 4.2
PRON	Pronoun, see Table 20 in Section 9.1
RED	reduplication, see Section 6
REL	Relative Pronoun, see Section 11
SG	singular, see Section 8.1, Section 9.1, Table 20, and Table 21
TM	the pre-head particles TAM1 – TAM8 in Verb Complexes mark temporal relations and modality, see Section 7.4

Chapter 1

The Teop people and their language

Ulrike Mosel

The Teop people live in the Autonomous Region of Bougainville Island of Papua New Guinea, in the Local Level Government area Tinputz of the North Bougainville District. On the map in Figure 1 this area includes the Teop Harbour which lies south of the village Tinputz.

Teop is an Oceanic Austronesian language that belongs to the Nehan-North Bougainville network of the North-West Solomonic Group of the Meso-Melanesian North-West Solomonic Group (Ross 1988: 217).[1] Figure 2 shows the languages spoken in the Autonomous Region of Bougainville. The current number of speakers of the Teop language is unknown. According to Grimes (2000), quoted by Tryon (2015: 37) the number of speakers was 5,000 in 1991. During our documentation project (1994-2014) Teop people estimated that the number of Teop speakers was about 6,000.

Besides the official languages English and Tok Pisin, the Autonomous Region of Bougainville counts 17 Austronesian and eight Papuan languages.[2] According to the Bougainville Human Development Report more than 80% of the population of North Bougainville were literate (Chalmers 2009). The report does not distinguish between literacy in English, Tok Pisin or vernacular languages in its statistics.

[1]Extensive resources in and about the Teop language are archived in the Open Language Archives Community (OLAC), see http://language-archives.org/ and OLAC resources in and about the Teop language: http://www.language-archives.org/language/tio

[2]See Tryon (2015: 37, 40) and Smith-Dennis (2020: 2-4), and the references given there.

Chapter 2

The Teop language documentation and the content of this volume

Ulrike Mosel

1 The historical background of the Teop language documentation

The Teop language documentation project started with a fieldwork methods course which the native speaker Ruth Saovana Spriggs and I gave at the Australian National University in 1992. In 1994 we got a grant from the Australian Research Council that enabled Saovana to travel home and do audio-recorded interviews about the culture of her people and their personal histories. When I moved to Kiel in Germany in 1995, Saovana and I continued our work per email and in person when she visited me in Kiel for three months in 1995 and two months in 1999.

From 2000 to 2007 our project was generously funded by the Dokumentation-Bedrohter-Sprachen Programm (DoBeS) of the Volkswagen Foundation, so that we could do further fieldwork, pay the Teop team members in Bougainville for their full time or part time work, and employ research assistants in Kiel and Canberra.[1] Saovana was a team member until March 2005 when she left the project to concentrate on her PhD thesis. In 2009 the project was funded for 16 months by the German Research Foundation, and afterwards by private resources. In 2014 I visited Bougainville for the last time.

The organization of our work in Bougainville was considerably influenced by the so-called Bougainville Conflict, a civil war which had its roots in the people's sufferings from colonialism and started in 1988. The most important dates of the island's history are listed in Table 1. The Bougainville Conflict was a civil

Table 1: Some dates of the history of the Bougainville Island[2]

DATE	DESCRIPTION
1885-1914	German colonial rule
1901-1902	First mission of the Catholic Marists
1914-1920	Australian military administration
1920-1942	Australian Administration granted by the League of Nations
1920	Start of the Methodist mission
1924	Start of the Seventh-day Adventist mission
1942-1945	2nd World War
1942	Invasion by the Japanese army
1943	Invasion by the Allied Forces
1945-1975	Australian administration
1972	Beginning of mining at the Paguna copper and goal mine (Panguna Mine)
1975	Independence of Papua New Guinea (PNG)
1988	Begin of the Bougainville Conflict between the landowners of Panguna and the Bougainville Copper Ltd, which escalated into an armed conflict
1990-1997	Absence of an effective government body, development of anarchy
1997	Truce, deployment of peace monitoring groups from New Zealand
1998	Permanent ceasefire, peace monitoring groups from Australia
2001	Peace agreement

war that arose between the Papua New Guinea Security Forces (PNG SF) and Bougainvillean people who formed the Bougainville Revolutionary Army (BRA) to fight against the disastrous environmental effects of the Panguna Mine, the exploitation of the indigenous landowners, and the immigration of 15,000-20,000 non-Bougainvillean workers.[3] When in 1989 the mine closed and in 1990 the

[3]Regan (2001)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

PNGDF (Papua New Guinea Defense Force) imposed a blockade on the Bougainville Island, all immigrants left the island and all kinds of trade were stopped, so that "subsistence gardening became the sole means of survival" (Havini 2004: 4). Bougainvillean people who had lived and worked in other provinces had to return to their villages in Bougainville. The Teop people were not directly involved in the battles, but they suffered from the blockade, unjust treatment by both parties, and attacks by criminal gangs. After the peace agreement in 2001, this unsecure and economically demanding situation continued for many years.

2 The collaborative fieldwork

In 2000 Saovana and I travelled for a short visit to Bougainville where she introduced me to some Teop leaders and to Ruth Sima Rigamu who invited me to stay with her in the village Hiovabon during future fieldwork visits. After this visit, Saovana went to Bougainville by herself in 2001 and 2003 to do more interviews, whereas I did twelve fieldwork trips by myself between 2003 and 2014, and one in 2006 together with the student assistant Yvonne Thiesen. Since Saovana and I did not do fieldwork together in Bougainville, this section only describes the work of the team I worked with in Hiovabon.

The social and economic consequences of the Bougainville Conflict had a considerable impact on the organization of our fieldwork and the subsequent processing of the data collected:

1. Because of the lack of any trade stores in the Teop area and the need for subsistence gardening and fishing, the average duration of our fieldwork was only four weeks.

2. For security reasons, I was not allowed to bring a computer with me until 2008, so that all transcriptions of recordings, translations and fieldnotes had to be written by hand, then typed up and printed in Kiel, reviewed and corrected by hand during the next fieldwork, brought back to Kiel to be incorporated in the Teop Language Corpus as ELAN[4] and PDF files, and in the Toolbox[5] lexical data base, and eventually brought back or sent

[4]ELAN is an annotation tool for audio and video recordings developed by the Max-Planck Institute für Psycholinguistics (https://archive.mpi.nl/tla/elan), see also Barth & Schnell (2022: 102-105).

[5]Toolbox is a data management and analysis tool for field linguists that has been developed by SIL (https://software.sil.org/toolbox/), see also Meakins et al. (2018: 177). The Teop Toolbox lexical data base has been organized and cared for by Marcia Schwartz from 2000 to 2007,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

to the Teop people as books printed in Germany (Mosel, Kamai, Magum, Maion, Tavagaga, et al. 2007; Mahaka et al. 2010).

3. Because of the Teops' bad experiences with foreigners, neither I nor the Teop team members could ask the speakers to sign "a participant consent form" (Meakins et al. 2018: 37-38). I also refrained from asking personal questions about clan membership, social status, or education, so that the metadata of TLC documents do not conform to the ideals of digital archives (Meakins et al. 2018: 76).

During my first two field trips in 2003 my host Ruth Sima Rigamu and the teacher and graphic artist Neville Vitahi introduced me to seven Teop villages and helped me to explain and discuss our documentation project. Simultaneously they organized our local research team, so that we could do the first recordings and transcriptions of spontaneously spoken folktales, stories about the Teop history, and descriptions of traditional customs and practices. By the end of our second fieldwork in 2003, it became clear that the transcriptions needed to be supplemented by edited versions, because the transcriptions are neither suitable as reading materials for school children nor a pleasure to read for any readers other than linguists (Mosel 2004, 2024). But for linguists the edited texts and their oral originals show what kind of lexical and grammatical changes the editors made when they transformed oral texts into written ones and thus created a new register in a language which previously lacked written folk tales, historical narratives, and descriptions of the environment, artefacts and crafts (Mosel 2015).

In March 2004, the Teop team - Enoch Horai Magum, Joice Maion, Naphtali Maion, Ruth Sima Rigamu and Neville Vitahi - decided to record more folktales, and transcribe and edit them for a primary school reader, but also to continue the recording of texts about the history and the traditional culture of the Teop people, because elderly people were keen to transmit their knowledge to future generations. From 2005 onwards the team members felt confident in writing Teop texts without doing recordings and transcriptions. The edited and written texts were proof-read by the teachers Jubilee Kamai and Ondria Tavagaga. In the following years we published a school book with 40 folktales (Mosel, Kamai, Magum, Maion, Tavagaga, et al. 2007), a small book on house building (Mahaka et al. 2010), a bilingual history book (Mosel 2014a), and much later the Multifunctional Teop-English Dictionary, abbr. MTED, in which short encyclopedic texts were included

whereas Jessika Reinig and Yvonne Thiessen worked as research assistants on the annotation of the Teop texts in ELAN from 2000-2003 and 2000-2007, respectively. The Teop phonology was analyzed and described by Alexander Radtke (2005).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 1: Launch of the school book on house building

as "examples" with translations, see Mosel (2019). The Teop texts of this volume are of three types:

1. originally oral texts whose speaker figures as the first author, whereas the editor figures as the second author;
2. texts that were written and edited in team work; the first author is the one who wrote the first version, whereas the second author did most of the editorial work;
3. texts that have been written and edited by the same author.

The translations were always done in teamwork. They were either done by the Teop author or the editor, and then explained to me, or I did the translation with the help of the author, the editor or my host Ruth Sima Rigamu, but as the final editor of this volume I carry the responsibility for all translations.

From a corpus linguistic perspective, the Teop Language Corpus (TLC), and in particular this text collection is a so-called opportunistic corpus without a specified sampling frame (Mosel 2018: 250).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

3 The content and the structure of this volume

The Teop texts and their English translations are presented in two forms. Part II to Part V present the chapters on plants, house building, canoes and fishing techniques as bilingual texts in two columns with photographs and drawings. Each of these four parts is introduced by a short chapter which summarizes its content and gives some background information with references to the anthropological literature and to related dictionary entries in the MTED.

Part VI contains the same texts and their translations, but in addition provides a morphological word-by-word segmentation of the Teop text with a linguistic glossing of each segment. If the free English translation is markedly different from its Teop source with respect to its syntax and phraseology, a literal translation is added in footnotes, so that the Teop text, its morphological segmentation, glossing, and free translation are presented in four lines, see below:

Three words of line (5:148)			
Teop text	*teo vuri nahu*		
Word division	te=o	vuri	nahu
Glossing	PREP=ART3.SG	time	cook
Free translation	when they cook them.[6]		

If you have the PDF-version of this book and find a quotation like "see (5:148)", you can simply click this reference and then find it in its context. The first number links to the chapter in Parts II-V, while the second number links to the glossed text in Part VI.

4 Bibliographic data of the text collection

For each chapter of this volume, Table 2 below lists the labels of the text in the Teop Language Corpus (TLC) and the examples in the Multifunctional Teop-English Dictionary (MTED), two dates, and a word count for each text. If the chapter represents the edited version (E) of an oral text, the first date refers to the recording (wav), and in the case of a written text (W) it refers to the production of the manuscript (ms). The second date refers to the production of the ELAN text in both cases.

Most chapters consist of a text that is the same as the one in the TLC. The exceptions are Chapters 13, 14, and 23 which are excerpts from descriptions that Ruth Sima Rigamu wrote for the MTED.

[6] lit. 'at the time (of) cook(ing)'

Chapter 3

The basic linguistic features of the Teop language

Ulrike Mosel

1 Introduction

Teop is a configurational language. The building blocks of clauses are eight types of phrases which are formed by content words and specific functional words in a strict word order[1], see (1).

(1) *A ba suburaara na kuukuhi overe ni roho bona kehaa.*
A ba subu-raara na kuu-kuhi
[ART2.SG KIN.PL grandparent-1PL.IN.POSS.PRON]$_{NP}$ [TM2 RED-grate
overe ni roho bona kehaa
coconut APPL before]$_{VC}$ [OBJ.ART2.SG shell]$_{NP}$
'Our grandparents grated coconuts with a shell.' (5:75)

The eight types of phrases are distinguished in the following way:

1. Noun Phrase (NP): The NP is introduced by an obligatory Article signifying the lexical class of the NP head, which is distinct from its word class, and the specificity of its reference, its grammatical number, and its syntactic function. The head of the NP may be a Noun (N), a Verb (V), or an Adjective (Adj).

[1]The terms of Teop formal categories of words, phrases and clauses are distinguished from terms for typological comparative concepts, see Haspelmath (2016), and terms of syntactic, semantic, and pragmatic categories by initial capital letters, e.g. topical subject Noun Phrase.

Ulrike Mosel. 2026. The basic linguistic features of the Teop language. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 17–63. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

2. Locative Phrase (LocP): The LocP has the same structure as the NP, but lacks an Article. It is headed by a Noun that refers to a specific place.

3. Verb Complex (VC): The first position of the VC is optionally held by one of the eight particles that signify temporal relations and modality (Gloss: TM1 - TM8) and its last position by the Imperfective or the Perfective Aspect Marker (Gloss: IPFV, PFV). Affirmative VCs are headed by a Verb (V), a Noun (N), an Adjective (Adj), or a Cardinal Numeral (Num). In addition, the core of a VC that is negated by the Double Negator may consist of a Noun Phrase (NP), a Prepositional Phrase (PrepP) or a Linker Phrase (LnkP), See Section 4.2 and Section 7.1.

4. Adjectival Phrase (AdjP): The AdjP is marked by an Article that formally agrees with the Article of the NP it relates to as a predicate or an attribute. It is headed by an Adjective (Adj) or a Verb (V).

5. Numeral Phrase (NumP): The NumP is headed by a Cardinal Numeral and marked by an Article that formally agrees with the Article of the NP it relates to in the function of an attribute or anaphoric argument.

6. Substitute Phrase (SubstP): The SubstP is marked by an Article and headed by *vuaba* 'one' or *meha*/*meho* 'other' and functions as an anaphoric substitute for a NP. The selection of the Article and the form *meha* or *meho* is determined by its antecedent.

7. Prepositional Phrase (PrepP): The PrepPs are introduced by a preposition which is followed by a Pronoun or NP. The most frequent preposition is the Multi-Purpose Preposition *te* PREP.

8. Linker Phrase (LnkP): The LnkP is introduced by the Linker *vaa* (LNK) which is followed by an Adverb (Adv), a LocP, a PrepP introduced by *te* (PREP), or a complement clause introduced by *tea* (COMPL1).

The following grammatical description of Teop starts with syntactically simple Non-Verbal Clauses (Section 2) and Verbal Clauses (Section 3), which is followed by an overview of the syntactic functions of phrases in Section 4, Then the classification of the content words and Numerals is presented in Section 5 on the basis of their distribution within the phrases. The morphology of content words is described in Section 6. The following sections deal with the complex structures of VCs (Section 7) and NPs (Section 8). The forms and syntactic functions of Pronouns are listed in tables and explained in Section 9. The final two sections are

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

about the Alienable and Inalienable Possessive Constructions (Section 10) and dependent clauses (Section 11).

The Teop phonology and orthography have been described by Radtke (2005).

Information on inflectional and derivational morphemes, grammatical particles and constructions on phrase level is also given in the Multifunctional Teop-English Dictionary (MTED), Mosel (2019), which facilitates filtered searches for lexemes, parts of speech, meaning descriptions, bound morphemes, glosses, multi-word constructions, and semantic domains. An introduction to complex filtered search strategies is given in Section 12.

2 Non-Verbal Clauses

There are four types of Non-Verbal Clauses:

1. Existential clauses consist of a single NP and state the existence of the NP referent (2a).

2. In topic-comment clauses, a topical subject NP (3), Pronoun, anaphoric NumP or SubstP (2b, 6) is followed by a predicative NP (3), AdjP (4), LocP (2b) or PrepP (6).

3. In thetic[2] non-verbal clauses the non-topical subject form follows the predicate form (5).

4. The negative existential clause is formed by the Negator ahiki 'not exist' and a non-specific NP (7).

The text excerpt below starts with a PrepP referring to the topic which is followed by an existential clause and two topic-comment clauses with predicative LocPs, see (2).

(2) a. *Teo potee, o buaku koa o vanai,*

te-o	potee	o	buaku	koa	o	
[PREP=ART3.SG	potee]$_{PrepP}$	[[ART3.SG	two	only]$_{NumP}$	ART3.SG	
vanai						
outrigger.boom]$_{NP}$						

'As for the *potee* canoe, there are only two outrigger booms,'[3]

[2] Lambrecht (1994: 137-146), Sasse (1987).

[3] NPs with an attributive NumP are always singular.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

b. *o peho matana, o meho he itao.*
o peho mata-na o meho
[ART3.SG one3.SG]$_{NumP}$ [front-DEREL]$_{LocP}$ [ART3.SG other3.SG]$_{SubstP}$
he itao
ADVERS [stern]$_{LocP}$
'one near the bow, and the other near the stern.' (24:44)

In (3) a NP functions as the subject and a second NP as the predicate. The latter is modified by an attributive AdjP, see (3).

(3) *A goroto a iana a beera sana.*
A goroto a iana a beera sana
ART2.SG turtle ART2.SG swimming.animal ART2.SG big very
'The turtle is a very big swimming animal.' (26:2)

AdjPs may also function as a predicate, see (4).

(4) *O atovo o mataa,*
O atovo o mataa
ART3.SG sago.palm ART3.SG good
'The sago palm is good,' (6:54)

The ambiguity of NP-AdjP constructions is resolved by the context or by *vai* DEM6 which links the attributive AdjP to the NP, see (26) in Section 4.2.

In thetic clauses, which focus on the whole situation and lack a topical NP, the predicative AdjP precedes the non-topical subject NP, see (5).

(5) *A pereperee ge kasikasiree a kapa nae.*
a pereperee ge kasikasiree a kapa nae
ART2.SG green or yellow ART2.SG cover 3SG.POSS.PRON
'(When it grows bigger, they call it *magura* 'ripening coconut.') Its cover is green or yellow.' (5:38)

A predicative PrepP is found in the description of making a net for catching turtles,[4] see (6).

(6) a. *O peho teo meho punete,*
O peho te=o meho punete
[ART3.SG one3.SG]$_{NumP}$ [PREP=ART3.SG other3.SG edge]$_{PrepP}$
'One (is) for one edge,'

[4]A predicative PrepP introduced by *mene* occurs in (16:37).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

b. *o meho he teo meho punete.*
o meho he te=o meho
[ART3.SG other3.SG]$_{SubstP}$ ADVERS [PREP=ART3.SG other3.SG
punete
edge]$_{PrepP}$
'(When this work is finished, we get two helmet shells for the bottom of the net.) the other (is) one for the other edge.' (27:28)

Negative existential clauses are formed by the Negator *ahiki* 'not exist'[5] and a NP marked by a Non-Specific Article (see Section 8.2). The example below comes from a text about a pandanus species, see (7).

(7) *Ahiki to toutou teve.*
Ahiki to toutou teve
not.exist [NSPEC3.SG thorns PREP.3.SG.PRON]$_{NP}$
'It does not have any thorns.' (lit. 'There aren't any thorns of it.') (13:18)

Predicative NPs and PrepPs are negated by the verbal Double Negator Construction, see Section 4.2. Predicative AdjPs are negated by a VC which is marked by the Double Negator and headed by the AdjP, compare (4) with (20:10).

3 Verbal Clauses

In topic-comment Verbal Clauses, the VC follows a clause initial topical NP, Pronoun, or anaphoric phrase which in transitive clauses may function as the subject or the object. Topical NPs and non-topical subject NPs are marked by a Basic Article. But non-topical object NPs are only marked by the Basic Article (See Section 8.2), if the topical subject is formed by a 1st or 2nd person Pronoun, see (8).

(8) *Eara repaa karem vakakaniva a peha papana.*
e-ara re= paa karem va-kakaniva a peha
H-1PL.IN.PRON CONSEC= [TM3 scrape CAUS-sharp]$_{VC}$ ART2.SG one2.SG
papana
end
'Then we sharpen one end.' (5:55)

But if an NP or a 3rd person Pronoun functions as the topical subject, the object NP is marked by the Object Article, see (9).

[5]The Negator *ahiki* 'not being there' can be analyzed as a NP formed by the Article *a* (ART2.SG) and the Verb *hiki* 'not exist, not have', https://dictionaria.clld.org/units/teop-hiki_1, but it is never written as two words.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(9) *A abana na mosi maari bono kopihoo ...*
A abana na mosi maa=ri bono kopihoo
ART2.SG men [TM2 cut hither=3PL.IPFV]$_{VC}$ OBJ.ART3.SG kopihoo
'The men cut a *kopihoo* tree ...' (23:3)

When the topical NP functions as the object, the subject NP or Pronoun follows the VC, see (10).

(10) *O kaku vagana bona na pakupaku raara teo gohoho ge teo tarahi,*
O kaku vagana bona na paku=paku ra=
[ART3.SG kind fish ANA.SG]$_{NP}$ [TM2 RED=do 1PL.IN.IPFV=]$_{VC}$
ara te=o gohoho ge te=o tarahi
1PL.IN.PRON PREP=ART3.SG in-coming.tide or PREP=ART3.SG ebbing.tide
'This kind of fishing we do during the in-coming tide or during the ebbing tide,' (30:3)

Ditransitive clauses are frequent in this text collection, because in Teop the primary and secondary object NPs do not only refer to the recipient and the theme of a transfer,[6] but also to the patient and the instrument of an action or the product of an action and the material it is made of. The structure of ditransitive clauses is summarized in Table 1.

Table 1: Ditransitive clauses with a topic-comment structure.

TOPIC	VC	NON-TOPICAL ARGUMENTS		REF
subj: H-1PL.IN.PRON	VC_{DTR}	1st obj: ART N	2nd obj: OBJ.ART N	(11)
subj: H-3PL.PRON	VC_{DTR}	1st obj: OBJ.ART N	2nd obj: OBJ.ART N	(12)
1st obj: ART N	VC_{DTR}	subj: 1PL.IN.PRON	2nd obj: OBJ.ART N	(13)
2nd obj: ART N	VC_{DTR}	subj: 3PL.PRON	1st obj: NP	(14)

The primary object NPs are treated like the object NP of transitive clauses. It is marked by the Basic Article, if the topical subject is formed by a 1st or 2nd Person Pronoun, see (11).

(11) *..., eara na tasu rara a koopu bona toraara.*
e-ara na tasu rara a koopu bona toraara
H-1PL.IN.PRON TM2 beat 1PL.IN.IPFV ART3.PL bamboo OBJ.ART2.SG axe
'..., we beat the *koopu* bamboos with an axe.' (19:21)

[6] Cf. Malchukov et al. (2010: 1-2). For examples of *hee* 'give' see Mosel (2010: 487-500) and https://dictionaria.clld.org/units/teop-hee

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

But if the topical subject is formed by a 3rd Person Pronoun or a NP, the primary object NP is marked by the Object Article, see (12).

(12) *..., eori repaa kahu mana bono kara baneo bona kehaa*
e-ori re= paa kahu mana bono kara
H-3PL.PRON CONSEC= [TM3 scrape eventually]$_{VC}$ OBJ.ART3.SG fibre
baneo bona kehaa
breadfruit_tree OBJ.ART3.SG shell
'they eventually scrape the breadfruit tree fibres with a shell (that they call *sui*).' (8:20)

The Basic Article only marks non-topical secondary object NPs, if both the subject and the primary object are formed by a 1st or 2nd Person Pronoun.[7]

When the primary object functions as the topic, the subject is formed by a Pronoun that directly follows the VC and the secondary object NP is marked by the Object Article irrespective of the person of the subject Pronoun, see (13).

(13) *O pusu hiovu na paku raara bene ta boon.*
O pusu_hiovu na paku ra= ara bene
ART3.SG husker [TM2 make 1PL.IN.IPFV=]$_{VC}$ 1PL.IN.PRON OBJ.ART1.SG
ta boon
piece mangrove
'We make the husker from a piece of mangrove wood.' (lit. 'The husker make we') (5:52)

The same clause structure is found with secondary object NPs functioning as the topic, see (14):

(14) *O pihae vai o pereperee na paku riori bona bero a taba.*
O pihae vai o pereperee na paku
ART3.SG coconut.frond DEM6 ART3.SG green TM2 make
ri=ori bona bero[8] a taba
3PL.IPFV=3PL.PRON OBJ.ART2.SG many ART2.SG thing
'The green coconut frond is used for many things.' (lit. '... make they many things.') (5:100)

[7] There is no example in this text collection where both the subject and the primary object are formed by a 1st or 2nd person Pronoun, but see *Ean toro hee anaa a moon.* 'You must give me the girl.' in Mosel (2010: 490).

[8] The word *bero* 'many' heads a NumPs in (14), but it also functions as the head of a VC, see (13:8), the head of an AdjP, see (26:16), and the head of a NP, see (16:12).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Thetic verbal clauses lack a topical argument as they introduce a new participant into the discourse or focus on the whole situation. Consequently, the arguments follow their VC, see (15).

(15) *Evehee na teitei batana a sii vapara nae.*
evehee na tei-tei bata=na a sii vapara
but TM2 RED-be.there CONT=3SG.IPFV ART2.SG DIM partner
nae
3SG.POSS.PRON
'But usually there is its partner.' (35:12)

Clauses may lack subject and object NPs or Pronouns, if the context provides sufficient information to identify who or what is talked about, see Table 22.

4 The syntactic functions of phrases

The description of the syntactic functions of phrases is divided into two sections: Section 4.1 describes their functions as immediate clause constituents and Section 4.2 describes their functions as subordinate constituents of other phrases. Clause external topics are formed by NPs (24) and PrepPs (2).

4.1 Phrases functioning as immediate clause constituents

Seven types of phrase function as immediate constituents of clauses, see Table 2.

Table 2: Phrases functioning as immediate clause constituents.

PHRASE	FUNCTION AS IMMEDIATE CLAUSE CONSTITUENTS			
	PREDICATE	SUBJECT/OBJECT	OBLIQUE	ADJUNCT
VC	(1), (8)ff	-	-	-
NP	(2)	(1), (3), (4), (5), (8)ff	-	-
AdjP	(4), (5)	-	-	-
LocP	(2)	-	(16)	(1)
PrepP	(6)	-	(17)	(10)
anaphoric NumP	-	(2), (6), (6:35)	-	-
anaphoric SubstP	-	(2), (6), (29:72)	-	-

VCs only function as predicates. They are typically, but not obligatorily marked by particles that signify temporal relations, modality and aspect, see Section 7.4

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

and Section 7.5. All other phrase types have more than one function. For the predicative function of NPs, AdjPs, LocPs and PrepPs see Section 2.

NPs function as topical and non-topical subjects of Non-Verbal Clauses, see Section 2, and in Verbal Clauses as topical and non-topical subjects and objects, see Section 3.

Anaphoric NumPs and SubstPs function as topical subjects and non-topial objects.

LocPs and PrepPs function as predicates and as oblique objects that are governed by a VC headed by *tei* 'be somewhere' or by a VC with the incorporated Preposition *vo1* 'to' or *vo2* 'like'.

Oblique objects formed by LocPs or PrepPs typically depend on VCs headed by *tei* 'be somewhere', see (16).

Oblique objects are governed by a VC headed by *tei* 'be somewhere' and by a VC with the incorporated preposition *vo*^{1} 'to' or *vo*^{2} 'like', and are expressed by an Adverb, LocP, or a PrepP. The LocPs or PrepPs governed by *tei* 'be somewhere' refer to any kind of location, be it inside a coconut (5:7) or in the jungle, see (16).

(16) *O kara kuskus na tei nana rasuu,*
O kara_kuskus na tei nana rasuu
ART3.SG passionflower [TM2 be.there 3SG.IPFV]$_{VC}$ jungle
'The passionflower is found in the jungle.' (11:39)

VCs marked by the incorporated preposition *vo* GOAL are mostly headed by a Verb denoting a kind of motion, see (17).

(17) *ore paa kuu gunaha vo maa teo kasuana.*
o=re paa kuu gunaha vo maa te=o
3PL.PRON=CONSEC [TM3 fall go.down GOAL hither]$_{VC}$ PREP=ART3.SG
kasuana
ground
'(When the coconut has become dry high up on a standing coconut palm,) then it falls down to the ground.' (5:3)

The incorporated preposition *vo*^{2} 'like' is most frequently found with the cataphoric adverb *en* 'this' (DEM3) and the anaphoric PrepP *tee=bona* 'this' (PREP=ANA.SG). Typical examples are (5:23) and (5:45).

4.2 Subordinate phrases

VCs and the anaphoric NumPs and SubstPs are not found in subordinate functions, but all other phrases occur as subordinate phrases that are either embedded

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

in the superordinate phrase or juxtaposed to it Table 3 below shows the distribution of six phrase types across six subordinate functions. A special phrase type is the Linker Phrase (LnkP) which only functions as a subordinate constituent . The subordinate functions of phrases are:

- the core of a VC, see (34) in Section 7.1;
- the juxtaposed modifier of a Verb or Noun;
- the attribute of a NP;
- the inalienable possessor NP, see Section 10;
- the complement of a Preposition in a PrepP;
- the complement of the Linker of a LnkP

Table 3: Subordinate Phrases.

PHRASE	FUNCTIONS AS SUBORDINATE CONSTITUENTS					
	CORE OF VC	MOD. OF V OR N	ATTR. OF NP	INALIEN. POSSR	COMPL. OF PREP	COMPL. OF LINKR
NP	(18)	-	(25)	(23), (25)	(19)-(22), (24)	-
AdjP	-	-	(3), (14), (26)	-	-	-
NumP	-	-	(2)	-	-	-
LocP	-	-	-	-	-	(23)
PrepP	(19)	-	(22), (24)	-	-	(20)-(22)
LnkP	(20)	(21)-(23)	-	-	-	-

NPs and PrepP that function as the predicate of a non-verbal clause can be negated by the Double Negator *sa(ka) ... haa* (NEG1 ... NEG2) and then function as the core of a VC. In a text about poisoning fish with roots, the author emphasizes that they use many roots, see (18).

(18) *Saka o peho ana haana to tasu raara,*
Saka o peho ana haa=na to tasu
[NEG1 ART3.SG one3.SG root NEG=3SG.IPFV]$_{VC}$ REL beat
ra=ara
1PL.IN.IPFV=1PL.IN.PRON,
'It is not a single root that we beat (and throw into the pool), ...' (37:15)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Similarly, a PrepP functions as the core of a negated VC to emphasize that turtle netting is not done at the edge of the reef, see (19).

(19) *ei saka tea irihi haana,*
ei saka te=a irihi haa=na
DEM2 [NEG1 [PREP=ART2.SG edge.of.reef]$_{PrepP}$ NEG2=3SG.IPFV]$_{VC}$
'(We know the place where the net is thrown or where the turtle netting is done,) this (is) not at the edge of the reef, ...' (28:11)

Thirdly, a LnkP with a PrepP as its complement holds the position of the core of an affirmative VC and means 'be like sth.', see (20)

(20) *A kokoroto na vaa tea ahio nana,*
A kokoroto na vaa te=a ahio nana
ART2.SG kokoroto TM2 LNK PREP=ART2.SG ahio 3SG.IPFV
'The *kokoroto* is similar to the *ahio* lizard (but the *ahio* is green, while the *kokoroto* is brown.)' (See https://dictionaria.clld.org/units/teop-kokoroto)

In this text collection the LnkP is used as a modifier of a Verb, see (21),

(21) *o sii vahara vasu beori ravun vaa tea vaakororovi rori.*
o sii vahara vasu beori ravun vaa
ART2.PL DIM small.PL stone when=3PL.PRON be.heaped.up LNK
te=a vaakororovi rori
PREP=ART2.SG circle 3PL.IPFV
'(When we are about to catch wrasses, we search for) little stones being heaped up in a circle.' (35:6)

or as a modifier of a Noun[9], see (22).

(22) *O paranda o peho taba vaa tea inu teara ...*
O paranda o peho taba vaa te=a inu
ART3.SG floor ART3.SG INDEF3.SG thing LNK PREP=ART2.SG house
te=ara
PREP=1PL.IN.PRON
'The floor is a thing in our house, ...' (20:1)

Similar to the PrepP in (22), LocPs are linked as a modifier to a Noun, see (23).

[9] In (5:180) *mene vaanoto suraa vaa tea taotao* 'in order to light the fire for baking (food) in the earth oven' the LnkP modifies the Noun *suraa* 'fire' which functions as the complement of the transitive verb *vaanoto* 'light'.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(23) *a vana vaa komana overe*
a vana vaa koma-n=a overe
ART3.PL germinating.leaf LNK inside-3SG.POSS=ART2.SG coconut
'the germinating leaves inside the coconut' (5:24)

In NPs referring to the stages of work processes, the Linker connects a Complement Clause to the head, e.g. *a kiu vaa tea* V... 'the work of doing V', see Section 11. When a PrepP introduced by *te* (PREP) directly follows a NP as its attribute, it always refers to an alienable possessor, see (24).

(24) *A kara bao, eve a tabaan teo burumakao.*
A kara bao eve a tabaan te=o burumakao
ART3.PL string grass 3SG.PRON [ART2.SG food PREP=ART2.PL cow]$_{NP}$
'Grass is the food of cows.' (11:11)

In the Inalienable Possessive Constructions (23) and (25), the head Noun is marked by the suffixed Possessive Marker (POSS) which indexes the person and number category of the following possessor NP, see Section 10. Attributive NPs modify the meaning of a preceding NP marked by *vai* 'this' (DEM6), see (25).[10]

(25) *O naono vai o kopihoo na paku riori bono aga no sinivi.*
o naono vai o kopihoo na paku ri=ori
ART3.SG tree DEM6 ART3.SG kopihoo TM2 make 3PL.IPFV=3PL.PRON
bono aga n=o sinivi
OBJ.ART3.SG float 3SG.POSS=ART3.SG canoe
'The *kopihoo* tree is used for making the float of the outrigger canoe.' (23:2)

NPs followed by an attributive AdjP are optionally marked by *vai* 'this' (DEM6) to distinguish the attriutive AdjP from the predicative one, see (26), and compare it with (4) above.

(26) *A koopu vai a mataa ae bebeahu na teitei nana rasuu.*
a koopu vai a mataa ae bebeahu na tei-tei
ART3.PL bamboo DEM6 ART3.PL good and1 long TM2 RED-be.there
nana rasuu
3SG.IPFV jungle
'The good and long *koopu* bamboos are in the jungle.' (19:6)

[10]Similar examples are (6:2) and (7:4)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

5 The classification of content words and Numerals

5.1 Introduction

This section deals with Nouns (N), Verbs (V), Adjectives (Adj), Cardinal Numerals (Num)[11] and Manner Adverbs (Adv) that are derived by the prefix *va-* ADVR. Their classification is based on the combination of two criteria:

1. their function as heads of VCs, NPs, AdjPs, and NumPs;
2. their compatibility with directly following content words as their modifiers.

LocPs are not considered in this section, because they are exclusively headed by Nouns referring to a specific place. A special subclass of Nouns which denote specific kinds of plurality are dealt with in Section 8.3. The most frequent Noun of this kind is the Pluralmarker *maa* (PLM) denoting distributional plurality. For details of the distinction of Teop Nouns, Verbs, and Adjectives see Mosel (2017), for lexical flexibility in Oceanic languages van Lier (2016), and for word classification in Austronesian languages Mosel (2023).

5.2 The function of content words and Numerals as phrasal heads

Verbs and Adjectives occur as the head of VCs, NPs, and AdjPs, whereas Nouns only head VCs and NPs. But Verbs differ from Adjectives in their selection of modifiers, see Section 5.3. Cardinal Numerals function as the head of VCs and NumPs. Adverbs are not found in the position of a phrasal head, see Table 4.

Table 4: Content words and Numerals functioning as the head of VCs, NPs, AdjP, and NumPs.

WORD CLASSES	VC	NP	ADJP	NUMP
V	(27b)	(27a), (28), (29)	(30b), (38)	-
N	(31)	(28), (27b)	-	-
Adj	(28)	(81b)	(30a), (81a)	-
Num	(32)	-	-	(27a), (33)

NPs headed by a Verb have the same syntactic properties as NPs headed by a Noun with respect to attributive NumPs, see (27).

[11] Other Numerals are derived from Cardinal Numerals, e.g. *vaa-buaku* 'second' (20:18), *bubuaku* 'in pairs', and *va-buaku* 'two together' (29:63).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(27) a. *A kukan bau gea dorana a hovu,*
A kukan bau ge=a dorana a hovu
[ART2.SG three perhaps or=ART2.SG four]$_{NumP}$ [ART2.SG husk]$_{NP}$
'Perhaps three or four husking movements, and then the coconut is completely husked.'

b. *a overe repaa tahovu vakavara.*
a overe re=paa ta-hovu va-kavara
ART2.SG coconut CONSEC=TM3 ACAUS-husk ADVR_complete
'(and) then the coconut is completely husked.' (5:62)

When the NP head is formed by a transitive Verb, it functions as the possessum of an Inalienable Possessive Construction (Section 10), see (28).

(28) *A koro no komano sinivi potee na varuruva koana*
A koro n=o koma-n=o sinivi
[ART2.SG carve.out 3SG.POSS=ART3.SG inside-3SG.POSS=ART3.SG canoe
potee na varuruva koa=na
potee]$_{NP}$ [TM2 easy just=3SG.IPFV]$_{VC}$
'The carving of the inside of the *potee* canoe is quite easy.' (24:14)

But within the NP, a Verb is modified by an Adverb and not by an Adjective, see (29).

(29) *ahiki ta popo vatamaka*
ahiki ta popo va-tamaka
not.exist NSPEC2.SG live ADVR-live
'there was not any sad life' (See https://dictionaria.clld.org/units/teop-vatamaka)

Similarly, Verbs heading an AdjP are modified by adverbs as, for instance, *kare* 'recently', see (30).

(30) a. *O baneo vai o visoasi,*
O baneo vai o visoasi
ART3.SG breadfruit_tree DEM6 ART3.SG young
'The young breadfruit tree'

b. *o baneo vai o kare pura,*
o baneo vai o kare pura
ART3.SG breadfruit_tree DEM6 [ART3.SG recently grow]$_{AdjP}$
'is a breadfruit tree that has only recently started growing, ...' (8:1)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Nouns heading a VC are modified by Adjectives, see (31).

(31) *O naono vai o sinivi na taba beera kurusu kiri nana bona tavaan,*
O naono vai o sinivi na taba beera kurusu
ART3.SG tree DEM6 ART3.SG sinivi [TM2 thing important very
ki=ri nana bona tavaan
DAT=3PL.OBJM 3SG.IPFV]$_{VC}$ OBJ.ART2SG people
'This canoe tree is a very important thing for the people, ...' (7:4)

Adjectives function as the head of AdjPs (30a), VCs (28), and Inalienable Possessive NPs, see Section 10.

Cardinal numerals function as the head of VCs, see (32),

(32) *Enam paa dorana vaevuru.*
e-nam paa dorana vaevuru
H-1PL.EX.PRON TM3 four already
'We were already four.' (See https://dictionaria.clld.org/units/teop-dorana)

and as the head of NumPs functioning as an attribute or an anaphoric argument, see (33).

(33) a. *Teo dorana o pakapaka,*
Te=o dorana o pakapaka
PREP=ART3.SG four ART3.SG flipper
'As for the four flippers (of the turtle),'

b. *o buaku vaa kahoo nae na dao raara bono huahua.*
o buaku vaa kahoo nae na dao
ART3.SG two LNK head- 3SG.POSS.PRON TM2 call
ra=ara bono hua-hua
1PL.IN.IPFV=1PL.IN.PRON OBJ.ART3.SG RED-paddle
' the two near its head, we call paddles.' (26:6)

In (33b) the NumP *o buaku* 'the two' is classified as an anaphoric NumP functioning as a topical primary object, because the selection of its Article *o* ART3.SG is determined by the head of the preceding NP *o dorana o pakapaka* 'the four flippers'.

5.3 The modification of content words by other juxtaposed content words

The term modifier is used for content words that directly follow another content word and characterize the concept denoted by the preceding word. Not considered as modifiers are content words functioning as a secondary predication,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

e.g. *avuhu mataa* 'smell good' (5:139), or as a juxtaposed complement of a relational Noun, e.g. NN: *kaku vagana* 'kond of fishing' (10), or a transitive Verbs, e.g. VN: *paku sinivi* 'make (a) canoe' (7:14), VV: *vaanagu koava* 'resist rotting' (16:8), VNum: *gae kukan* 'lift three (bamboo strips)' (19:35). Verbs, Nouns, Adjectives and numerals are distinct from one another with respect to their modification by content words. While Numerals do not have any modifiers, Verbs, Nouns and Adjectives differ in their selection of modifying content words, see Table 5.

Table 5: The compatibility of Verbs, Nouns and Adjectives with juxtaposed modifiers.

	Modifiers			
	V	N	ADJ	ADV
V	(5:3)	(22:23)	-	(10:30)
N	(16:1)	(5:20)	(7:4)	-
Adj	(30:18)	-	-	(27:14)

Verbs can be modified by Verbs, Nouns and Adverbs, see Table 6.

Table 6: The modification of Verbs.

	TEXT	GLOSS	TRANSLATION	REF
V - V	*kuu gunaha*	fall go.down	'fall down'	(17)
V - N	*paku vaagum*	do group	'do sth in a group'	(22:23)
V - Adv	*pura va-mataa*	grow ADVR-good	'grow well'	(10:30)

Nouns only differ from Verbs in being modified by an Adjective instead of an Adverb, see Table 7.

Table 7: The modification of Nouns.

	TEXT	GLOSS	TRANSLATION	REF
N - V	*inu goro-goroho*	house RED-sleep	'sleeping house'	(16:1)
N - N	*paka overe*	leaf coconut.palm	'coconut leaf'	(5:20)
N - Adj	*taba beera*	thing big/important	'important thing'	(31)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Similar to Verbs, Adjectives are modified by Verbs and Adverbs, but it is only the three verbs *oha* 'exceed,' *potee* 'be like,' and *vaapeha* 'be the same' and a few adverbs. In contrast to Verbs, AdjPs are not modified by Nouns, see Table 8.

Table 8: Adjectives modified by Verbs and Adverbs.

	TEXT	GLOSS	TRANSLATION	REF
Adj - V	*beera oha*	big exceed	'bigger than'	(30:18)
	beera potee	big be.like	'as big as'	(24:5)
Adj-Adv	*bebeahu va-antee*	long ADVR-enough	'long enough'	(27:14)
	paru va-pereperee	black ADVR-green	'greenish black'	fn[12]

The selection of modifiers is independent of the syntactic function of the modified content word. In (29) the Verb *popo* 'live' heads a NP and is modified by the adverb *vatamaka* 'sadly', and in (31) the prototypical Noun *taba* 'thing' functions as the head of a VC and is modified by the Adjective *beera* 'big, important'.

6 The morphology

The inflectional morphology is restricted to the Articles (Section 8.2), the Numerals *peha*[1]/*peho*[1] 'one' and bua/buo 'two', the Indefinite Determiner *peha*[2]/*peho*[2], the Determiner *meha*/*meho* 'other, some' within the NP (Section 8.4), to the person forms of the Object Marker (Section 7.1) and the Imperfective Aspect Marker in the VC (Section 7.5), and to the Pronouns (Section 9) and the Possessive Marker in Inalienable Possessive Constructions (Section 10).

The derivational morphology is restricted to seven affixes and reduplication:[13]

- ACAUS- : the Anticausative prefix *ta-* derives intransitive Verbs from transitive ones.
- -ADJR: the suffix *-ana* derives Adjectives from reduplicated Nouns. The form RED-N-ana means 'full of N', e.g., *usu-usu-ana* 'full of lice'.

[12] https://dictionaria.clld.org/units/teop-paru_vapereperee and https://dictionaria.clld.org/units/teop-vapereperee

[13] For examples see Mosel, Kamai, Magum, Maion, Maion, et al. (2007: 258-260) or Search (Words extra) in the MTED for the Gloss. If you search for causatives, insert "^CAUS", the graph "^" means: the beginning of the entry.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

- ADVR- the Prefix *va-* derives Adverbs from Adjectives and some stative Verbs
- CAUS-: the Prefix *vaa-*, *va-* derives transitive causative Verbs and some intransitive Verbs with various meanings.
- -DEREL: the Derelational suffix *-na* derives non-relational nouns from relational nouns, see Section 10.
- MULT-: the Prefix *va-* derives Verbs denoting multiple actions, including reciprocal actions.
- ORD-: the Ordinal prefix *vaa-* derives Ordinal Numerals from Cardinal Numerals.
- RED-: Reduplication signifies various kinds of plurality and derives Adjectives from Nouns or other adjectives, e.g. *pereperee* 'green' from *peree* 'unripe'.

In accordance with the multifunctionality of Verbs and Nouns, Teop lacks morphemes that derive Nouns from Verbs or Verbs from Nouns.

7 The Verb Complex (VC)

7.1 Introduction

The VC is the only type of phrases that exclusively functions as a predicate, see Section 4.1. The head of canonical VCs is formed by a Verb, a Noun or an Adjective; for non-canonical VCs see Section 4.2. The sequential order of functional and lexical words in VCs is fixed, see (34).

(34) NEG1 TM [Adv_1 HEAD X Adv_2]$_{CORE}$ NEG2 APPL Prep OBJM Adv_3 IPFV/PFV

In (34) X stands for content words that follow the head as modifiers, complements or secondary predications, see Section 5.3 and the modifying LnkP, see Section 4.2. The abbreviations Adv_1, Adv_2, and Adv_3 indicate the three positions of Adverbs. The first position is held by *pahin* 'immediately' (22:24) or *manin* 'ever' in negated VCs, see (11:63).[14] In contrast, the second position can be held by more than one adverb, see (35).

[14]Further examples of Adverbs in this position are *pate*^{2} 'together' and *van* 'together', search for these Headwords in the MTED.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(35) *O koverau saka tau pura vatotobin tamuana bata haana.*
O koverau saka tau pura va-totobin tamuana bata
ART3.SG koverau NEG1 TM5 grow ADVR-straight always CONT
haa=na
NEG2.3SG.IPFV
'The *koverau* bamboo might not always continuously grow straight.' (10:2)

The third Adv-position can be held by *maa* 'hither' or *nao* 'thither' and roho 'before', which may occur together as in (37) *deedee maa roho* 'brought be here'.

The functional words of the VC are:

1. the Double Negator (18), (19),(35);
2. the pre-head TM-Markers signifying temporal relations and modality, e.g. *tau* TM5 (35), see Section 7.4;
3. the post-head Applicative Particle *ni* APPL signifying that the VC is transitive, see Section 7.2;
4. post-head incorporated Prepositions which increase the valency of the VC core, see Section 7.3;
5. the post-head Object Markers (OBJM) which index direct and primary object NPs and Pronouns, i.e. the uninflected Object Marker *a* OBJM (47), *ara* 1PL.IN.OBJM (43), and *ri* 3PL.OBJM (31), (39c), (68), (70);
6. the post-head Aspect Markers (IPFV, PFV) occur in the last position of the VC, see Section 7.5.

There are three kinds of Hybrid VCs:

1. a negated VC in which the core is formed by a NP or PrepPs, see Section 3;
2. an affirmative VC with a LnkP as its core, see Section 3, and
3. a VC in which the core is formed by Noun and the Demonstrative *vai* 'this' (DEM6), and then beyond its borderline followed by an modifying AdjP or Relative Clause. Examples are found in (16:11), (20:8) and (31:5).

In certain contexts such as Imperative Constructions, Adverbial Clauses, and Relative Clauses the VC may only consist of a single Verb, see (26:40), (5:4), and (75).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

7.2 The Applicative Particle

Irrespective of the valency of the VC core, the Applicative Particle marks the valency of a VC as transitive, see Mosel (2010: 493-496)[15], see (36).

(36) *A ba suburaara na booboha overe ni roho bona vasu.*
A ba subu-raara na booboha
ART2.SG KIN.PLM grandparent-1PL.IN.POSS.PRON [TM2 [[break$_{TR}$
overe ni roho bona vasu
coconut]$_{INTR}$ APPL]$_{TR}$ before]$_{VC}$ [OBJ.ART2.SG stone]$_{INS}$
'Our grandparents broke coconuts (by hitting them) with a stone, ...' (5:69)

The Applicative Particle marks the valency of a VC as transitive. In (36) the transitive Verb *booboha* 'break' is followed by *overe* 'coconut' functioning as its complement. This intransitive construction *booboha overe* 'break coconuts' is then transitivized by the Applicative Particle *ni* APPL, e.g. *booboha overe ni* 'break coconuts with s.th.'. Further examples of this frequently used construction are listed in Table 9.

Table 9: Transitive VCs of the structure V $N_{PATIENT}$ APPL $NP_{INSTRUMENT}$.

TEXT	TRANSLATION	REF
kuukuhi overe ni	'grate coconuts with (a shell)'	(1)
vaanoto suraa ni	'light fire with (the fibrous husk)'	(5:119)
vigu inu ni	'use (the sago palm) for building houses'	(6:54)
isuisuvu ruene ni	'use (the *kururu* bamboo) for fetching water'	(10:24)
paku vavaatoa ni	'do kite fishing with (*ariono* vines)'	(11:9)

If a VC is headed by the ditransitive Verb like *hee* 'give sb. sth.' and marked by *ni*, the VC is transitive, e.g. *hee hiava ni* [give go.up APPL]'reach sth. up', (6:40), (17:37).

7.3 Incorporated Prepositions

The incorporation of Prepositions in VCs is a means of increasing the valency of the VC core (see Mosel 2000). The VC is mostly headed by a Verb, see Table 10.

[15]Search (Words) in the MTED for the MWE "vi - appl" and find 123 entries with the Part of Speech "vt.constr". Then search for the MWE "vd - appl" and find 14 entries with the Part of Speech "vt.constr" .

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Table 10: VCs headed by a Verb with incorporated prepositions.

TEXT	GLOSS OF PREP	TRANSLATION	REF
neba ki	DAT	'plant sth. for (cows)'	(39c)
sue ki	DAT	'tell sb.'	(22:20)
rova kahi	from	'disappear from'	(26:34)(47)
tei me	with	'have sth.' (lit. 'be there with sth.')	(26:4)(81b)
kuu gunaha vo	GOAL	'fall down to'	(17)

But there are also examples of VCs with incorporated prepositions that are headed by an Adjective or a Noun, see Table 11.

Table 11: VCs headed by an Adjective or Noun with an incorporated preposition.

TEXT	GLOSS OF PREP	TRANSLATION	REF
mataa ki	DAT	'be good for sb.'	(16:7)
mataa suku	because.of	'be good because of sth.'	(11:72)
taba beera ki	DAT	'be an important thing for sb.'	(31)

7.4 The TM-Markers signifying temporal relations and modality

Eight prehead TM-Markers signify how the situation described by the VC is located in time with respect to some other past, present or future situation given by the context and its modality. The TM-Markers are listed below with short meaning descriptions, and their frequencies in this text collection in square brackets, see Table 12.

Table 12: The TM-markers and their meanings.

TM	GLOSS	NAME AND MEANING	NO. OF TOKENS
paa	TM3	Change-of-Situation Marker: This situation followed, will follow, or generally follows another situation.	452 tokens

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

na	TM2	Realis Marker: This situation is a fact that occurred before the utterance or before some other past situation. The construction TM2-Head-IPFV means that the situation is or was simultaneous with the present or a past situation.	234 tokens
toro	TM7	Necessity Marker: This situation is/was necessary, obligatory or inevitable.	86 tokens
kahi	TM1	Posterior Marker1: This situation is/was expected to occur.	41 tokens
pasi	TM4	Posterior Marker2: This situation is or was wanted to occur.	33 tokens
tau	TM5	Posterior Marker3: This situation is or was about to happen.	23 tokens
mene	TM6	Timitive Marker:[16] This frightening situation might happen or might have happened.	9 tokens
pari	TM8	Counterfactual Marker: This situation almost happened.[17]	no tokens

The numbers of the glosses TM1 - TM8 do not have any meaning as they were given to the particles at the beginning of the Teop language project.

The frequency and distribution of the TM-Markers in this text collection is obviously influenced by its genre, as most clauses make generic statements about plants and the stages of work processes. Even the making of the turtle fishing net that hasn't been practiced since the 1980s is described as a timeless practice. Statements about specific events of the past are rare.

The Realis Marker *na* TM2 occurs 234 times, but only four times in VCs without the IPFV Marker. Two of them are about past practices in (1) and (36). The third one is about a single past event, see (37).

(37) *O karaa vai o hiki toutou na deedee maa rohori Solomon*
O karaa vai o hiki toutou na dee-dee maa
ART3.SG pandanus DEM6 ART3.SG not.have thorns [TM2 RED-carry hither
roho ori Solomon
before]$_{VC}$ 3PL.PRON Solomon
'The pandanus without thorns was brought from the Solomon Islands.'

[16]The adjective "timitive" has been created by Palmer "for fears" (2001: 133-134) and is used by Lichtenberk in his article "Modality and Mood in Oceanic languages," (2016: 346-349).

[17]In the MTED the TM-Marker *pari* is classified as an Adverb.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(13:17)

The fourth one occurs in a procedural text in a clause about an action that was done before the current referent time, see (38).

(38) *ei kou na kaku pisi momohu ara.*
ei kou na kaku pisi momohu ara
because TM2 break fold first 1PL.IN.PRON
'(We put the bamboo strip on the ground, then we open a sago-palm leaf,) because we had folded it before.' (17:23)

Past events are also expressed by non-verbal predicates, by VCs without any TM-Marker, and by VCs that are marked by any of the other TM-Markers as, for example, the Change of Situation Marker *paa* TM3, which has the highest frequency of TM-Markers, see (39).

(39) a. *Nabunuu roho enam ahiki to kara bao.*
Nabunuu roho e-nam ahiki to kara bao[18]
in.the.past before H-1PL.EX.PRON not.exist NSPEC3.SG grass
'(Grass is the food of cows.) In the past we did not have any grass.'

b. *O burumakao he nomaa koa*
o burumakao he nomaa koa
ART2.PL cattle ADVERS come just
'But the cows came,'

c. *meori paa ma neba bata kiri bari bono kara bao.*
me=ori paa ma neba bata ki=ri bari
and4=3PL.PRON [TM3 come plant CONT DAT=3PL.OBJM]$_{VC}$ 4.PL.PRON
bono kara bao
OBJ.ART3.SG grass
'and they planted the grass for them.' (11:12-13)

A similar sequence of clauses about the past is Naphtali Maion's text about the past practice of *kaku goroto* 'butchering turtles' in (26:31-33).

The following text excerpt illustrates the changes of temporal relations and modality in four subsequent clauses. The text describes what a man should do when he has carved the hull of a canoe in the jungle and now wants some men to pull it to the village, see (40).

[18]For subordinate clauses functioning as predicates see Section 11.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(40) a. *Evehee ean toro paku a sii tabaan*
evehee e-an toro paku a sii tabaan
but H=2SG.PRON TM7 make ART2.SG DIM food
'(..., you tell some people to assist you to pull it home. This work does not cost anything,) But you should make some food'

b. *to kahi ma an koa vue o manae*
to kahi ma an koa vue o manae
REL TM1 come eat just particulary ART2.PL young.men
'that the young men will eat,'

c. *to paa nao nau tea rahi sinivi.*
to paa nao na=u tea rahi sinivi
REL TM3 go thither=PFV COMPL1 pull canoe
'who have gone there to pull the canoe.' (24:36)

Each of the four clauses of (40) has a distinct reference time that is given by the preceding context. In (40c) the Change-of-Situation Marker *paa* (TM3) signifies that the situation of going (into the jungle) follows the situation of 'you tell some people', whereas the PFV-Marker signifies that it precedes the situation of pulling the canoe.

The next example illustrates the use of the two Posteriority Markers *tau* TM5 'be about to', *pasi* TM4, and again the Necessity Marker *toro* TM7 'must'. The Posteriority Marker2 *pasi* (TM4) is combined with the IPFV Marker to signify habituality.[19] As in (40) the RefTs change from clause to clause, see (41).

(41) a. *Beara tau nao tea suvasuva,*
be=ara tau nao tea suva-suva
when=1PL.IN.PRON TM5 go COMPL1 RED-poison
'Before we go to poison fish,'

b. *eara toro matatopo amaa taba*
e-ara toro matatopo a=maa taba
H-1PL.IN.PRON TM7 prepare ART2.SG=PLM taba
'we must prepare the things'

c. *to pasi dee raara.*
to pasi dee ra=ara
REL TM4 take 1PL.IN.IPFV=1PL.IN.PRON
'that we'll take there.' (37:3)

[19]There is no example of *pasi* TM4 without an aspect marker in this text collection. For the use of *pasi* without the IPFV Marker and further information see https://dictionaria.clld.org/units/teop-pasi.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

The use of the Timitive Marker *mene* TM6 is illustrated by a VC headed by *hiki* 'not have', see (42).

(42) a. *Meara toro kikira nio naosinivi,*
Me=ara toro kikira ni=o nao-sinivi
and4=1PL.IN.PRON TM7 look.after APPL=ART3.SG tree-sinivi
'We must look after the canoe tree,'

b. *eara mene hiki sinivi.*
e-ara mene hiki sinivi
H-1PL.IN.PRON TM6 not.have canoe
'otherwise we would not have canoes.' (7:16)

7.5 The Aspect Markers

The Imperfective-Marker (IPFV) and the Perfective-Marker (PFV) hold the last position of the VC and exclude each other. The IPFV Marker inflects for person and number, see Table 13.

Table 13: The Imperfective and the Perfective Aspect Markers and their meanings.

ASPECT MARKER	GLOSS	MEANING
nom	IPFV	The situation is timeless, or it lasts for some time and includes the utterance time or the situation time of some other situation before or after the utterance time.
nana, =na, na=	3SG.IPFV	
rara, =ra, ra=	1PL.IN.IPFV	
rori, =ri, ri=	3PL.IPFV	
=(v)u, =v=	PFV[20]	The situation is, was, will or could be completed and is relevant to a subsequent situation.

The IPFV Marker indexes the subject NP or Pronoun as in (41c) unless a 1st or 2nd person Pronoun functions as the object and a NP or 3rd person Pronoun as the subject. Then it indexes the object Pronoun, see (43).

[20] In the MTED the Perfective Aspect Marker (PFV) is called Immediateness Marker and glossed by IMM, because we thought that this marker only signifies that a situation that is relevant for an immediately subsequent situation.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(43) *me eve kahi ani vakavakavara kurusu araraara*
me eve kahi ani va-kava-kavara kurusu
and4 3SG.PRON TM1 eat CAUS-RED-finished indeed
ara=ra=ara
1PL.IN.OBJM=1PL.IN.IPFV=1PL.IN.PRON
'and he is going to eat us all.' (0513_DoReCo_doreco_teop1238_Sii_06, in Mosel (2024))

The 3rd person plural IPFV Marker regularly indexes subject plural Pronouns and NPs with human referents as in (9), (14), but sometimes also things and animals that play an important role in their context, see (30:8).

The form *nom* indexes 1SG, 1PL.EX., 2SG, and 2PL subject Pronouns, but is simply glossed by IPFV, because it may also index 1PL.IN, 3SG and 3PL arguments, if the pre-head TM marker is not the Realis Marker *na* TM2, see (44).

(44) *A bua kehaa bona to kahi ato vamasuu bata ni nom bona kave*
A bua kehaa bona to kahi ato va-masuu bata ni
ART2.SG two2.SG shell ANA.SG REL [TM1 hold ADVR-steady CONT APPL
nom bona kave
IPFV]$_{VC}$ OBJ.ART2.SG net
'These two shells (i.e. heavy Helmet Shells) will hold the net steady.' (27:29)

The clitic forms of the IPFV and PFV Markers are attached to words preceding them within the VC or to a word directly following them beyond the VC.[21]

TM-Markers combine with Aspect Markers in various ways, but they may also occur without any Aspect Markers, and IPFV Markers may lack a TM-marker, see Table 14.

Table 14: The distribution of TM Markers Aspect Markers.

	GLOSS	V	V - IPFV	V - PFV
paa	TM3	(8), (12), (17), (27b) (39c)	(17:44), (24:38)	(40c), (47), (27:20)
na	TM2	(36), (37), (38)	(1), (9), (11), (13)-(15), etc.	-

[21]Search (Words extra) in the MTED for the Gloss "IPFV" and find 84 entries. Then search for the Gloss "IMM" and find 46 entries for the PFV Marker.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

toro	TM7	(40a), (41b), (42a)	(5:151)	-[22]
kahi	TM1	(40b)	(43), (44)	(48), (30:15)
pasi	TM2	other texts[23]	(41c), (17:19)	(49), (35:8)
tau	TM5	(41a)	(35)	-
mene	TM6	(42b)	(27:30)	-
∅	TM	(39b), (19:17)	(45), (46), (6:5)	-

The VC of relative clauses obligatorily lacks the Realis Marker *na* TM2, so that only the IPFV Marker marks it to express habitual situations, see (45).

(45) *A rupi a bero kurusu to vahuhu nana a goroto.*
A rupi a bero kurusu to vahuhu nana a goroto
ART3.PL egg ART3.PL many very REL lay.eggs 3SG.IPFV ART2.SG turtle
'The turtle lays many eggs indeed.' (26:16)

Further types of clause in which the VC obligatorily lacks the Realis Marker *na* TM2, but may be marked for the imperfective aspect are the clauses with the Double Negator (5:6), Adverbial Clauses (6:5), Complement clauses (5:9), and Imperative Clauses, see (46).

(46) *Kikira vakikis bata koa ni nom eve.*
Kiikira va-kikis bata koa ni nom eve
watch ADVR-strong CONT just APPL IPFV 3SG.PRON
'Just keep carefully watching it.' (35:18)

The PFV-Marker combines most frequently with the Change-of-Situation Marker *paa* TM3. If the reference time is simultaneous with utterance time, the clause refers to a past event that is still relevant, see (47).

(47) *Nomana amaa matapaku vai paa rova kahi avuaraara.*
Nomana a=maa matapaku vai paa rova kahi
today ART2.SG=PLM practice DEM6 TM3 disappear from
a=vu=araara
OBJM=PFV=1PL.IN.OBJ.PRON
'Today these practices have disappeared from us.' (26:34)

[22] In other texts *tau* TM4, *toro* TM7 and *mene* TM6 are found in VCs, but they precede the TM3-V-PFV-Construction, e.g. *enaa tau paa gono=u* 'I was about to get ...'

[23] See https://dictionaria.clld.org/units/teop-pasi.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

When the PFV-Marker combines with the Posteriority Marker *kahi* TM1, the event is located after the RefT and relevant for a following event, see (48).

(48) *me kahi huha vuara bona maa bon amaa bero.*
me kahi huha vu=ara bona maa bon a=maa
and4 TM1 tie PFV=1PL.IN.PRON OBJ.ART2.SG PLM day ART2.SG=PLM
bero
many
'(The work is big,) and we will tie (the net) many days.' (27:23)

The same kind of temporal relation is signified by the Posteriority Marker *pasi* TM4 in combination with the pfv-Marker, see (49).

(49) *O dorana o naono pasi vaasun vori,*
O dorana o naono pasi vaa-sun v=ori
ART3.SG four ART3.SG pole TM4 CAUS-stand PFV=3PL.PRON
'They will put up four poles, (and then they lay another four poles across, ...)' (6:34)

8 The Noun Phrase (NP)

8.1 Introduction

NPs are marked by an Article which holds the first position of the phrase and is only dropped in the fixed expressions, e.g. *meha maa vuri* 'sometimes' (lit. 'other times'), *meha papana* 'other people, others' (lit. 'other group') at the beginning of a clause.[24] NPs are headed by a Noun, a Verb, and rarely by an Adjective. The head may be preceded by additional determiners and followed by other content words. The last position of the NP is optionally held by the Anaphoric Demonstrative or another kind of Demonstrative. The sequential order of the constituents of basic NPs is shown in (50).

(50) [ART determiners specifiers HEAD X ANA/DEM]$_{NP}$

The Article signifies the lexical class of the head of the NP, which is different from its word class, and the specificity and grammatical number category of the NP. The paradigm of the Articles is presented in Section 8.2, and the classification of NP heads is described in Section 8.3. Then Section 8.4 deals with pre-head

[24] See (5:83), (5:144).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

determiners and other words that follow the Article and further specify the reference of the NP.

The post-head position X can be held by a modifying content word, see Section 5.3, a modifying LnkP (Section 4.2) or a content word functioning as the complement of a relational NP head, see Table 15.

Table 15: Relational Nouns and Verbs with complements in NPs.

	TEXT	TRANSLATION	REF
ART N V	*o kaku vagana*	'a kind of fishing'	(10)
OBJ.ART N N	*bene ta boon*	'piece of mangrove wood'	(13)
ART V N	*a deedee overe*	'the carrying of coconuts'	(5:157)

NPs can be preceded by an attributive NumP and followed an attributive NP, AdjP, or PrepP, see Section 4.2. If the NP head is marked by the Possessive Marker, it is followed by a possessor NP or Pronoun, see Section 10.

NPs preceded by NumP or containing the pre-head Numeral *bua*/*bua* 'two' are grammatically singular, see Section 8.4. Furthermore, NPs and Pronouns referring to inanimate objects are mostly grammatically singular forms.

8.2 The paradigm of Articles

The paradigm of Teop Articles distinguishes the three classes of NP heads, singular and plural of the NP and its specific or non-specific reference, see Table 16.

Table 16: Relational Nouns and Verbs with complements in NPs.

	GLOSS	ART1		ART2		ART3	
		SG	PL	SG	PL[25]	SG	PL
Specific Basic Article	ART	*e*	*ere*, *o*	*a*	*o*	*o*	*a*
Specific Object Article	OBJ.ART	*bene*[26], *bone*	*bere*, *benere*	*bona*	*bono*	*bono*	*bona*
Non-specific Article	NSPEC	-	-	*ta*	*to*	*to*	*ta*
Partitive Article	PART.ART			*sa*[27]			

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

If the Specific Article precedes a NP in a non-predicative function, the NP refers to an entity that is identifiable by the speech situation or the context. The Specific Object Article marks a non-topical object NP in clauses with a 3rd person topical argument, see Section 3.

A predicative NP with a Specific Article states that its referent is identical with the referent of the subject NP or Pronoun, see (51),

(51) *O haopi a hena na iana ...*
O haopi a hena n=a iana
ART3.SG wrasse ART2.SG name 3SG.POSS=ART2.SG fish
'Haopi (Wrasse) is the name of a fish (that stays underground).' (35:1)

or that the subject referent belongs to a specific kind of entity, see (52).

(52) *A goroto a iana ...*
A goroto a iana
ART2.SG turtle ART2.SG swimming.animal
'The turtle is a swimming animal ...' (26:2)

The plural form *ere* ART1.PL marks associative plurality, e.g. *ere iaa* 'my mother and my aunts'[28]; it is not found in this text collection. The plural forms of the 2nd and 3rd class of specific and non-specific Articles denote groups of entities as, for example, the young breadfruit trees that are used for turtle nets, see (53).

(53) *A naono baneo vai a rutarutaa na mataa nana, ...*
A naono baneo vai a ruta-rutaa na mataa nana
ART3.PL tree breadfruit DEM6 ART3.PL RED-small TM2 good 3SG.IPFV
'The small breadfruit trees are good (because they are moist).' (8:12)

Distributional plurality, i.e. the distribution of objects over space or time as in (54) and (55) below, is expressed by NPs headed by the Pluralmarker *maa*, see Section 8.3.

The Non-Specific Article (NSPEC) marks NPs denoting entities whose existence or presence is denied, see (54),

[25]For the "inverse number marking" of 2nd class Nouns and 3rd class Nouns by Articles see Corbett (2000: 159-166) who also discusses this number marking in Teop (pp. 164-165).

[26]The Article *bene* is also used with reflexive pronouns, search the MTED Headword for "^bene".

[27]See https://dictionaria.clld.org/units/teop-sa_1.

[28]See https://dictionaria.clld.org/units/teop-ere, also (Mosel 2014b: 66-67), (Corbett 2000: 84, 101), and (Daniel & Moravcsik 2013).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(54) *Amaa hum bona kou na hiki nana to vasu, ...*
A=maa hum bona kou na hiki nana to vasu
ART2.SG=PLM place ANA.SG EMPH2 TM2 not.exist 3SG.IPFV NSPEC2.PL stone
'(And the turtle netting places ... are Taenaruene, Teopasuna, Teanin.)
These places do not have any stones, (just white sand).' (28:15)

or entities whose particular identity is not known yet, see (55).

(55) *ta maa naono baneo vai ta maa rutarutaa.*
ta maa naono baneo vai ta maa ruta-rutaa
NSPEC2.SG PLM tree breadfruit DEM6 NSPEC2.SG PLM RED-small
' (You must go and cut) some small breadfruit trees.' (8:7)

The Partitive Article *sa* 'some' (PART.ART) signifies that the NP refers to some or any part of a whole, see (56).

(56) *Na pakupaku raara bona kanono ae a iri ae sa taba sa ponisi mene dee gunaha bona kanono.*
Na paku-paku ra=ara bona kanono ae
TM2 RED-do 1PL.IN.IPFV=1PL.IN.PRON OBJ.ART2.SG string and1
a iri ae sa taba sa ponisi mene dee gunaha
ART2.SG hook and1 PART.ART thing PART.ART heavy for get go.down
bona kanono
OBJ.ART2.SG string
'(We do the angling with a string and a hook) and something heavy to get the string down.' (33:2)

The examples (53), (55) and (56) also illustrate that AdjPs are marked by an Article of the same kind of specificity, class and number as the NP they relate to as an attribute.

The Articles do not distinguish between definite and indefinite NPs. Indefiniteness can be optionally marked by the Indefiniteness Marker, see Section 8.4, and definiteness by the Anaphoric Demonstratives *bona* (ANA.SG) and *bari* (ANA.PL).

8.3 The Articles and the classification of NP heads

Nouns, Verbs and Adjectives heading a NP are classified with respect to their compatibility with one or two of the three Article classes. Their classification

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

shows some variation, which is determined by certain grammatical constructions or a speaker's individual choice. In the MTED the classification of Nouns is indicated in the Part of Speech field.[29] It is largely predictable:

- N1: Proper names of people, kinship terms, Nouns denoting social roles, and domestic animals.[30]
- N2: Nouns denoting kinds of human beings, vertebrates, invertebrates with legs, landmarks, food items, and parts of a whole; collective Nouns and four words denoting distinct kinds of plurality, see below.
- N3: Nouns denoting plants, parts of plants, and many things made of plant materials. Relational Nouns that are derelationalized by the suffix *na* DEREL, see Section 10.
- N1/N2 animal names of the N2 class are shifted to the N1 class when the animals figure as protagonists in folk stories. The Noun *ta* 'piece', e.g. *bene ta boon* 'a piece of mangrove wood' (13) shifts to the N2 class, when it is used with a NumP or an AdjP, see Section 8.5.
- N2/N3 Nouns denoting a part of a whole, e.g. *paka* 'leaf', are used as an N2 in the Inalienable Possessive Construction and as a N3 in a simple ART-N construction, see Section 10.

Verbs and Adjectives functioning as NP heads are, with two exceptions, affiliated with the N2 class (Mosel 2017: 274-277, 279). The exceptions are *moroko* 'speak' and *upeupehe* 'think'.

Four N2 words signify distinct kinds of plurality and form compounds with the following Noun referring to the quantified entity:

1. *maa* (PLM), Pluralmarker, signifies distributional plurality[31]
2. *maamihu* 'all sorts of, every';

[29]For further information see https://dictionaria.clld.org/contributions/teop#section7 and (Mosel 2014a).

[30]Due to the genre of this text collection, the Article of the 1st class is only presented by a total of 14 tokens with singular NPs headed by *beera* 'chief', *guu* 'pig' and *ta* 'piece'.

[31]Distributional plurality means that the NP refers to a plurality of entities that are distributed over space or time and do not form a group, cf. Corbett (2000: 11-117). Compare (53) with (54).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

3. *ba* (KIN.PLM), the Kinship Pluralmarker, denotes a group of people of the same generation sharing the same status in kin relations', e.g. 'grandparents', 'mothers', etc.[32]

4. *tom* (DYAD), the Dyadic Relationship Marker' means 'group of two or more people who are in a reciprocal kin relationship', e.g. 'mother and child'.[33]

The classification of these four words as N2-Nouns is based on the fact that they are always marked by the singular Article of the 2nd class (ART2.SG) irrespective of the inherent noun class of the following Noun which denotes the quantified entity. This is shown by NPs in which *maa* PLM is followed by an N3 Noun such as *hum* 'place' in (54) and *naono* 'plant', see (57).

(57) *Amaa naono*
a=maa naono
ART2.SG=PLM plant
'the plants' (10:23)

Similar to other Nouns, see Section 5.3, *maa* PLM forms compounds with Verbs, see (58):

(58) *bona maa kiu vahihivaa te suburiori vai a otei.*
bona maa kiu va-hihivaa te
OBL.ART2.SG PLM work ADVR-difficult PREP.ART1.SG
subu-riori vai a otei
grandparent-3PL.POSS.PRON DEM6 ART2.SG man
'the difficult work (lit. 'works') of their grandfather' (See https://dictionaria.clld.org/units/teop-vahihivaa_1)

The N2 Noun *maamihu* 'all sorts of, every' is followed by N2-class Nouns, see (59),

(59) *a maamihu taba*
a maamihu taba
ART2.SG all.sorts.of thing
'all the things' (29:4), or 'everything' (33:9)

and by N3-class Nouns, see (60).

[32] See (1), (37), and https://dictionaria.clld.org/units/teop-ba.
[33] Search (Words extra) in the MTED for the Gloss DYAD and find 11 entries.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(60) *a maamihu hum*
a maamihu hum
ART2.SG all.sorts.of place
'all sorts of places, everywhere' (See https://dictionaria.clld.org/units/teop-maamihu_hum)

8.4 Pre-head words that specify the reference of the NP

In addition to the Specific Article, the reference of the NP may be specified by the following six wordforms between the Article and the NP head.

1. The Determiner called Indefiniteness Marker *peha*[2], *peho*[2] (INDEF) 'a, some, any' is a synonym of the Numeral *peha*[1], *peho*[1] 'one'; it is incompatible with the Numeral 'one', but compatible with the Pluralmarker *maa*, see Section 8.5.
2. The Determiner *meha*, *meho* 'some item or items (of a group), other' is incompatible with the Indefiniteness Marker and holds the same position.
3. The Numeral *peha*[1], *peho*[1] 'one' is incompatible with the Indefiniteness Marker.
4. The Numeral *bua*, *buo* 'two' is compatible with the Indefiniteness Marker.
5. The Diminutive Particle *sii* (DIM) means 'little' or denotes the speaker's empathy.
6. The Adjective *vahara* 'small (persons or things)' (small.PL).

The sequential order of the pre-head elements is fixed, see Table 17.

Table 17: The pre-head determiners in their sequential order in NPs.

ART	DET	NUM	DIM	ADJ	NOUN	TRANSLATION	REF
A	*peha*	-	-	-	*aba*	'a person, someone'	(26:18)
O		*peho*		-	*sinivi*	'one canoe'	(30:5)
O	*meho*	*buo*		-	*sinivi*	'the other two canoes'	(30:6)
O			*sii*	*vahara*	*vasu*	'the little stones'	(35:6)

The inflecting forms of the Numerals *peha*[1], *peho*[1] 'one', *bua*, *buo* 'two' and the Determiners *peha*[2], *peho*[2] INDEF, *meha*, *meho* 'other' indicate the noun class and

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

grammatical number of the NP. The Numeral *peha*[1], *peho*[1] and the Determiner *meha*/*meho* may function as the head of anaphoric SubstPs, as illustrated by (2) and (6), see Section 4.1.

8.5 The Noun *ta* 'piece' and the *maa* Pluralmarker *maa*

The Nouns *ta* and *maa* have two properties in common:

1. They head compounds and never occur by themselves.
2. They are repeated in attributive AdjPs.

The Noun *ta* 'piece' belongs to the N1/N2 class[34] and is repeated in a modifying AdjP, see (61).

(61) *A ta naono vai a ta beera, bebeahu ae kikis*
A ta naono vai a ta beera bebeahu ae kikis
ART2.SG piece wood DEM6 ART2.SG piece big long and1 strong
'A big, long and strong pole' (16:3)

Another Noun that is repreated in AdjP is *kara* 'vine', see (11:6), (11:78). The same repetition occurs optionally in NPs headed by *maa* PLM, see (62).

(62) *tea maa nahu vai amaa beera*
te=a maa nahu vai a=maa beera
PREP=ART2.SG PLM pot DEM6 ART2.SG=PLM large
'in large pots' (6:50)

The Pluralmarker *maa* and *ta* 'piece' may form a complex compound with a third Noun[35], see (63).

(63) *Amaa ta naono bari mee amaa ta kakato koa.*
a=maa ta naono bari mee a=maa ta kakato koa
ART2.SG=PLM piece wood ANA.PL also ART2.SG=PLM piece short quite
'These poles are quite short.' (16:24)

The repetition of the Pluralmarker is also found with the Indefiniteness Marker, see (64)

[34] See https://dictionaria.clld.org/units/teop-ta_2

[35] Some authors write *mata* instead of *maa ta*, e.g. *bona mata goroto* 'the pieces of the turtle' (26:47).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(64) *Amaa peha maa vuri ...*
A=maa peha maa vuri
ART2.SG=PLM INDEF2.SG PLM time
'Sometimes (they go diving for turtles).' (26:27)

and the Determiner *meha* 'other', see (65).

(65) *Amaa meha maa ana*
a=maa meha maa ana
ART2.SG=PLM other2.SG PLM root
'Other roots (have also started growing out (of the nut))' (5:17)

9 Pronouns

9.1 The four person categories of Teop Pronouns

The Teop Pronouns distinguish between four persons, singular and plural, and five classes of morpho-syntactic forms: basic Pronouns (PRON), Heavy Pronouns (H-PRON), Object Pronouns (OBJ.PRON), suffixed Possessive Pronouns (POSS-PRON), and the clitic Consecutive Pronoun (PRON=), see Table 18.

Table 18: The Teop Pronouns.

	PRON	H-PRON	OBJ.PRON	POSS-PRON	PRON=
1SG	*naa*	*e-naa*	*a-naa*	*∅-naa*	*ne*[36]
1PL.EX	*nam*	*e-nam*	*a-nam*	*-ma-nam*	-
1PL.IN	*ara*	*e-ara*	*ara-ara*	*-ra-ara*	*a=re*
2SG	*an*	*e-an*	*vu-an*	*-m-an*	-
2PL	*am*	*e-am*	*ame-am*	*-me-am*	-
3SG	*eve, e*	*eove, eve*	*eve, e*	*-na-e*	*o=re*
3PL	*ori*	*e-ori*	*ori*	*-ri-ori*	*o=re*
4SG	-	-	*bona*	-	-
4PL	-	-	*bari*	-	-

The 1st and 2nd Person Pronouns differ morphologically and syntactically from the non-speech-act Pronouns which are called 3rd and 4th Person Pronouns. While

[36]See https://dictionaria.clld.org/units/teop-ne_2 The form occurs in the TLC by itself or follows a subject 1SG.PRON or 2SG.PRON, e.g. *ne nao* 'then I go'. It does not occur in this text-collection.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

the 1st and 2nd Person Object Pronouns are derived from the Basic Pronouns by prefixes, the 3rd Person Pronouns do not distinguish between Basic and Object Pronouns, e.g. *eve*, e 3SG.PRON, *ori* 3PL.PRON. But corresponding to the differential object marking of NPs, see Section 3, the 3rd Person Basic Pronouns only function as an object, if the subject Pronoun refers to a speech-act participant, see (66).

(66) *Beara tara ahe eve, ...*
be=ara tara ahe eve
when=1PL.IN.PRON see recognize 3SG.PRON
'When we spot it, (we must push the fishing-stick into it.)' (35:7)

If a NP or a 3rd Person Pronoun functions as the subject, the object is formed by the 4th Person Pronoun, see (67).

(67) *... a peha aba na antee nana tea paku bona.*
a peha aba na antee nana tea paku bona
ART2.SG one2.SG person TM2 can 3SG.IPFV COMPL1 do 4SG.PRON
'... a single person can do it.' (24:6)

The plural forms of 3rd and 4th Person Pronouns are used in strikingly different ways. The form *ori* 'they, them' (3PL.PRON) is obligatory when the Pronoun refers to more than one person, see (68).

(68) *ean repaa vaan riori,*
e-an re=paa va-an ri=ori
H=2SG.PRON CONSEC=TM3 CAUS-eat 3PL.OBJM=3PL.PRON
'(When they have pulled the canoe home,) you will give them to eat, ...' (24:37)

With non-human referents the 3rd Person Singular form is selected, see (69).

(69) *Bean kosi vakavara a paka taovu, ean paa kaakaru e bono pesupaava, ...*
be=an kosi va-kavara a paka
when=2SG.PRON cut.off.leaves ADVR-complete ART3.PL leaf
taovu e-an paa kaakaru e bono
giant.pandanus H-2SG.PRON TM3 scrape.thorns.off 3SG.PRON OBJ.ART3.SG
pesupaava
coconut.husk
'After you have cut off the pandanus leaves, you scrape off the thorns with a coconut husk ...' (14:9)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Exceptions are found in contexts where animals function as discourse topics as in the descriptions of marine animals. In other cases as in (21), the writer's usage of the plural form seems to be influenced by English. Consequently, *e*, *eve* 3SG.PRON is variably translated by English singular or plural pronouns of the 3rd person.

The selection of *bona* 4SG.PRON or *bari* 4PL.PRON does not only depend on the number of their referents, but also on the number of the referent of the subject NP or Pronoun. The Pronoun *bona* 4SG.PRON is only used, when both the subject NP or Pronoun and *bona* 4SG.PRON refer to a single entity as in (67) 'a single person can do it', or *bona* 4SG.PRON refers to inanimate entities.

The plural form *bari* 4PL.PRON refers, as expected, to a plurality of undergoers in clauses with a singular subject NP or Pronoun, see in (70).

(70) *eove repaa mee ri bari rasuu tea aito.*
eove re=paa mee ri bari rasuu tea
H.3SG.PRON CONSEC=TM3 take 3PL.OBJM 4PL.PRON jungle COMPL1
aito
collect.herbs
'(A man who is an expert on herbs selects two or four men,) then he takes them into the jungle to collect herbs.' (28:3)

But unexpectedly, *bari* 4PL.PRON also refers to a single undergoer in clauses with a subject NP or Pronoun referring to a plurality of actors, see (71).

(71) *eori repaa tagava bari*
e-ori re=paa tagava bari
H-3PL.PRON CONSEC=TM3 fell 4PL.PRON
'and then they fell it,' (6:45)

The form *bari* 4PL.PRON is not only used in clauses about present habitual events, but also in clauses about individual past events with more than one actor and a single undergoer, see (72).

(72) *meori pae ni bari.*
me=ori pae ni bari
and4=3PL.PRON bury APPL 4PL.PRON
'and they buried him.' (See https://dictionaria.clld.org/units/teop-bari_1)

The reference to a plurality of undergoers in (70) and a single undergoer in (71) and (72) is not distinguished by the object Pronoun, but by the Object Marker *ri* in the VC of (70).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

The next four tables present an overview of the syntactic functions of the 1st Person Inclusive Plural Pronouns, the 3rd, the 4th Person Pronouns, and zero anaphora. For reasons of space, the 1st Person Inclusive Plural Pronoun was chosen as presentative for 1st and 2nd Person Pronouns, see Table 19.

Table 19: The functions of 1st Person Inclusive Pronouns.

FORM (GLOSS)	SYNTACTIC FUNCTIONS				
	CLEFTED PRON.	TOPICAL SUBJ.	TOPICAL OBJ.	NON-TOP. SUBJ.	NON-TOP. OBJ.
e-ara (H-1PL.IN.PRON)	+[37]	(5:53)	-	-	(81a)
ara (1PL.IN.PRON)	-	-	-	(10)	-
a= (1PL.IN.PRON=)	-	(78)	-	-	-
araara (1PL.IN.OBJ.PRON)	-	-	-	-	(22:20)

The syntactic functions of the 3rd Person Pronouns differ from those of the 1st and 2nd Person Pronouns, see Table 20.

Table 20: 3rd Person Pronouns and their functions.

FORM (GLOSS)	SYNTACTIC FUNCTIONS				
	CLEFTED PRON.	TOPICAL SUBJ.	TOPICAL OBJ.	NON-TOP. SUBJ.	NON-TOP. OBJ.
eove (H.3SG.PRON)	(20:2)	(5:11)	-	-	(refl. obj.)[38]
eve (3SG.PRON)	(11:7)	(7:8)	(19:2)	(5:146)	(37:10)[39]
=e (3SG.PRON)	-	-	-	(5:165)	(5:141)
o= (3SG/PL.PRON=)	-	(5:3)	-	-	-
e-ori (H-3PL.PRON)	+[40]	(7:11)	-	-	-
ori (3PL.PRON)	-	(7:10)	-	(7:10)	(24:37)

[37] There is no example in this text collection, but see *Enaa to vigu bona sikuuru bona.* 'It was me who build this school.' (Rum et al. (2014: 59)) and https://dictionaria.clld.org/units/teop-vigu.

[38] When functioning as a reflexive object, it is preceded by the Object Article *bene* (OBJ.ART1.SG), see https://dictionaria.clld.org/units/teop-eove.

[39] See https://dictionaria.clld.org/units/teop-eve.

[40] *Eori to vigu bona vaan vaa Kekesu.* 'It was them who built the village of Kekesu.' (Morekevan et al. 2014: 46).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

As illustrated by the examples (67), (70), (71) and (72), the distinction of singular and plural 4th Person Pronouns is not exclusively determined by its antecedent, but also by the referent of the subject NP, so that depending on the context both the singular form *bona* and the plural form *bari* are translated by English singular or plural forms, see Table 21.

Table 21: The 4th person Pronouns and their English translations.

PRONOUN	GLOSS	TRANSLATION	REF
bona	4SG.PRON	it	(5:30), (17:25), (67)
		them	(10:12), (28:4)
bari	4PL.PRON	it, him	(5:116), (7:8), (26:31), (71), (72)
		them	(5:91), (28:3, (70)

If an actor or undergoer of a situation is understood from the context, it may not be explicitly mentioned by a NP or Pronoun. This zero-anaphora is found in the topical position of subjects or direct/primary objects and in the position of non-topical direct/primary objects see Table 22.

Table 22: Zero anaphora.

	SUBJECT	DIRECT/PRIMARY OBJECT
Topical position	(5:7), (10:11)	(5:43), (13:15), (33:2)
Non-topical position	-	(5:154), (5:155), (38:4)

The following sections describe the functions of the Heavy Pronoun in Section 9.2, and the Consecutive Pronoun in Section 9.3. For the Possessive Pronouns see Section 10.

9.2 The Heavy Pronoun

The Heavy Pronoun functions as a clause initial topical subject, see (73),

(73) *eove repaa taneo tea pura hopo vo kasuana.*
eove re=paa taneo tea pura hopo vo kasuana
H.3SG.PRON CONSEC=TM3 start COMPL1 grow enter GOAL ground
'(When the sprouting root comes out,) it starts growing into the ground,'
(5:11)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

as a clause external focused Pronoun in the so-called "it-cleft construction"[41], see (74),

(74) *Eove to kom, hio ae goroho raara.*
Eove to kom hio ae goroho ra=ara
H.3SG.PRON REL step.on sit and1 sleep 1PL.IN.IPFV=1PL.IN.PRON
'(The floor is a thing in our house, the Teop people.) It is where we step, sit, and sleep on.' (20:2)

as the head of a negated VC[42], see (75),

(75) *Saka enaa haana to ato.*
saka e-naa haa=na to ato
NEG1 H-1SG.PRON NEG2=3SG.IPFV REL hold
'(It is) not me who took possession (of it).' (Siarive et al. 2014: 22)

and as a reflexive object Pronoun of a transitive Verb, see (76).

(76) *menaa paa hivi komana enaa,*
me=naa paa hivi komana e-naa
and4=1SG.PRON [TM3 ask self]$_{VC}$ H-1SG.PRON
'and I asked myself,' (See https://dictionaria.clld.org/units/teop-enaa)

The 3rd person reflexive Pronouns are preceded by the Article *bene* OBJ.ART1.SG, see (77).

(77) *mepaa hivi komana bene eve, ...*
me=paa hivi komana bene eve
and4=TM3 red ask self OBJ.ART1.SG 3SG.PRON
'(a young boy found the vine of a yam) and he asked himself, ...' (See https://dictionaria.clld.org/units/teop-bene_eve)

9.3 The Consecutive Pronoun

The Consecutive Clause is a dependent non-embedded clause that is marked by the conjunction *re* 'then, so that' (CONSEC) which holds the position after the obligatory topical subject NP or Pronoun. The VC is marked by the Change-of-Situation Marker *paa* TM3 or unmarked. The subject may be formed by a

[41] Andrews (2007: 133, 149, 152, 155); Lambrecht (1994: 17, 70-71).
[42] Compare (18) in Section 4.2.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

NP, a Heavy Pronoun (74), or a shortened proclitic form, e.g. *a=re* 'then we' (1PL.IN.PRON=CONSEC), *o=re* 'then he/she/it/they' (3.PRON=CONSEC), which exclusively occur in this clause type, see (78).

(78) *are paa varoava e, ore raka.*
a=re paa va-roava e o=re
1PL.IN.PRON=CONSEC TM3 CAUS-be.in.the.sun 3SG.PRON 3.PRON=CONSEC
raka
dry
'(After having scraped the wild banana plant,) we put it in the sun so that it becomes dry.' (11:56)

The construction *ore suguna* 'until' (lit. 'then it reaches') is a common way of expressing that some situation comes to an end, see (5:164), (34:21), (37:16), (See https://dictionaria.clld.org/units/teop-suguna).

10 Alienable and Inalienable Possessive Constructions

The Alienable Possessive Construction (Al.Poss.Constr) is formed by a NP that is headed by a Noun or a Verb and followed by a PrepP introduced by *te* PREP. This PrepP refers to the owner of the referent of the NP, e.g. *a inu te=ara* 'our house' (22), its consumer, e.g. *a tabaan te=o burumakao* 'the food of the cows' (24), and the actor, e.g. *a kiu vahihiva te suburiori* 'the difficult work of their grandparent' (58).

The Inalienable Possessive Construction (Inal.Poss.Constr.) is formed by a NP that with one exception is marked by the Possessive Marker, see Table 18, and obligatorily followed another NP, see (79),

(79) *o paka no overe*
o paka n=o overe
ART2.PL leaf 3SG.POSS=ART3.SG coconut.palm
'the leaves of the coconut palm' (5:15)

or a Pronoun, see (80).

(80) *A ba suburaara ...*
a ba subu-ra-ara
[ART2.SG KIN.PLM grandparent-1PL.IN.POSS-1PL.IN.PRON]$_{NP}$
'our grandparents ...' (5:75)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

The standard orthography of *o paka no overe* 'the leaves of the coconut palm' in (79) does not reflect its morphosyntactic structure, because the Possessive Marker *n* 3SG.POSS is suffixed to *paka* 'leaf' and signifies its relationality, whereas the Article *o* introduces the complement NP *o overe*. The Possessive Marker inflects for person and number and indexes the complement NP or Pronoun with the exception of the 1st Person Singular Pronoun *naa*, see Table 18 in Section 9.1.

In (80) the segmentation of *subu-ra-ara* 'our grandparent' and its glossing render the morphological structure of the word, but in other examples and in the texts, the sequence of a Possessive Marker and a Basic Pronoun is treated as a single linguistic unit, e.g. *a ba subu-raara* 'our grandparents (ART2.SG grandparent-1PL.IN.POSS.PRON' (1), (37).

The Inal.Poss.Constr. denotes the following relationships[43]:

- unalterable kinship, see (80);
- a body part and the human or animal it belongs to (33);
- a part of a whole (25);
- the name of a person, animal, or thing (51);
- the size of a thing (5:54), (16:42), (19:28);
- the quantity of things (16:29);
- a spatial relationship (23); (5:33); (5:161), (32:8);
- a temporal relationship (22:15), (22:19),
- an action and its undergoer (28);
- the relation between a property and the bearer of the property (81);
- a comparative relationship.[44]

The head of the following Inal.Poss.Constr. *mataa* 'good' is classified as an Adjective, because the selection of the Article *a* (ART2.SG) is determined by the preceding context, i.e. the surrendering which is *a hata* 'bad', see (81).

[43]Search (Words extra) in the MTED for the Gloss "POSS" and find 137 entries.

[44]See Mosel (2017: 279-280), https://dictionaria.clld.org/units/teop-babarii, and https://dictionaria.clld.org/units/teop-kirisi_1

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(81) a. *Beara hee komana ni eara, a hata,*
Be=ara hee komana ni e-ara a hata
when=1PL.IN-PRON give self APPL H-1PL.IN.PRON ART2.SG bad
'If we surrender (lit. give ourselves), it is bad,'

b. *evehee na tei me nana bona mataa nae mee.*
evehee na tei me nana bona mataa nae
but TM2 be.there with 3SG.IPFV OBJ.ART2.SG good 3SG.POSS.PRON
mee
also
'but it also has also its good side.' (Mahaka et al. 2014: 105)

Relational Nouns can be derelationalized by the suffix *-na* DEREL[45], as, for example *toon-* 'top', see (82),

(82) *bono kapa vaa toonuna,*
bono kapa vaa toonu-na
OBJ.ART3.SG cover LNK top-DEREL
'(they start scraping off) the top cover (lit. the cover of the top),' (8:15)

or the kinship term *sina-* 'mother', see (83).

(83) *to sinivi kiri bona vuu tom sinana.*
to sinivi ki=ri bona vuu tom sina=na
NSPEC3.SG canoe DAT=3PL.OBJM ART2.SG cluster DYAD mother=DEREL
'a canoe for the family.' (7:15)[46]

Other nouns, e.g. *paka* 'leaf' are marked by the ART2 Article, when they head a Inal.Poss.Constr. as in (79), but by the ART3 Article (69), when they are used as a non-relational Noun.[47]

11 Dependent Clauses

11.1 Introduction

There are two kinds of dependent clauses in Teop that are marked by a conjunction:

[45] Search (Words extra) in the MTED for the Gloss "DEREL" and find 63 examples.
[46] Search (Words extra) in the MTED for the Gloss "DYAD" and find 11 examples.
[47] Search the MTED for the Part of Speech "N2/N3" and find 53 entries.; also see Mosel (2014a: 59-64).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

1. Subordinate Clauses that hold the position of a clause constituent,
2. Dependent Non-Embedded Clauses.

Thirdly, there are unmarked dependent clauses in which a syntactically obligatory subject or object NP or Pronoun is missing, but understood from the context. For examples see Table 22 in Section 9.1.

11.2 Subordinate Clauses

Subordinate clauses are found in 7 syntactic functions, see Table 23.

Table 23: Subordinate clauses.

FUNCTIONS	SUBORDINATE CLAUSES				
		be[1]-	*be*[2]-	*tea*-	*mene*-
	RELATIVE	ADVERBIAL	COMPL.	COMPL.	PURPOSIVE
predicate	(5:56)	-	(5:176)	(31:8)	(30:6)
Subject	(33:11)	-	-	(5:146)	-
Object	-	-	(5:12)	(5:11)	-
oblique object	(17:40)	-	(5:164)	(5:177)	-
attribute	(5:57)	-	-	-	(12:7)
compl. of LNK	-	-	-	(5:180)	
Adjunct	(17:30)	(5:2)	-	-	(29:31)

Comments:

- The Relative Clause is introduced by the Relative Pronoun *to* REL, unless the following VC starts with the TM-Marker *tau* 'about to' (TM5) or *toro* 'must' (TM7). The Relative Pronoun does not inflect and functions as a subject, object, oblique object or adjunct of the Relative clause. The Relative Clause functions as an attribute, and similar to NPs and PrepPs, as a predicate, subject, object, oblique object, and a locative or temporal Adjunct.
- Complement clauses introduced by *tea* (COMPL1) are similar to English to-infinitive clauses. Either the subject or the object NP or Pronoun of the matrix clause functions as their subject. Those introduced by *be*[2] (COMPL2) have a subject NP that is different from the subject of the main clause.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

- The Purposive Clause is introduced by *mene* 'for' and structurally similar to the *tea*-Complement Clause, but differs with respect to its syntactic functions and meaning, see Table 23.
- The Adverbial Clause is introduced by *be*[1] 'when, if'. In the texts about the growth of plants and the production of artefacts temporal Adverbial Clauses typically precede a matrix clause that is frequently marked by the consecutive conjunction *re* 'then' (CONSEC).

11.3 Dependent Non-Embedded Clauses

The three types of dependent non-embedded clauses are linked to a preceding clause by a conjunction:

1. the Consecutive Clause (436 tokens) is marked by *re* 'then, so that' (CONSEC) after a topical NP or Pronoun with, see Section 9.3 and https://dictionaria.clld.org/units/teop-re.
2. the Adversative Clause (35 tokens) is marked by *he* 'but, while' (ADVERS) is the same position as the conjunction re in the Consecutive Clause, see https://dictionaria.clld.org/units/teop-he.
3. the Coordinative Clause (19 tokens) is introduced by the conjunction *me* 'and' (and4), see https://dictionaria.clld.org/units/teop-me_1.

12 Filtered Searches in the Multifunctional Teop-English Dictionary (MTED)

The MTED has two interfaces for filtered searches. The first is called "Words"[48], the second is called "Words extra"[49], see Figures 1 and 2. The column label "MWE Structure" stands for "Multi-Word-Expression Structure". Example searches are shown in Tables 24 and 25.

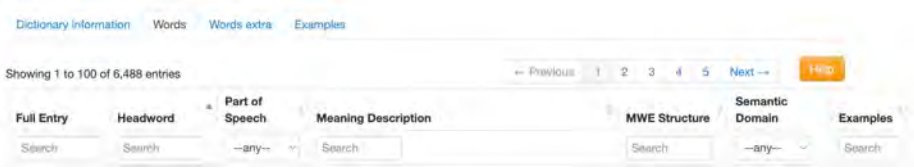

Figure 1: Search interface "Words".

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 4

Introduction

Ulrike Mosel

The texts of this part have been written between 2009 and 2012 for a school book about plants that for various reasons could not be completed, but text excerpts have been integrated in the Multifunctional Teop English Dictionary (MTED) as "examples".[1] The following 10 chapters document that in the beginning of the 21st century local plants are still an essential resource for the production of artefacts or are at least remembered as such by elder speakers.

In the first chapter Joyce Maion describes the growth of the coconut palm and the usage of its parts, which confirms Shoffner's statement (1976: 284) that the coconut palm "has the most diverse uses of any member of the Teop plant assemblage. Almost every part of this tree can be utilized."

The following chapters by Joyce Maion and Ruth Sima Rigamu deal with the sago palm, the Blackboard Tree, the young bread fruit tree, three kinds of bamboo, various plants that are used for making strings, and finally with three kinds of pandanus, see Table 1. The bamboos described in Chapter 10 represent three distinct species called *koopu*, *koverau*, and *kururu* with distinct usages. There is no generic term for them in the Teop language.

Chapter 11 on "Vines, aerial roots, fibres and strings" deals in 14 subsections with plants, parts of plants, and strings that are formally classified as *kara*, e.g. *kara koris* 'vine', *kara kave* 'net vine', *kara ruhu* 'aerial root of the Bengal Ficus', and *kara obai*''string made of the *obai* 'Sweet Flag' (*Acorus Calamus*). The word *kara* functions as the head of compounds and means 'sth. that is thin and long'. Imported plastic strings are called *kara sitiring* in contrast to *kara naono* 'string made of local plant materials'.[2]

[1] In Mosel (2019), search the Semantic Domain of the MTED for "plants" and the Parts of Speech for "N3" and "N3.CONSTR" and you will find 293 entries about plants and parts of plants.

[2] Search the MTED Headword field for "kara " with a space after *kara* and find 33 entries.

Figure 8: *A magura* - The drinkable coconut

Figure 9: *O overe o manoto* - The ripe coconuts

(31) *O overe be vua, a vua overe na topo ge hana batana teo nanisi.*

The coconut palm, when it bears nuts, the coconuts stick or hang on the panicle.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(32)	*A peha totoka ge buaku totoka overe na antee nana tea hana teo peho nanisi overe.*	Six or seven coconuts can hang on one panicle.
(33)	*Beo overe vua, o rakopo na rakopo batana toon no ibu overe.*	When the coconut palm bears nuts, the flower-sheath covers the cluster of coconuts.
(34)	*Bea kukusu overe beera bata, o rakopo repaa takapa kahi bata bono ibu overe.*	When the very young coconut becomes bigger, the flower sheath peels off the cluster of coconuts.
(35)	*A kukusu overe, a overe vai a rutaa, a kobusu.*	The very young coconut is a small coconut that is watery inside.
(36)	*Ahiki vakisi ta tabaan komanae.*	There is not yet any food inside.
(37)	*Be beera eori repaa dao bari bona magura.*	When it grows bigger, they call it *magura* 'ripening coconut'.
(38)	*A pereperee ge kasikasiree a kapa nae.*	Its cover is green or yellow.
(39)	*A tabaan paa tavusu vaevuru komanae, evehee sabin kikisi.*	The food has already developed inside, but it is not hard yet.
(40)	*A tabaani nae a nin mataa kurus.*	Its food has a very good taste
(41)	*A huun vaa tea magura na gaagaga riori.*	The liquid in the *magura* is drinkable.
(42)	*A huun bona a nini mataa kurusu.*	This liquid has a very good taste.
(43)	*Na mosi riori, eori repaa gaga bari.*	They cut (the *magura*), then they can drink it.
(44)	*Bean tara a overe vai a manoto, a kapa nae na uruurunata nana.*	When you look at a ripe coconut, its cover is dark brown.
(45)	*Enam repaa boha voen a overe a mahaka.*	Then we say that the coconut is dry.
(46)	*Bea overe manoto, a tabaani vaa komanae paa kikisiu.*	When the coconut is ripe, the food inside has become hard.
(47)	*Bea overe manoto maa gina teo overe,*	When the coconut has become ripe high up on the coconut palm,
(48)	*ore paa kuu gunaha vo maa teo kasuana.*	it falls down to the ground.
(49)	*A overe vai a manoto na gono riori, eori repaa hovu bari.*	They get the ripe coconut, and then they husk it.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(a) (b)

Figure 10: (a) *Hovu overe* - Husking coconuts, (b) *O pusu hiovu* - Husking stick

Figure 11: *Booboha overe* - Breaking the shell of coconuts

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(50)	***Hovu***	**Husking coconuts**
(51)	*Beara mei rara tea hovu overe, eara na vaamatatopo varaba rara o pusu hiovu.*	Before we husk coconuts, we prepare the husker.
(52)	*O pusu hiovu na paku raara bene ta boon.*	We make the husker from a piece of mangrove wood.
(53)	*Eara na mosi maa rara e ta boon tea boon.*	We cut a piece of mangrove wood in the mangroves.
(54)	*A bebeahu nae toro antee bona peha gea buaku a ato.*	Its length should be one or two yards.
(55)	*Eara repaa karem vakakaniva a peha papana.*	Then we sharpen one end.
(56)	*O papana bona to kahi hovu kaakoo raara.*	This end we will use for husking the coconut.
(57)	*A papana to sa karem vakakaniva vira haa raara,*	The end that we did not sharpen,
(58)	*eve to pasi tahi vaatopo ni noman teo kasuana.*	that is the one that you will push into the ground.
(59)	*Be kavara, ean repaa taneo tea hovu.*	When it is finished, you start husking.
(60)	*Ean na vaahuu hopo ni nom a overe tea ta hiovu.*	You stick the coconut onto the husking stick.
(61)	*Ean paa menaa bata a overe, o kapa repaa takapa kahi bata bono meho kapa.*	Then you bend the coconut so that the cover (the husk) peels off the other cover (the shell).
(62)	*A kukan bau gea dorana a hovu, a overe repaa tahovu vakavara.*	Perhaps three or four husking movements, and then the coconut is completely husked.
(63)	*O kapa to hovu noman na dao raara bono pesupaava*	The cover that you remove by husking is called *pesupaava* 'fibrous husk'.
(64)	*Nomana a pusu hiovu na paku riori bona maa hum aeana vai a bebeahu.*	Today they make the huskers from long pieces of iron.
(65)	*Na karem vakakaniva riori bona maa soo aeana.*	They sharpen (them) with iron files.
(66)	*Eori repaa hovu overe ni bari.*	Then they use them for husking coconuts.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(67) *Ean he paa hovu vuru o kapa vaa gina, mean paa hovu kahi o meho kapa.*
When you have removed the top cover, you remove the other cover (the shell).

(68) *O kapa bona to booboha raara, ei kou o kikisi.*
This cover (the nutshell), we break, because (it) is hard.

(69) *A ba suburaara na booboha overe ni roho bona vasu.*
Our grandparents broke coconuts (by hitting them) with a stone,

(70) *a overe repaa taboha.*
then the coconut broke.

(71) *Evehee nomana na booboha overe ni rori bono rapisi,*
But today they break coconuts (by hitting them) with a bush knife,

(72) *ore paa taboha.*
then they break.

Figure 12: *O korivahi* - The Thorny Oyster

(73) ***Kuukuhi overe***
Grating coconuts

(74) *Murinae eori repaa kuukuhi bari mene rovi bona maa nahu iana, paapao gea tabae to rake riori tea rovi.*
After that they grate them for cooking pots of fish, vegetables or whatever they want to cook in coconut cream.

(75) *A ba suburaara na kuukuhi overe ni roho bona kehaa.*
Our grandparents grated coconuts with a shell.

(76) *A hena no kehaa bona na dao riori bono korivahi.*
The name of this shellfish is *korivahi* 'Thorny Oyster'.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 13: *Kuukuhi overe* - Grating coconuts

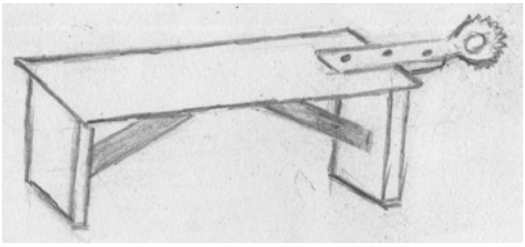

Figure 14: *A kuhi* - The grater

(77)	*O korivahi na nibusu riori,*	They made a hole into the Thorny Oyster,
(78)	*eori repaa nibusu pete bene ta naono to paa kahu vamatatopo vuru ori.*	then they also made a hole into a piece of wood that they had already carved.
(79)	*Eori repaa kisi ni bono kehaa te ta naono.*	Then they tied the shell to the piece of wood.
(80)	*Nomana a kuhi na von riori tea sitoa.*	Today they buy the grater in the store.
(81)	*Na paku maa riori bona aeana.*	It is made from iron.
(82)	*A kuhi na kuhi varutarutaa riori bona overe.*	The grater is used to grate the coconut into small pieces.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(83) *Meha maa vuri eori repaa vasibao me bari bona kaukau.*
Sometimes they *vasibao* a sweet potato with it.

(84) *Tea vasibao, ean na kuhi bata nom e ta overe bona kehaa.*
Vasibao means that you grate a piece of coconut with a seashell.

(85) *A kehaa vaa tea boon.*
A seashsell from the mangroves.

(86) *A kehaa bona na dao riori bona boen.*
This seashell is called *boen.*

(87) *Ean pasi kuhi bata nom, bean ani bata me nom e bene ta kaukau.*
You grate (the coconut flesh) when eating it with a piece of sweet potato.

(a) (b)

Figure 15: (a) *Varomo tope* - Stacking up coconut shells,
(b) *Vararana tope* - Rows of coconut shells

(88) ***O tope***
The coconut shells

(89) *O tope na vaanoto suraa ni riori tea vamahaka kavuraa.*
The coconut shells are used for lighting the fire to dry copra.

(90) *Varomo ni rori bono tope,*
(91) *eori repaa vararana ni nao bari komana inu vaamahaka kavuraa.*
They stack up the coconut shells, then they arrange them in rows in the copra drying house.

(92) *O buaku geo kukan o vararana tope.*
There are two or three rows of coconut shells.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(93)	*Eori repaa vaanoto bono suraa matano vararana tope.*	Then they light the fire at the front of the row of coconut shells.
(94)	*O tope repaa asi petepete komana nao,*	The coconut shells then catch fire one after the other,
(95)	*ore suguna be asi vakavara.*	until they all burn.
(96)	*Meha maa vuri, eori repaa vaanoto bono suraa tope,*	Sometimes they light a fire of coconut shells,
(97)	*Be asi vakavara ge asi kavu,*	and when it has burnt down or burnt to ashes,
(98)	*eori repaa pupuhu iana toon no orana tope.*	they roast fish on the charcoals of the coconut shells.

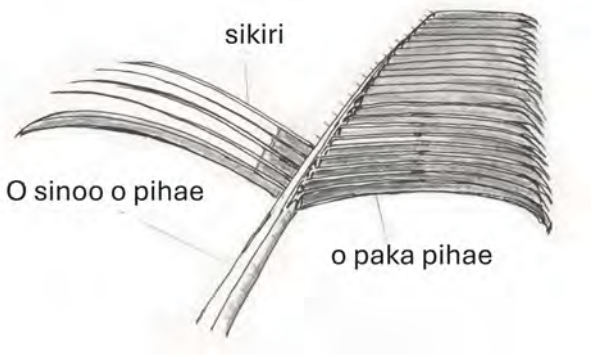

Figure 16: *Pihae* - Coconut frond

(99)	***O pihae***	**The coconut frond**
(100)	*O pihae vai o pereperee na paku riori bona bero a taba.*	The green coconut frond is used for many things.
(101)	*(1) Vin rori bona bonaa, mene dee tahii,*	(1) They plait the fishing basket for taking it to the sea,
(102)	*beori nao tea vagana tea masi tea hovuhovu iobo.*	when they go fishing on the reef to dig out sea-sausages.[1]
(103)	*(2) Vin rori bona hoi, mene vaobete tabaan vai a mahaka.*	(2) They plait baskets for storing cooked food.
(104)	*Amaa meha maa hoi vateen tagihu riori mohina,*	Other baskets they carry in backpacks to the garden in the jungle,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(105)	*eori repaa vaon maa bari bona tabaan vai a peree*	then they load them with the raw food
(106)	*eori re paa vateen voosu maa bari.*	and carry them home in backpacks.

(a) (b)

Figure 17: (a) *Vin hoi* - Plaiting baskets, (b) *Hoi* - Basket

Figure 18: *O bonaa hoohoo* - A fishing basket plaited from midribs of coconut leaves

[1]See Chapter 39.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

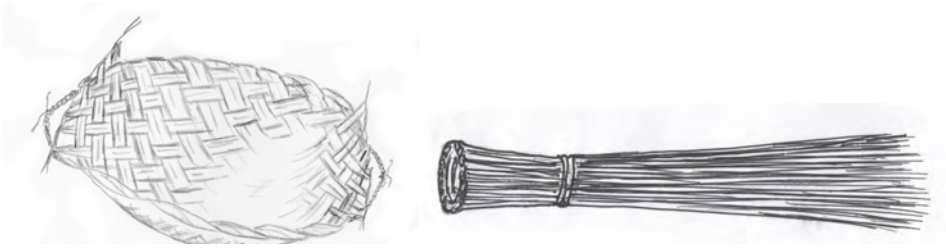

Figure 19: *Vateen voosu* - Carry sth. home in a backpack

(107)	*(3) Vin rori bona petata, mene vaobete bona menaga.*	(3) They plait the *petata*-trays for putting the tapioca dumplings on it.
(108)	*Bero amaa taba to vin riori bono pihae vai o pereperee.*	Many things are plaited from the green coconut frond.
(109)	*O sinoo no pihae vai o perepereee na gono riori,*	They get the green stalk of the coconut frond.[2]
(110)	*eori repaa kahu bono sikiri mene paku bono veveo.*	and then they scrape the midribs of the leaves for making the broom.
(111)	*O veveo na veveo riori bona maa nou vaa burihina ae komana maa inu.*	With the broom they sweep the rubbish in the backyard and inside the houses.

[2]lit. 'bone of the coconut frond'

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 20: (a) *Petata* - Tray for dumplings, (b) *Veveo* - Broom

(a) (b)

Figure 21: (a) *Rom* - Stem, (b) *Pagara* - Footstalk

(112)	*Beo pihae mahaka teo overe,*	When the coconut frond has dried up on the coconut palm,
(113)	*o pagara repaa takapa kahi bono rom,*	the footstalk comes off the stem,
(114)	*o pihae repaa kuu vo teo kasuana.*	and the coconut frond falls down to the ground.
(115)	*O pihae vai o mahaka na rava riori bene guu,*	The dry coconut frond is used for singing the pig,
(116)	*beori mei rori bari tea kaku.*	before they butcher it.
(117)	*O pagara no overe, ae o nanisi na vaanoto suraa pete ni riori.*	The footstalk of the coconut palm and the panicle are also used for lighting the fire.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 22: *Rava guu* - Singe pigs

(118)	***O pesupaava***	**The fibrous husk**
(119)	*O pesupaava mee na vaanoto suraa ni riori.*	The fibrous husk is also used for lighting fires.
(120)	*Meha maa vuri, eori repaa paku bari bona kanono.*	Sometimes they make a string from it.
(121)	*Sirisiri varutarutaa riori,*	They tear it into small pieces,
(122)	*eori repaa taneo tea vinugu bari.*	then they start twisting a string from them (the fibres of the husk).

(a) (b)

Figure 23: (a) *O pesupaava* - The fibrous coconut husk,
(b) *Sirisiri varutarutaa* - Tear into small pieces

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(123)	***O vaanomo***	**The coconut oil**
(124)	*Beara tau paku o vaanomo, eara na nao rara tea hovu overe.*	When we are about to make oil, we go and husk coconuts.
(125)	*Beara rake o vaanomo vai o beera, eara repaa hovu amaa buaku saavun ge kukan saavun overe.*	When we want much oil, we husk twenty or thirty coconuts.
(126)	*Beara hovu vakavara amaa overe, eara repaa taneo tea kuhi overe.*	When we have finished husking the coconuts, we start grating coconuts.
(127)	*Murinae eara repaaa posi overe vo tea nahu.*	After that we squeeze the (grated) coconut (so that the liquid flows) into a pot.
(128)	*Beara posi vakavara a overe, eara repaa koma hopo nio sii hum ruene tea nahu.*	When we have finished squeezing the coconut, we pour a little water into the pot.
(129)	*Eara repaa vahio a nahu teo suraa.*	Then we set the pot onto the fire.
(130)	*Be gonono, eara paa gono a sipuni, eara paa verete bata rara a overe.*	When it is boiling, we get a spoon and then keep stirring the coconut (liquid).
(131)	*Beara sa verete bata haara a overe, o konoboo repaa asi.*	If we did not keep stirring the coconut (liquid), the coconut milk would burn.
(132)	*Beara tara bea rikisi tavusu, o vaanomo repaa agaa vaavaha bata.*	When we see that the cream comes out, then the oil floats separately.
(133)	*Ean repaa vaarutaa bata o suraa.*	And you make the fire smaller.
(134)	*Bean tara beo vaanomo tean maraa.*	When you see that your oil is clear,
(135)	*ean repaa kae kahi e bono suraa.*	you lift it (the pot) from the fire.
(136)	*Beo vaanomo kunio, ean repaa isuvu e tea botori tean.*	When the oil is cold, you fill it into your bottle.
(137)	*Ean paa vaauhu nie,*	You rub it onto your skin,
(138)	*a suinman re vakasi oha.*	so that your skin shines all over.
(139)	*Bean rake o vaanomo tean re avuhu mataa,*	If you want your oil to smell good,
(140)	*ean paa osi maa o purupuru no naono to dao riori bono binaa.*	you pick the flowers of a tree that is called ylang-ylang.
(141)	*Ean paa varoava e.*	Then you put them in the sun.
(142)	*Be mahaka, ore paa avuavuhu.*	When they are dry, they smell.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(143) *Bean nahu o vaanomo tean, ean paa vaobete hopo nao o purupuru no binaa teo vaanomo, be gonono nana.*
When you cook your oil, you put the flowers of the ylang-ylang into the oil, when it is boiling.

(144) *Meha papana na vaatei rori bona paka sukuita.*
Other people put *sukuita* leaves (into the oil).

(145) *Tei nana tea peepeha aba*
It is up to everybody

(146) *tea viana bona paka naono tabae toro vaobete eve teo vaanomo,*
to select whatever leaves he or she is going to put into the oil,

(147) *o vaanomo re avuhu mataa.*
so that the oil smells good.

(148) *Eori he toro vaobete vai koa bari teo vuri nahu.*
But they must only put them into the oil when they cook them.

(a) (b)

Figure 24: (a) *A inu vaamahaka kavuraa* - Copra drying house,
(b) *Vararana tope* - Rows of coconut shells

(149) ***Kavuraa***
Copra

(150) *Beara tau paku a kavuraa,*
When we are about to make copra,

(151) *taba momohu toro paku raara,*
the first thing we must do,

(152) *eara toro rapisi roho a garasi vaa komana overe.*
we must cut the grass in the coconut plantation.

(153) *Eara repaa taneo tea unuunu overe.*
Then we start collecting coconuts.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(154) *Bean unuunu vakavara a overe, ean repaa taneo tea hovu.*
When you have finished collecting the coconuts, you start husking them.[3]

(155) *Bean hovu vakavara, ean re paa taneo tea booboha.*
When you have finished husking (them), you start breaking (them).

(156) *Bean booboha vakavara, ean repaa deedee a overe to paa booboha vuan vo inu vaamahaka kavuraa.*
When you have finished breaking (them), you carry the coconuts that you have broken to the copra drying house.

Figure 25: *Tahi kavuraa* - Pushing the copra with a stick into bags

(157) *Be kavara a deedee overe, ean repaa tasu hiava nie tea sibono.*
When all the coconuts have been carried there, you throw them up onto the roast.

(158) *Bean tasu hiava vakavara nia overe tea sibono,*
When you have finished throwing the coconuts onto the roast,

(159) *ean repaa taneo tea vaakopo.*
you start arranging (them) upside down.

(160) *Bean vaakopo vakavara a overe tea sibono,*
When you have finished arranging the coconuts on the roast,

[3]Note that *a overe* lit. 'the coconut' in (154), (156), (158), (160) is the singular form, but translated by the English plural form.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(161)	*ean repaa taneo tea vararana tope paana sibono kavuraa.*	you start placing coconut shells in rows underneath the copra roast.
(162)	*O kukan o vararana to paku raara paana sibono komana inu sibono kavuraa.*	Three rows we make underneath the roast in the copra drying house.
(163)	*Ean repaa vaanoto suraa matano vararana tope.*	Then you light the fire at the front of the row of coconut shells.
(164)	*Pasi asiu ore suguna beo vararana tope asi vakavara.*	It will catch fire until the whole row of coconut shells burns.
(165)	*O kukan geo dorana o boni to tei nae tea sibono,*	Three or four days they stay on the roast,
(166)	*bean vaanoto nom.*	when you light (the fire).
(167)	*Bean tara be ta kavuraa takapa kahi bona tope,*	When you see that a piece of copra is coming off the shell,
(168)	*ean paa kona voen, a kavuraa tean a mahaka.*	then you know that your copra is dry.
(169)	*Bea kavuraa tean mahaka,*	When your copra is dry,
(170)	*ean repaa kapa kahi e bono tope.*	you remove it from the shells.
(171)	*Bean kapa vakavara a kavuraa tean,*	When you have removed your copra,
(172)	*ean repaa mosi varutarutaa e.*	you cut it into small pieces.
(173)	*Murinae ean repaa baeke eve, bean tahi bata nom e.*	After that you put them into bags by pushing them with a stick.
(174)	*Bean tahi vahapusu o baeke kavuraa tean,*	When you have got your copra bag fully stuffed,
(175)	*ean repaa kuna pina nia matano baeke kavuraa.*	you sew up the opening of the copra bag.
(176)	*A vagegeana kiu, bean vaahae o baeke kavuraa tean tea kaara,*	The last work is that you load your bag of copra on a truck,
(177)	*ean paa nao tea vaavon Buka.*	and then you go to sell it in Buka.

(178)	***O rom overe***	**Coconut palm stem**
(179)	*O rom overe na romrom vakakato riori,*	They cut the stem of the coconut palm crosswise into short logs,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(180)	*eori repaa kepo bari mene vaanoto suraa vaa tea taotao ae tea nahu-nahu kaukau gea tabae to rake ri-ori tea nahu.*	then they chop it in order to light the fire for baking (food) in the earth oven and cooking sweet potatoes in pots or whatever they want to cook.
(181)	*Meha maa vuri o rom overe na kopaa riori,*	Sometimes they cut the stem of a coconut palm lengthwise,
(182)	*eori repaa paku bari bono inaho.*	to make the taro planting stick from it.
(183)	*Kopaa riori, eori repaa taraha tatagi kurusu bari.*	They cut it lengthwise, and then they very carefully carve the surface.
(184)	*O inaho toro raramun,*	The planting stick must be smooth,
(185)	*ahiki ta taba re tou bona kuri raara, ae ruvis bona.*	so that there is not anything (that) would prick our hand and scratch it.

Figure 26: *O inaho* - The planting stick

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 6

O atovo - The sago palm

Ruth Sima Rigamu & Joyce Maion

(a) (b)

Figure 1: (a) *O atovo* - The sago palm, (b) *Vua atovo* - Sago palm nuts

(1)	***O atovo***	**The sago palm**
(2)	*O naono vai o atovo na nebaneba komana bata ni riori.*	The sago palm is planted.
(3)	*Ei kou o naono bona eve to vaa'ave riori bona maa inu teori.*	Because it is this palm that they use for thatching their houses.

Ruth Sima Rigamu & Joyce Maion. 2026. *O atovo* - the sago palm. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 91–96. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(4) *O atovo mee, be vua, a vua nae repaa kuu, ore paa pura komana vahaa.*
Also, when the sago palm bears nuts, (and) a nut falls down, then it grows by itself again.

(5) *Beve sun rova nana tea hatana, na pura vakis nana.*
Even when it is standing in the swamp, it still grows.

(a) (b)

Figure 2: (a) *A kisi atovo* - A bundle of sago palm leaves,
(b) *Huha atovo* – Sewing the thatch

(6) ***Kosi atovo***
Cutting off the leaves of the sago palm

(7) *Bean tau kosi o atovo, taba momohu toro paku an, ean toro tagava roho o atovo.*
When you are about to cut off the leaves of a sago palm, the first thing you must do, you must fell a sago palm.

(8) *Ean repaa mosi hapehape o atovo.*
Then you cut off the branches of the sago palm.

(9) *Ean repaa kosi amaa paka atovo kahi bono sinoo vaa tobina.*
Then you cut the sago palm leaves off the stalk in the middle.[1]

(10) *Murinae, ean repaa varomo nia maa paka atovo.*
After that, you stack up the sago palm leaves.

(11) *Bean varomo vakavara, ean repaa kisi vatataunun riori.*
When you have stacked them up, you tie them together.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(12) *Ean repaa taneo mana tea dee voosu amaa kisi atovo vo vaan.*
Then you eventually start carrying the bundles of sago palm leaves home to the village.

(13) *Bea kavara na maa kisi atovo tei vaan,*
When all the bundles of sago palm leaves are in the village,

(14) *ean repaa taneo tea siri sinoo,*
you start tearing off the bones,

(15) *o sinoo vaa tobina no paka atovo to siri noman.*
it is the bone in the middle of the sago palm leaf that you tear off (the midrib).

(16) *Bean siri vakavara a peha kisi atovo,*
When you have finished tearing off (the midribs of) one bundle of sago palm leaves,

(17) *ean repaa vaoromo vaha bana amaa paka atovo.*
you stack up the sago palm leaves again.

(18) *Murinae ean repaa kaku eve, a vaamatatopo vaa tea huha.*
After that you fold them in preparation for sewing the thatch.[2]

(19) ***O sikiri***
The midrib

(20) *Amaa sikiri to paa siri vuru an tea maa paka atovo,*
The midribs that you have earlier torn off the sago palm leaves,

(21) *eve to pasi huha atovo vahaa ni noman.*
they are what you will use for sewing the sago palm leaves, i.e. the thatch sheets.

(22) *Amaa sikiri bona mee, na veveo raara bona maa nou vaa burihina.*
These midribs we also use for sweeping the rubbish in the backyard.[3]

(23) ***O rom atovo***
The stem of the sago palm

(24) *O rom atovo na romrom riori, eori repaa kopakopaa bari.*
They cut the stem of the sago palm crosswise into logs, and then they cut them lengthwise.

(25) *Murinae eori repaa taraha varaaramun bona komanae bara toon nae,*
After that they shave their inside and their outside to make them smooth,

[1]Compare (Chapter 5: 109).
[2]See Chapter 17 for details.
[3]See (Chapter 5: 110).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(26)	*ahiki ta taba re tahi ribari.*	so that nothing would prick them.
(27)	*Beve kavara, eori repaa deedee voosu mana bari vo vaan*	When it is finished, they eventually carry them home to the village
(28)	*mene paku bono baranda na inu.*	for making the floor of the house.

Figure 3: *A inu gorogoroho* – A sleeping house (under construction)

(29)	***Vaa'ave na inu***	**Thatching the house**
(30)	*Eori paa huha vakavara vaevuru bona paka atovo vai to paa kosi vuru maori,*	They have already sewed all (the thatch sheets of) sago palm leaves that they had cut off earlier,
(31)	*matatopo vai tea vaa'ave bona inu.*	in preparation for thatching the house.
(32)	*Evehee beori mei rori tea vaa'ave toro rahi obai maa roho,*	But before they do the thatching, they must get calamus canes,[4]
(33)	*bara toro mosi maa roho ta maa naono vai to pasi sun riori beori tau vaa'ave.*	and cut the poles (for the scaffold) on which they will be standing when they are going to thatch the house.
(34)	*O dorana o naono pasi vaasun vori,*	They will put up four poles,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(35) *eori repaa vaobete vananata bono meho dorana beori kisi batari bari bono kara obai.*
and then they lay another four poles across, while tying them to the standing poles with the calamus string.

(36) *Eve a poka bona to pasi sun bata nom ori*
This is the scaffold on which they will stand,

(37) *beori vaa'ave batari.*
when they are doing the thatching.

(38) *Bea poka kavara, taneo vai tea vaa'ave.*
When the scaffold is finished, they start thatching.

(39) *A kukan gea dorana aba pasi sunu tea poka,*
Three or four people will stand of the scaffold,

(40) *bea meha kukan hee hiava bona vana atovo,*
while another three pass the thatch-sheets up to them.

(41) *A dorana aba vai gina to pasi kisi bata ni nom bona vana atovo tea varuvaru na inu.*
The four people on top (of the scaffold) are the ones that will tie the thatch sheets to the rafters of the house.[5]

(42) ***A huun no atovo o aniani***
The edible sago palm mash

(43) *A abana saka tagava pinopino haari bono atovo vai to pasi koro riori mene ani.*
The people do not carelessly fell the sago palm that they will carve out for eating (the sago).

(44) *Na tara rori bono atovo vai o vahuusu vua,*
They see a sago palm close to bearing nuts,

(45) *eori repaa tagava bari*
and then they fell it,

(46) *ei kou na nata vorien o atovo bona o mataa bara o manoto.*
because they know that this sago palm is good and ripe.

(47) *Beori tagava bari, eori repaa kopaa pete bari.*
When they have felled it, they cut it lengthwise.

(48) *Murinae eori repaa koro bari bara tasu vamuramuraka bata bari.*
After that they cut it out and mash it (i.e. what they have carved out).

(49) *Eori repaa garuhu bari ruene.*
Then they wash it in fresh water.

[4]See (Chapter 11: 44ff).
[5]See (Chapter 16: 25ff).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(50)	*Beori garuhu bari, ore paa posi batari bari vo tea maa nahu vai amaa beera ge pagete.*	When they have washed it, they squeeze the water out of the mash into large pots or buckets.
(51)	*O hum vai to ani riori pasi taviana vaavaha komana bata nom.*	The part that they eat gets separated.
(52)	*Beve raka ore paa kakaavoo.*	When it is dry, it becomes white.

(53)	***Moroko vagegeana***	**Conclusion**
(54)	*O atovo o mataa, a haihai teve a beera sana en teara to vigu inu ni rara o atovo.*	The sago palm is good; its help is very big for us who use the sago palm for building houses.

Chapter 7

O sinivi – The canoe tree (Blackboard Tree)

Joyce Maion

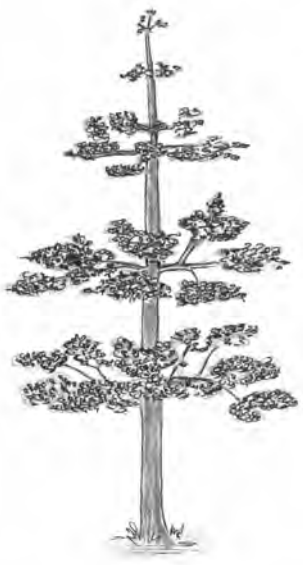

Figure 1: *O naono sinivi* - Canoe tree

Joyce Maion. 2026. *O sinivi* – the canoe tree (blackboard tree). In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 97–99. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

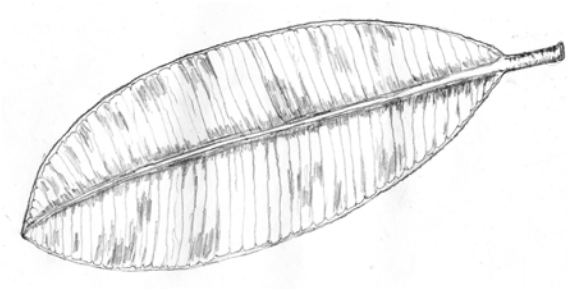

Figure 2: *Paka sinivi* - Leaf of canoe tree

(1)	***O vahutate no naono sinivi.***	**The story of the canoe tree (Blackboard Tree.)**
(2)	*O sinivi na paku raara bona maa naono to dao raara bono mara-makasi, o bio ae o naosinivi.*	We make the canoe from the trees that are called *maramakasi*, *bio* (a Ficus species) and canoe tree.[1]
(3)	*Evehee enaa kahi vahutate koa ni nom o naosinivi.*	But I'll talk only about the canoe tree.
(4)	*O naono vai o sinivi na taba beera kurusu kiri nana bona tavaan to popo rori teo toro mohina.*	This canoe tree is a very important thing for the people who live on an island.
(5)	*Bea tavaan tara bono naono sinivi o sii rutaa beve pura nana rasuu,*	When the people see a little canoe tree growing in the jungle,
(6)	*eori repaa kiu kahi ni bari,*	they clear the ground around it,
(7)	*ore paa sun nana tea mamana*	so that it stands in the open.
(8)	*Eve repaa pura hiava komana, be-ori kikira batari bari.*	Then it grows up, while they are looking after it.
(9)	*Beo meho aba tara bono naosinivi paa kiu kahi ni vori,*	If other people see that the canoe tree has been freed from the under-growth around it,
(10)	*ori paa kona voen, a aba to paa kiu kahi niu bona, eve to vaahito nana. Saka antee haa riori tea mosi.*	they recognize that the person who has done this work is the one who owns it. They cannot cut it down.
(11)	*Eori to popo rori rapana kasuana bara tea maa toro mohina, toro tei mi bono sinivi,*	Those who live along the coast or on the islands must have a canoe,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(12)	*tea tabae beori hiki, eori repaa hiki ta taba toro hae ori tea vagana.*	because if they don't, they wouldn't have anything to board and go fishing.
(13)	*Beori rake mee tea hua pahana tea maa meha maa toro mohina.*	Also, when they want to paddle across the bay to the islands.
(14)	*Bea aba hiki to naosinivi mene paku sinivi,*	If someone does not have a canoe tree for making a canoe,
(15)	*toro paku ta hanana vai toro vaahito kaakoo me to sinivi kiri bona vuu tom sinana.*	he or she should find some other way to acquire a canoe for the family.
(16)	*Meara toro kikira nio naosinivi eara mene hiki sinivi.*	We must look after the canoe tree, otherwise we would be without canoes.

Figure 3: *Sinivi suuna* - Indigenous canoe

[1]A further tree used for canoes and mentioned in the TLC is a terminalia sp. called *marakaoto*, see https://dictionaria.clld.org/units/teop-marakaoto

Chapter 8

O baneo visoas – The young breadfruit tree

Ruth Sima Rigamu & Joyce Maion

Figure 1: *Baneo visoas* - Young breadfruit tree

Ruth Sima Rigamu & Joyce Maion. 2026. *O baneo visoas* – the young breadfruit tree. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 101–103. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(1)	*O baneo vai o visoasi, o baneo vai o kare pura, to mei nana tea manoto*	A young breadfruit tree is a breadfruit tree that has only recently started growing and is not mature yet.
(2)	***Mosi naono baneo***	**Cutting breadfruit trees**
(3)	*Bea abana tau paku bona kave goroto,*	When people are about to make a turtle net,
(4)	*eori repaa paku bona vahiihio.*	they have a meeting.
(5)	*E beera repaa sue,*	Then the chief says,
(6)	*"Bara tobara visoasi, eara kahi paku rara a kave goroto.*	"Well, young boys, we are going to make a turtle net.
(7)	*Eam toro nao tea mosi ta maa naono baneo vai ta maa rutarutaa."*	You must go and cut some small breadfruit trees."
(8)	*Eori repaa nao.*	Then they go.

(a) (b)

Figure 2: (a) *Kapa baneo* - 'Cover' of the breadfruit tree,
(b) *Sui* - Ark Clam, used to scrape the fibres of the breadfruit tree

(9)	***Hihi bona kapa baneo***	**Pulling off the cover of breadfruit trees.**
(10)	*Beori mosi vakavara maa bona naono baneo vai a rutarutaa,*	When they have finished cutting the small breadfruit trees,
(11)	*eori repaa dee voosu maa bari.*	they carry them home.
(12)	*A naono baneo vai a rutarutaa na mataa nana, suku bona na kobusu nana,*	The small breadfruit trees are good, because they are moist.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(13)	*me na antee nana tea tahihi vamataa.*	and (the fibres) can easily be peeled off.
(14)	*Beori dee voosu maa bari,*	When they have brought them home,
(15)	*eori repaa taneo tea kahu bono kapa vaa toonuna,*	they start scraping off the top cover (i.e. the bark),
(16)	*beori varoava batari bari.*	while they are putting them (the trees) in the sun.
(17)	*Beve raka, eori repaa hihi pete bari.*	When they are dry, they pull off the fibres.
(18)	*Eori repaa varoava vaha bana bari, eve re kiksi.*	Then they will put them in the sun again, so that they become strong.
(19)	*Beve mahaka vakavara,*	When they are completely dry,
(20)	*eori repaa kahu mana bono kara baneo bona kehaa*	they eventually scrape the breadfruit tree fibres with a shell
(21)	*to dao riori bona sui.*	that they call *sui* (Ark Clam)
(22)	*Murinae eori repaa sirisiri varutaa bono kara baneo,*	After that they tear the breadfruit fibres into small strips,
(23)	*matatopo vaa tea vinugu.*	in preparation for twisting (strings).
(24)	***Kave goroto***	**Turtle net**
(25)	*Beori vinugu vakavara bona kanono,*	After they finished twisting the string
(26)	*eori repaa taneo tea huha bona kave goroto.*	they start tying the turtle net.[1]
(27)	*Kavara na aba vai to huha vatotoena bata maari,*	Everybody who is involved in tying (the net)
(28)	*na vaa'antee bata maari bono peho mata kave.*	supplies one mesh of the net.
(29)	*Evei o vahutate no baneo visoasi.*	So, this is the story of the young breadfruit tree.

Chapter 10

Koverau, kururu, koopu - Three kinds of bamboo

Ruth Sima Rigamu & Joyce Maion

(a) (b) (c)

Figure 1: (a) *Koverau*, (b) *Kururu*, (c) *Koopu*

Figure 2: *Koverau*

Ruth Sima Rigamu & Joyce Maion. 2026. *Koverau, kururu, koopu* - three kinds of bamboo. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 107–111. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 3: *Makaree* - Fishing spear called *makaree*

(1)	*O koverau na pura nana rasuu.*	The *koverau* bamboo grows in the jungle.
(2)	*O* koverau *saka tau pura vatotobin tamuana bata haana.*	The *koverau* bamboo might not always grow straight.
(3)	*Tau hoa vanaavihu batana bara tau obete gunaha suku batana bona maa hum gunaha.*	It might grow in the opposite direction and lie on the ground following downwards the slopes of a mountain.
(4)	*Ei be pura tea maa vaereere.*	This means that it grows on the edges of mountains.
(5)	*Pura vageegeno batari amaa meha.*	Some grow crookedly.
(6)	*O koverau na vaarutaa ki nana bono kururu.*	The *koverau* bamboo is smaller than the *kururu* bamboo.
(7)	*O naono o mataa, na paku raara bono tahitahi.*	It is a good plant, we make spears (from it).
(8)	*Bea otei tau nao tea mosi koverau,*	When a man is about to cut *koverau* bamboos,
(9)	*toro tara vamataa kurus maa bona maa aba vai*	he must have a very good look at the ones
(10)	*to pasi mosi maa nae mene o makaree teve.*	that he will cut for his fishing spear.
(11)	*Be dee voosu maa bona dee koverau teve,*	When he brings his load of *koverau* bamboos home,
(12)	*ore paa vaasun bona matana inu teori,*	he stands them up in front of their house,
(13)	*ei ore roava nana.*	so that they are exposed to the sun.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(14) *Be mahaka, ore paa aeae, ore paa nana mana bari teo suraa.*
When they dry up, they become light, and then they (the men) warm them over the fire.

(15) *Pasi nana bata nom ori, beori menamenaa vaatotobin batari bari.*
They will warm them, while they are bending them straight.

(16) *Beve totobin, ore paa kahu bono kosi no koverau,*
When they (the bamboos) are straight, they scrape the bottom of the *koverau* bamboos,

(17) *vaamatatopo vo tea vaatopo bono kuna sikiri.*
and prepare them for sticking the spikes (into them).

(18) *Vaatopo vai bona maa kuna sikiri,*
Now they stick in the spikes,

(19) *ore paa pam bari bona kanono.*
and fasten them with a string.

(20) *Be kavara, erau are paa pokaa e bono makaree.*
When this is finished, then we call it *makaree* 'fishing spear'.

(21) *Bea abana nao tahii, toro ato momohu tea makaree teori mene tahi vamate bona iana vai a beera to pasi rahi riori tea kanono.*
When the men go fishing, they must first get their fishing spears for spearing a big fish to death that they will pull (out of the water) with a string.

Figure 4: *Ato teo makaree* - Holding the *makaree* spear

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 5: *Kururu*

(22)	*O kururu na vaapeha mi nana bono koverau.*	The *kururu* bamboo is similar to the *koverau* bamboo.
(23)	*Amaa naono vai to tei me rori bona maa navanava riori: koverau, kururu, koopu, tovu, tabuana.*	The plants that have bars (separated by knots) are: the *koverau*, *kururu* and *koopu* bamboos, the *tovu* sugar cane and the wild sugar cane.
(24)	*O kururu na isuisuvu ruene ni riori mee.*	The *kururu* bamboo is used for fetching water.
(25)	*Beori tau isuvu ruene ni bari, na dona rori bona kukan a nava kururu.*	When they are going to fetch water with it, they pierce (the knots between) three bars.
(26)	*Murinae, eori repaa gono bene ta naono eta bebeahu bara kikis*	For this they get a long and strong stick
(27)	*to tahitahi nibusu nao riori bona buaku a nava kururu vaa gina,*	with which they pierce holes into the knots of the two top *kururu* bars,
(28)	*beori goe bona nava vaa taeno kururu.*	while leaving the bar at the bottom of the *kururu* bamboo intact.
(29)	*A ruene re goe tea oro tavusu.*	Then the water would not flow out.
(30)	*O koopu saka pura vamataa haana rapana kasuana ge tea suiri,*	The *koopu* bamboo does not grow well near the beach or in the lowlands,
(31)	*na pura vamataa nana tea voora.*	it grows well in the mountains.
(32)	*Meha maa vuri a ta vaan vai to tei rori tea maa vaan vahiava na vaamahaka rori bona tabaan teori komano koopu.*	Sometimes the people who live in the mountain villages cook their food in the *koopu* bamboo.
(33)	*Na mosi maari bona maa nava koopu,*	They cut some bars of *koopu* bamboo,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(a) (b)

Figure 6: (a) *Koopu*, (b) *Taboo a inu* - Walling a house

(34)	*eori repaa apeo bona tabaan tabae to rake riori tea apeo: e guu, manii, kaukau, gea tabae to rake riori tea an.*	and then they cook in the bamboo whatever food they like to cook in the bamboo: pork, possum, sweet potatoes or what they like to eat.
(35)	*O koopu vai o peree to apeo riori bona tabaan.*	It is the green *koopu* bamboo in which they cook the food.
(36)	*Eori repaa vaamahaka bari teo suraa.*	Then they let it simmer on the fire.
(37)	*Beori vaatoka bono koopu teo suraa,*	When they put the *koopu* bamboo onto the fire,
(38)	*toro vavereverete bata ni rori bono koopu to mene asi.*	they must repeatedly turn the *koopu* bamboo around so that it won't burn.
(39)	*Eara na voni rara a koopu tea ta vahiava mene paku bono takinima na maa inu teara.*	We buy the *koopu* bamboo from the mountain people to make the walls of our houses.
(40)	*Beara taboo a inu teara bono takinima ore paa tara vamataa.*	When we wall our house with bamboo walls, it looks beautiful.[1]

Chapter 11

Kara naono – Vines, aerial roots, fibres and strings

Ruth Sima Rigamu & Ondria Tavagaga

(a) (b) (c)

Figure 1: (a) *Kara aisi* - A weed, (b) *Kara ariono* - A vine, (c) *Kara kanono* - Some strings[1]

(1)	***Kara aisi***	**The weed called *aisi***
(2)	*O kara aisi, eve o meho kara naono to abeabe batana tea maa kasuana vaa Hanatana.*	The *aisi*, it is a string-like plant that is creeping on the beaches of Hanatana.
(3)	*O kara aisi bona na tei nana kasuana.*	This *aisi* is found on the ground.
(4)	*Ahiki vira ta kiu teve vo teara.*	Actually, it does not have any use for us.

[1]The word *kara* is a kind of classifier for plants and other things that look like a string. In Adjectival Phrases that relate to a *kara*-N compound as a predicate or modifier this classifier is repeated, see (11:48 and 11:78).

Ruth Sima Rigamu & Ondria Tavagaga. 2026. *Kara naono* – vines, aerial roots, fibres and strings. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 113–123. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(5)	***Kara ariono***	***Ariono* vine**
(6)	*O kara ariono mee, eve o meho kara koris o kara mataa.*	The *ariono* vine, it is a good vine.
(7)	*Eve to vagana ni ria abana tahii.*	It is used by the men for fishing in the sea.
(8)	*Beori nao tahii, eori toro gono bona kara ariono mene a vavaatoa.*	When they go (fishing) in the sea, they must get the *ariono* string for kite-fishing.[2]
(9)	*Na paku vavaatoa ni rori bona kara ariono.*	They do kite fishing with the *ariono* string.

(10)	***Kara bao***	**Grass**
(11)	*A kara bao eve a tabaan teo burumakao.*	Grass is the food of cows.
(12)	*Nabunuu roho enam ahiki to kara bao.*	In the past we did not have any grass.
(13)	*O burumakao he nomaa koa, meori paa ma neba bata kiri bari bono kara bao.*	But the cows came, and they planted the grass for them.
(14)	*Mea naba kasi hanana paa dee taataana bata maa bari.*	And the road builders brought it here along the coast.
(15)	*Rerau, mepaa raha bata maa.*	And so, it spread out here.
(16)	*Me nomana, amaa mohina teara na hapus kurus nana tea kara bao.*	And today our gardens are full of grass.

(17)	***Kara kave***	**Net vine**
(18)	*O kara kave, eve o meho kara koris vai to tei me nana bona kiu a beera sana.*	The net vine is a vine that has a very important function.
(19)	*Nabunuu roho beo kara kave vai hiki nana,*	In the past, when there was not any net vine,
(20)	*ahiki koa ta an iana teara.*	we could not eat any fish.
(21)	*Eikou o kara kave to paku riori bona kanono,*	Because (it was) the net vine from which they made the string,

[2]See (34:8). When used as a name for the vine, *kara ariono* is a N3-construction; but when used in the sense of 'string made from *ariono* vines' it is a N2-construction.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(22) *ore paa paku pete bari bona kave mene vagana.* and then they made the net for fishing from it.[3]

(a) (b) (c)

Figure 2: (a) *Kara koris* - Vine, (b) *Kara kuskus* - Passionflower, (c) *Obai* - Bengal Calamus

(23) ***Kara koris*** **Vine (generic term)**

(24) *O kara koris, eve o meho kara naono.* The vine is a string-like plant.

(25) *O kara koris bona na tei pete nana rasuu ei mohina.* The vine also grows in the jungle, in the garden.

(26) *O kara koris bona na vaahiroo ni raara, na dao raara bono kara koremana.* This vine we use for soup, we call *koremana* vine.

(27) *Bea moon vahuhu, ore paa vaahiroo bari bono kara koremana, ei bea huhu na moon vagitagita nana,* When a woman gives birth, they give her the *koremana* vine to drink as soup, if the woman's breasts are empty,

(28) *a huhu nae repaa hapus.* so that her breasts become full.

(29) *A pate koris bona o paapao.* This bunch of vines is a vegetable.

(30) *Eve o paapao o mataa.* It is a good vegetable.

(31) *"Hiroo o kara korisi bona."* "Drink this vine as a soup."

(32) ***Kara kuskus*** **Passionflower**

(33) *O kara kuskus eve mee o meho kara koris to tei nana mohina.* The passionflower is a vine that is found in the garden.

[3]See (29:37ff).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(34)	*O kara kuskus bona na vuavua nana.*	The passionflower bears fruit.
(35)	*Bea vuanae manoto, ore paa tomtomon,*	When its fruit matures, it becomes orange,
(36)	*ei be vuri.*	this means that it is ripe.
(37)	*"Enaa na rake nom tea ani to vua kuskus.*	"I want to eat a passionflower fruit.
(38)	*O vua kuskus bona o vua mataa kurus."*	This passionflower fruit is a very good fruit."
(39)	*O kara kuskus na tei nana rasuu.*	The passionflower is found in the jungle.
(40)	*Na hiri batana tea maa pasunana tenam.*	It is creeping at the head of our gardens.
(41)	*Be vua, ore paa hana batana teo kara nae.*	When it bears fruit, it hangs on its vines.
(42)	*Beove vuri ore paa tomtomon.*	When it ripens, it becomes orange.
(43)	*A vua no kara kuskus a vua mataa kurus.*	The fruit of the passionflower is very good.

(44)	***Kara obai***	**Calamus cane, Sweet Flag**
(45)	*O obai, a kiu nae a beera kurus.*	The calamus cane, its use is very important.[4]
(46)	*O kara obai, eve to paku riori bona sia bara na paku rori bona teevoro ae a teebana.*	The calamus cane is used for making chairs and also used to make tables and beds.
(47)	*O kara obai, eve mee to kisi ni riori bona inu bara tea vaave mee.*	The calamus cane is also used for lashing (the posts and beams of) the house and also for thatching (the roof).
(48)	*O kara obai kou o kara kikis kurus. Na hiri nana teo kasuana, ore paa abe hiava teo naono.*	The calamus cane is very strong. It creeps on the ground, and then it creeps up a tree.
(49)	*O paka obai na toutou nana.*	The calamus leaf is prickly.

[4]See (Chapter 6: 32ff; Chapter 17: 38).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(a) (b) (c)

Figure 3: (a) *Veresun* - Wild banana, (b) *Kara orovi* - Black sheaths, (c) *Vin maata* - Plaiting mats

(50)	***Kara orovi***	**Black sheath of the wild banana**
(51)	*O kara orovi na kurus maa raara teo veresun.*	The black wild banana sheath we cut off the wild banana plant.
(52)	*O veresun bona o paru na dao raara bono orovi.*	This wild banana plant (with) black (leaf sheaths), we call *orovi.*
(53)	*Are paa dee voosu mae,*	(When we have cut off a black sheath,) we carry it home,
(54)	*are paa ma kahu e bona kehaa.*	and scrape it with a seashell.
(55)	*Kahu vakavara, are paa varoava,*	After having scraped (it),
(56)	*are paa varoava e, ore raka.*	we put it in the sun so that it becomes dry.
(57)	*Be raka, are paa rigunue,*	When (it) is dry, we roll it up,
(58)	*matatopo vaa tea vin maata.*	in preparation for plaiting mats.
(59)	*Are paa oroorovi nio orovi bona teo vonaha.*	Then we plait this black sheath into a pandanus mat.[5]
(60)	***Kara Pihi***	**Farting Weed**
(61)	*O Kara Pihi o meho subui vaa komana vaan.*	The Farting Weed is a weed in the village.

[5]See (Chapter 13: 2).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(62)	*O hena Kara Pihi na tei me nana bona ei to kao vo nae.*	The name Farting Weed has been given to it for the following reason.
(63)	*Bean kara e, saka manin takara kurus haa maana, ore antee, bean pihi komana.*	When you try to uproot it, it won't get uprooted, until you fart.

Figure 4: *Kara pihi* - Farting weed

(64)	***Kara rovivi***	***Rovivi*, a kind of sappy vine**
(65)	*O kara rovivi na tei me nana bono marasin.*	The *rovivi* vine contains medicine.
(66)	*Bean kiu bata nom, ean re mosi vohara a mooman,*	When you work and accidentally cut your leg,
(67)	*ean toro gono o kara rovivi,*	you must get a *rovivi* vine,
(68)	*ean re buhaha e.*	then rub it into pulp in your hands.
(69)	*Ean repaa posie bona mosi.*	Then you squeeze the juice out onto the cut.
(70)	*Omana a vihii a beera,*	Sure, the stinging pain is great,
(71)	*evehee pasi too vaha koana a mosi tean.*	but your cut will heal.
(72)	*Eve a taba to mataa suku nae.*	That's why it is good.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(73) *O hum to hata kaakoo nana o kara rovivi, bean mosie, ore paa sapusaka vo tea maa mataman.*
A situation in which the *rovivi* is bad is when you cut it, and the liquid splashes into your eyes.

(74) *O kara rovivi mee saka kikis haana.*
Also, the *rovivi* vine is not strong.

Figure 5: *Kara rovivi*

(a) (b)

Figure 6: (a) *Kara rovivi*, (b) *Buhaha* - Rub leaves into pulp with your hands

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(75)	***Kara raviana***	***Raviana* vine**
(76)	*O kara raviana, eve o kara korisi to pampam sinivi ni riori.*	The *raviana* vine, it is a vine that they use to tie up the canoe.
(77)	*Nabunuu komana vai roho suguna vai nomana.*	In the past until today.
(78)	*O kara koris bona o kara kikis kurus,*	This vine is very strong,
(79)	*ei to rake suku riori tea pam sinivi.*	this is why they want (it) for tying up canoes.[6]

(a) (b)

Figure 7: (a) *Raviana* - A vine, (b) *Kara raviana* - *Raviana* string

(80)	***Kara ruhu***	**Aerial roots of the Bengal Ficus**
(81)	*O ruhu eve o meho naono to sun nana rasuu.*	The Bengal Ficus is a tree that stands in the jungle.
(82)	*O naono bona o beera sana.*	This tree is very big.
(83)	*Eve he o kara berobero.*	It has many aerial roots.
(84)	*O kara nae na ikuu gunaha taneo maana gina tea maa pea nae.*	Its aerial roots hang down from its branches high up.
(85)	*O kara ruhu na topo nana gina ore paa hana gunaha maana vo putaa.*	The aerial roots of the Bengal Ficus stick there high up and hang down to the ground.

[6]The *raviana* vine is also used for the *kakavei* 'bamboo frame net', see (Chapter 29: 63ff.)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(86) *O ana ruhu mee na tei me nana bono porete vaa tea kamis nihi.*
The root of the Bengal Ficus contains medicine against tooth ache.

(87) *Koto vamuramuraka o sii ana ruhu vai o sii rutaa, ean repaa vaatei e teo hum takepo.*
Bite off and soften a little piece of the Bengal Ficus root, then you put it on the place (where a piece of the tooth) split off.

Figure 8: *Ruhu* - Bengal ficus

(88) ***Kara urisi***
Strap of a wild banana sheath

(89) *O kara urisi eve to vateen ni raara.*
The wild banana sheath strap, we use for carrying the backpack.

(90) *Eara na gono rara o urisi teo veresun.*
We get the sheath from the wild banana plant.

(91) *A veresun na tei rori rasuu.*
The wild banana plants are in the jungle.

(92) *Eara na kakapa rara o veresun.*
We pull (the sheath) off the wild banana plant.

(93) *Are paa varoava e ore mahaka.*
Then we put it in the sun, so that it becomes dry.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(94) *Be mahaka, eara re garuhu e, ei beara viru bata rae.* When (it) is dry, we wash it while we are rolling it up.

(95) *Mahaka vai ei, eara repaa gono tea vateen nie.* Now (it) is dry, and we get it for carrying the backpack.[7]

(a) (b) (c)

Figure 9: (a) *Veresun* - Wild banana, (b) *Kara urisi* - Wild banana sheath, (c) *Kakapa o veresun* - Pull (the sheath) off the wild banana plant

(a) (b)

Figure 10: (a) *Varoava* - Drying in the sun, (b) *Vateen* - Carrying the backpack

[7]The strap for carrying backpacks can also be made from hibiscus fibres, see (12:8).

Chapter 12

O kara roge – Hibiscus fibres for making strings

Joyce Maion

(a) (b) (c)

Figure 1: (a) *O roge* - Coastal Hibiscus, (b) *O taporohi roge* - A hibiscus flower, (c) *Kara roge* - Strings made of the hibiscus fibres

(1)	*Bean rake nom to kara roge,*	If you want a string made of hibiscus[1] fibres,
(2)	*ean toro nao momohu tea mosi to vehu roge vai o kobus.*	you must first go and cut a moist hibiscus twig.
(3)	*O vehu roge vai na tahihi vakahu nana.*	The fibres of hibiscus twig are quickly peeled off.

Joyce Maion. 2026. *O kara roge* – hibiscus fibres for making strings. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 125–126. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(4)	*Ean repaa hihi a kapa nae.*	Then you peel its cover off.
(5)	*Hihi kahii bono naono nae.*	You peel it off its wood.
(6)	*O kapa vai to hihi noman, eve to dao raara bono kara roge.*	The cover that you peel off, we call hibiscus fibre.
(7)	*Benam hiki to urisi mene varoto bona vateen,*	When we don't have a wild banana sheath to strap up the backpack,
(8)	*enam repaa varoto nio kara roge.*	we strap it up with a strap made of hibiscus fibres.
(9)	*Meha maa vuri, eori repaa paku bari bono sikioti vaa teo hagi.*	Sometimes they make the skirt for a dance from them.
(10)	*Hihi rori bona kapa roge,*	They peel the hibiscus covers off,
(11)	*eori repaa taono ni bari tahii.*	then they put them in the sea, weighing them down with stones.
(12)	*Beo kapa roge vai o pereperee koava,*	When a green hibiscus cover rots,
(13)	*eori repaa gono takin kahi bari bona tahii.*	they get it out of the saltwater.
(14)	*Murinae eori repaa garuhu bari,*	After that they wash it,
(15)	*eori repaa varoava bari.*	and put it in the sun.
(16)	*Beve raka, eori repaa sirisiri varutarutaa bari.*	When it is dry, they tear it into fine strips.
(17)	*Eori repaa paku bari bono garasi sikioti mene hagi teori.*	Then they use them for making their grass skirt for dancing.

Chapter 13

Karaa – Pandanus

Ruth Sima Rigamu

(a) (b) (c)

Figure 1: (a) *Karaa* - Pandanus, (b) *Varoava* - Letting dry in the sun, (c) *Vin vonaha* - Plaiting a mat

(1) ***Karaa***

(2) *O karaa to vin vonaha ni ria ta Teapu.*

(3) *Na kosi riori ore paa kahu bono sinoo vaa toon no paka karaa, ore paa vaameapa bari tea roava.*

Pandanus

The pandanus is used by the Teop people for plaiting mats.

They cut the pandanus leaves and then scrape the midrib on the back of the pandanus leaves and let them become flexible in the sun.

Ruth Sima Rigamu. 2026. *Karaa* – pandanus. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 127–130. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(4)	*Me meapa, ore paa rava bari ge eori repaa nahu bari bona tahii.*	And (when the pandanus leaves are) flexible, they heat them over the fire, or they cook them in salt-water.
(5)	*Murinae eori repaa varoava bari.*	After that they put them in the sun to dry.
(6)	*Varoava riori, antee beo karaa gaoho komana.*	They put them in the sun until the pandanus is bleached.

(a) (b)

Figure 2: (a) *Karaa toutou* - Thorny pandanus,
(b) *Paka toutou* - Thorny leaves

(7)	***Karaa Toutou***	**Thorny Pandanus** (*Pandanus spiralis*)
(8)	*O karaa toutou na bero kurus nana kasuana teara.*	The thorny pandanus is very common in our coastal area.
(9)	*Pura pinopino batana mee,*	It grows everywhere without any care.
(10)	*ei kou o vua nae to oro binubinu batana tahii.*	because its seeds float around everywhere in the sea.
(11)	*O karaa bona na vaapeha mi nana bono karaa vai o hiki toutou.*	This pandanus is similar to the pandanus without thorns

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(12) *A taba to vaavaha koa ni nana teo buo karaa bona, o meho na tei mi nana bono toutou teo buo vavaarihi bara toon nae, o meho me ahiki.*
The only thing that is different with these two kinds of pandanus is that one has thorns on the two sides of the leaf and on its back, but the other one does not.

(13) *Eara na kahu rara o buo vavaarihi no paka karaa bara toon nae.*
We scrape the two sides of the leaf and its back.

(14) *O karaa bona mee o gagaoho pete kurus. O karaa bona o mataa.*
This pandanus is also very white. This pandanus is good.

(15) *Na vin hoi bara vonaha ni ria maa moon.*
The women use it for plaiting baskets and mats.

Figure 3: *Karaa vaa Solomon* - Pandanus from the Solomon Islands

(16) ***Karaa vaa Solomon***
Pandanus from the Solomon Islands

(17) *O karaa vai o hiki toutou na deedee maa rohori Solomon, meara na dao koa rara e bona karaa vaa Solomon.*
The pandanus without thorns was brought from the Solomon Islands, and we just call it the pandanus from the Solomons.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(18)	*Ahiki to toutou teve.*	It does not have any thorn.
(19)	*Eara na kahu vatamee koara a toon na maa paka karaa, ore tamee tea rigunu ei beara tau nahue.*	We only scrape the back of the pandanus leaves to make them flexible so that they are flexible to wind them up when we are about to cook them.
(20)	*O karaa bona o gaohogaoho kurus, o tamee kurus mee.*	This pandanus is very white, but also very flexible.
(21)	*Na mataa kurus nana tea vin vonaha, hoi ae haata.*	It is very good for plaiting mats, baskets and hats.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 14

Taovu – The giant pandanus and the hood

Ruth Sima Rigamu & Joyce Maion

(a) (b)

Figure 1: (a) *Taovu* - Giant pandanus, (b) *Taovu* - hood

Ruth Sima Rigamu & Joyce Maion. 2026. *Taovu* – the giant pandanus and the hood. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 131–132. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(1)	***Taovu***	**The giant pandanus**
(2)	*O taovu na neba ni raara beve a rutaa.*	We plant the giant pandanus, when it is small.
(3)	*Rerau ore paa pura hiava komana bata maa.*	And then it grows up by itself.
(4)	*Be pura hiava, a paka nae repaa bebeahu bata maa,*	When it grows up, its leaves become long,
(5)	*ore paa taneo mee iku gunaha.*	so that they also start hanging down.
(6)	*Beo taovu pura hiava vaantee, ore paa vakavakarapi.*	When the giant pandanus has grown up to a certain point, it branches out in all directions.
(7)	*Bean rake ta mosi hape to peho peana, ean repaa mosi e.*	If you want to cut off a branch, then you cut it.
(8)	*Rerau ean paa kosi a paka no taovu meno taovu tean.*	And so you cut off the leaves of the giant pandanus for your hood.
(9)	*Bean kosi vakavara a paka taovu, ean paa kaakaru e bono pesupaava, bean varoava bata nom eve.*	After you have cut off the pandanus leaves, you scrape off the thorns with a coconut husk, when you put them in the sun.
(10)	*Bea paka taovu tean meapa, ean paa aha e bono kakaamuru.*	When your giant pandanus leaves are flexible, you scrub them with white sand.
(11)	*Ean repaa varoava vahabana e.*	Then you put them into the sun again.
(12)	*Bea paka taovu tean kakaavoo, ean paa taatagi e ore paa matatopo vo tea kuna bono taovu.*	When your giant pandanus leaves have turned white, you prepare them, so that they are ready for sewing the hood.
(13)	*O taovu na kuna riori bono sigauva roge, na matatopo varaba komana riori.*	They sew the hood with a thread made of hibiscus fibres that they have prepared themselves in advance.
(14)	*O taovu na uvuuvu ni riori teo vuri to siko nana a huan.*	They wear the hood, when the rain is pouring down.

Chapter 15

Introduction

Ulrike Mosel

The first documents of Teop architecture seem to be a photograph of a village at the Teop Harbour that was taken by Richard Parkinson, see Figure 1a. and the photographs by Schaffrath around 1900[1], see Figure 1b and Figure 1c.

(a) (b) (c)

Figure 1: (a) A village at Teop Harbour, (b) "Typical beach village on Bougainville", (c) "Typical construction of a dwelling house on Bougainville"

The anthropologist Beatrice Blackwood, who did fieldwork in Buka and Northern Bougainville for 12 months in 1929-1930, reports that the houses of the first type (Figure 1a) were predominant "in most places of Bougainville" where they were "built on bare earth, thatched with sago-palm leaves in the shape of a broad

[1]Parkinson 1907: Fig. 75, "Dorfszene am Ernst-Günther-Hafen (Nord Bougainville)"; Schultze 1909: Fig. 38, "Typisches Stranddorf auf Bougainville"; Fig. 51, "Typischer Wohnhausbau auf Bougainville." K.J. Schaffrath worked as a construction engineer on Bougainville Island for the colonial German government.

Ulrike Mosel. 2026. Introduction. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 135–137. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

gothic arch, with the roof almost touching the ground on both sides" (Blackwood 1935: 22). The construction of houses raised on piles was introduced by missionaries (Figure 1c). When I was doing my last fieldwork in 2014, houses of the second and the third type were still in use, see Figure 2a and Figure 2b.

(a) (b)

Figure 2: (a) *A inu vaa putaa* - A house on the ground,
(b) *A inu vaa gina* - lit. A house on stilts

The first type of house (Figure 1a) is remembered by the Teop people as *tagoana* 'the chief's house', see Figure 3a, and is used as a ceremonial hut during large feasts, see Figure 3b. Blackwood (1935: 383-388) describes this traditional house type with two excellent photographs and an index of terms in the Kurtatchi language that denote plant materials and parts of the house. Some of them are etymologically related to the corresponding Teop terms, e.g. *inu* 'hut'. The Teop Language Corpus only contains a few mentions of *tagoana* in the sense of 'house of a chief' and 'ceremonial hut'.

(a) (b) (c)

Figure 3: (a) *Tagoana* - House of a chief, (b) Ceremonial hut,
(c) Inside the ceremonial hut

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Shoffner (1976: 294-295) whose description of the traditional type of house is similar to that of Blackwood mentions that "this type of house is built very occasionally today for ceremonial purposes but never to live in".

In the following chapters Enoch Horai Magum describes how in 2005 *inu goro-gorohu* 'sleeping houses' were exclusively build from local plant materials, but at that time houses were also built of a combination of local and imported materials. Shoffner (1976: 295) reports, "The roof is most commonly made of sago thatching although today, more people are acquiring metal roofs partially because they are necessary for the collection of water in tanks or any type of receptacle available."

Figure 4a and Figure 4b show a house with a roof made of corrugated iron, modern windows, stairs and a door, but its walls are made of plaited bamboos in a traditional way, see Chapter 19.

(a) (b)

Figure 4: *A inu vaa nomana* - A modern house

In contrast to the European dwelling house, the Teop 'sleeping house' does not have a kitchen, toilet or bathroom.

Chapter 16

A sinoo na inu – The frame of the house

Enoch Horai Magum

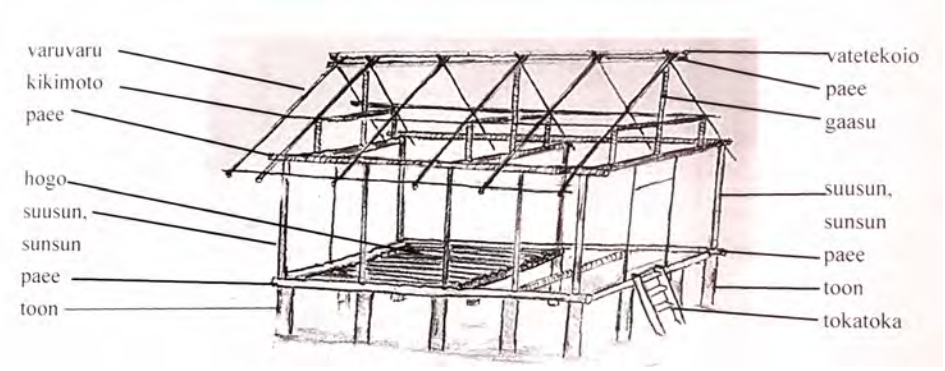

Figure 1: *A sinoo na inu* - The timber frame (lit. skeleton) of the house

(1)	*Amaa humhum na inu gorogoroho vaa Teapu*	Some parts of the Teop sleeping house
(2)	***Toon***	**Post**
(3)	*A ta naono vai a ta beera, bebeahu ae kikis to toon riori bona inu,*	A big, long and strong pole that is used as a post of the house,
(4)	*ge eve o naono to dee maana bona inu.*	or, (put differently,) it is a pole that carries the house.
(5)	*Bea ta tovihi, na tei koana tea beera na inu.*	How many, that depends on the size of the house.

Enoch Horai Magum. 2026. *A sinoo na inu* – the frame of the house. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 139–142. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(6)	*Evehee sa gonogono vahogo haari,*	But they do not get them in a careless way,
(7)	*ahiki, o naono to mataa ki nana bono toon o toraha.*	no, the tree that is good for a post is the New Guinea Teak.
(8)	*O naono o kikis ae o vaanagu koava.*	The wood is strong and resistant to rotting.
(9)	***Paee***	**Horizontal beam** (joist, tie beam, and the main ridge pole)
(10)	*O naono o bebeahu to vaobete riori toon na maa paos.*	The long beam that is put on top of the posts.
(11)	*Evehee toro naono vai haabana o kikis, tabae eve to kahi dee nana bono paranda.*	But it must again be a strong beam, because it will carry the floor.
(12)	*A ta tovihi? Na tei koana tea bero tea toon.*	How many? That depends on the number of the posts.
(13)	*O hum to teitei bata nae mee, ei toon na maa sunsun.*	A place where they also lie, this is on top of the posts called *sunsun* (the standing posts).
(14)	***Sunsun, suusun***	**Standing post**
(15)	*O sunsun o naono to sun nana toon na maa paee.*	The standing post is a pole that stands on the horizontal beams.
(16)	*O meho paee repaa obete taono vaha ni maa bona,*	And another horizontal beam lies on it.
(17)	*O varuvaru repaa obete maa toon nae.*	And then the rafter lies on top of it (the horizonal beam).
(18)	*Eve o naono to kahi ato ni nana bono hum inu vaa gina.*	It is the pole that holds the upper part of the house.
(19)	***Gaasu***	**King post**
(20)	*O gaasuu o naono to vavaasun riori tobina inu toon no paee.*	The kingpost is the pole that they stand in the middle of the house on top of the tie beam.
(21)	*Beo tovihi? Na tei koana tea bebeahu na inu.*	How many? That just depends on the length of the house.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(22) *Evehee a kiu tea maa naono bari mene dee*
(23) *ge eve to vaatoka maa riori bono peho paee.*
The function of these poles is to carry (the main ridge pole) or, (in other words,) it is the one on which they make the main ridge pole perch.

(24) *Amaa ta naono bari mee amaa ta kakato koa.*
These poles (lit. pieces of wood) are also quite short.

(25) ***Varuvaru***
Rafter

(26) *A varuvaru eve a naono to kahi vaobete mau ori toon no paee vai*
(27) *to paa vaobete vori toon na mata gaasuu.*
The rafters are the beams that are laid on the main ridgepole (lit. horizontal beam) that is laid on to the kingposts.

(28) *Eve mee a naono to kahi vaave taono riori bona atovo.*
They are also the beams on which the sago palm thatches will be fixed.

(29) *A bero nae mee na tei habana koana tea bebeahu na inu.*
Their number depends again only on the length of the house.

(30) *A naono nae a vahavahara naono vaa tea apao.*
The trees used for them are little trees from the old garden.

(31) *A varuvaru he toro tapaku tea buaku a papana tea papa matau ae papa keruka,*
(32) *ore paa vatasu vatatana tobina toon no paee vai*
The rafters must be made on the two sides, on the right side and the left side, so that they touch each other in the middle (of the roof) on top of the main ridgepole

(33) *to paa vaatoka vori toon na maa gaasuu vaa tobina.*
that they have placed on the kingposts in the middle.

(34) ***Vaatetekoio***
Upper ridgepole

(35) *O naono bebeahu to kahi vaatoka vaha maa riori toon na maa varuvaru vai to paa vatasu vatatana vuru.*
A long beam that will be placed on top of the rafters that touch each other (on the lower ridgepole).

(36) *Eve to kahi ato vakikis habana nana tea inu.*
It will also hold the house firmly together.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(37) *Evehee a kiu teo naono bona rakaha, ei meno kovuaka.*
But the main function of this beam, this is for the top thatch sheet.

(38) *Eve to kahi vaobete maa riori bono kovuaka ore paa obete vamataa koa maa teebona.*
It is the beam where they put the top thatch sheet so that it properly lies there.

(39) ***Hogo***
Floor joist

(40) *O naono to hogo vaha ni maa riori paana, be obete bata maana toon na maa paee vai tea maa toon.*
The beams that they put underneath (the floor), while they lie on the horizontal beams (that lie) on the posts.

(41) *Eve to kahi obete mau o paranda.*
They are (the ones) on which the floor will lie.

(42) *O tovihi? Na tei pete koana tea bebeahu ae tea tatabonata na inu.*
How many? That also just depends on the length and the width of the house.

Figure 2: *A sinoo na inu* - The frame of a house

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 17

A kiu vaa teo atovo – The work on the sago palm thatch

Enoch Horai Magum

(a) (b)

Figure 1: (a) *O Atovo* - The Sago palm, (b) *Paka atovo* - Sago palm leaves

(1) *O atovo eve o meho taba to paku-paku inu ni raara en Teapu.*
The sago palm thatch is a thing that we use to build houses here in the Teop region.

Enoch Horai Magum. 2026. *A kiu vaa teo atovo* – the work on the sago palm thatch. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 143–149. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(2) *Eve to vavaakopo riori toon na inu tea varavihi kahi bona huan, a roava ae a iravata. A kiu vaa teo atovo he na paku vonaen:*
It is put on top of the house to protect it against the rain, the sun and the storm. The work on the sago palm thatch is done as follows:

(3) *Beara suguna teo hum to tei nae a atovo, eara toro viana vamataa o vuaba vai o manoto vamataa, bara to vapepeana vamataa nana mee.*
When we have arrived at the place where the sago palms are, we must carefully choose one that is fully mature and also has many branches.

(4) *Beara viana vakavara, eara repaa tagava e ge eara repaa peha e.*
When we have chosen (it), we fell it or we climb it.

(5) *Tea peha, eara na peha rara, eara repaa mosi koa maa a peana gina beo atovo sun vakisi pahi nana.*
As for the climbing, we climb it, and then we only cut the branches on the top, while the sago palm is still standing.

(6) *Tea tagava, eara na tagava rara o atovo, ore obete nana putaa beara mosi rara a peana.*
As for the felling, we fell the sago palm so that it lies on the ground, while we are cutting off the branches.

(7) *Tea mosi peana he eara mee toro viana batara, are goe tea gono a peana vai to saka tara vamataa haana vai, a peana a tasitasiri ge to tara vakobusu nana.*
As for the cutting of branches, we must also be selective, so that we won't get the branches that do not look good, branches that are torn or that look young and moist.

(8) *Beara mosi vakavara a pea atovo, eara nao vai tea kiu vaa tea kosi; eara kou kosi vai a paka atovo kahi bona pea nae.*
When we have cut the sago palm branches, we now go on with the (next) work of cutting off the leaves; we now cut the sago-palm leaves off their branch.

(9) *Be kavara o hum bona, eara nao vai tea kiu vaa tea varovaromo nia paka atovo.*
When this part is finished, we go on with the work of stacking up the sago palm leaves.

(10) *Tea varovaromo he eara na varomo ni rara a ta taonim ge a ta peha totoka paka atovo.*
When stacking them up, we stack up five or six sago palm leaves.

(11) *Bea kiu vaa tea varovaromo kavara, eara kou paku vai a peha dee i. Eara repaa kisi e, kisi rara bona kukan a kisi, eara repaa dee voosu.*
When the work of stacking up is finished, we make one load. We tie it up by tying up three bundles, and then we carry it home.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(12) *A peha aba na antee nana tea kosi bono dorana o peana.*
A single person can cut off the leaves of four branches.

(13) *Ei beara suguna vaan, eara paku pete vai a meha kiu, a kiu vaa tea siri.*
Now, when we have arrived in the village, we do the next work, the work of tearing.

(a) (b)

Figure 2: (a) *Siri* - Tearing, (b) *Kaakaku, pisi* - Breaking, folding

(14) *Tea siri, eara na siri kahi batara a paka no atovo bona sikiri nae, ore tamee vamataa beara huha batara.*
As for the tearing, we tear the midrib off the sago palm leaf, so that it (the leaf) is flexible when we are sewing (the thatch sheets).

(15) *Beara siri vakavara, eara repaa nao pete tea kiu vaa tea varovaromo vahabana nie, eara repaa kaakaku e.*
When we have finished the tearing, we go on with the work of stacking them up again, and then we fold them.

(16) *Evehee eara toro kaku murina batara to peho ipinoo.*
But we must fold them according to one measure.

(17) *Bea kaakaku kavara, eara repaa vaobete vatataunun e, eara repaa kisi vahabana nie.*
When the folding is finished, we put them together, one on top of the other, then we tie them up again.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(a) (b)

Figure 3: (a) *Vaobete vatataunun* - Putting together, (b) *Amaa kisi atovo* - Bundles of sago palm leaves

(18) *Eara repaa vaobete vamataa e teo hum to raka vamataa nana.*
We carefully lay them in a place that is completely dry.

(19) *Pasi obete nom teebona, beara ihuana rara o bon vaa tea huha.*
They will lie there, while we are waiting for the sewing day.

(20) *Eara na antee rara tea pahin huha bata ei bea tataraha matatopo nana ge ei bea naba kiu bero rori.*
We can now directly sew (the thatch), when the *kururu* bamboo strip (on which the leaves are sewn)[1] is prepared, or when the group of workers is big.

(a) (b) (c)

Figure 4: (a) *Kururu* bamboo, (b) and (c) *Huha atovo* - Sewing a sago palm thatch sheet

[1]See *tataraha*[2] in the MTED https://dictionaria.clld.org/units/teop-tataraha_2

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(21) *Evehee a bero amaa vuri toro obete roho.*
But many days the (bundles) must lie (there) before (we can start).

(22) *Tea kiu vaa tea huha he na paku vonaen:*
The work of sewing, however, is done as follows:

(23) *Eara na vaobete rara a tataraha toon no kasuana, eara repaa parata o paka atovo, ei kou na kaku pisi momohu ara.*
We put the bamboo strip on the ground, then we open a sago-palm leaf, because we had folded it before.

(24) *Erau eara repaa vaobete maa a tataraha komano paka atovo.*
Then we lay the *kururu* bamboo strip inside the (folded) sago palm leaf.

(25) *Eara repaa vaakopo taono vahae bona.*
Then we cover it up again.

(26) *Eara repaa huu nio koopu toon na ta atovo.*
Then we stick the *koopu* bamboo (needle) from above into the upper part of the (folded) sago-palm thatch sheet.

(27) *Eara repaa tahi bono sikiri vai to siri kahi ara bono atovo teo vuri siri atovo.*
Then we insert the midrib that we have torn off the sago palm leaf when doing the sago palm leaf tearing.

(28) *Eara na tahi hopo rara, eara repaa tahi tavusu maa,*
We push it into (the hole of the folded leaf), and then we push it out.

(29) *Eara repaa vaobete vahabana nao o meho paka, eara repaa huha bata naora.*
Then we lay another leaf on top and go on sewing.

(30) *Eara pasi paku bata koa vo naora teebona, ore tavusu komana to haha nae a ta tataraha.*
We will do it continuously just like this, until the strip is used up.

(31) *Teo nin na vaapeha koana.*
With a *nin* reed, it is just the same.[2]

(32) *Evehee ahiki kou to koopu, eara na tahi bata koa ni naora o nin,*
If there is no *koopu* bamboo, we insert a *nin* reed.

(33) *ei kou o tamee, bara eara na vavakakaniva rara o hum tahi.*
because it is flexible, and we carve a sharp pointed end that we push into the leaf.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(34) *Be kavara a kiu vaa tea huha, eara repaa paku pete a kiu vaa tea vaave.*
When the sewing is finished, we do the next work of putting up the thatch.

(a) (b) (c)

Figure 5: (a) *A ta atovo* - Sago palm thatch sheet, (b) *Vaave* - Thatching, (c) *A atovo* - The thatch

(35) *Tea vaave, eara na paku roho rara a poka, o hum to sun bata raara beara vaave batara.*
Before putting up the thatch, we make a scaffold, a place on which we stand, when we are putting up the thatch.

(36) *Me tea vaave, eara na antee rara tea vaave hiava ge vaave gunaha.*
And when thatching, we can thatch upwards (starting from the bottom) or thatch downwards (starting from the ridgepole).

(37) *A buaku a aba pasi paku bata nom bona kiu vaa tea hee hiava ni bona atovo, bea meha papana vaave batari.*
Two people would do the work of reaching up the thatch sheets, while others would fix them.

(38) *Eara na kisi ni rara o kara sareai, o nin ge o obai, teo varuvaru.*
We tie (a thatch sheet) onto the rafter with a string made of the *sareai* vine,[3] the *nin* reed, or the calamus cane.[4]

(39) *Bea ta atovo obete maa tea varuvaru, eara repaa kisi taviri ie bona varuvaru.*
When the thatch sheet lies on the rafters, we tie it (the string) around the rafters.

[2]See *nin*[2] in the MTED https://dictionaria.clld.org/units/teop-nin_2

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(40) *Be kavara, eara repaa dee hiava vahabana a ta meha, ore suguna komana to antee nae a varuvaru.*
When it is finished, we reach up another (thatch sheet), until the end of the rafters is reached.

(41) *Tea vaave hiava, eara na vaobete taono bata naora a ta atovo bona ta meha, ore no suguna komana teo vatetekoio.*
When the thatching moves upwards, we put one sheet of sago palm thatch on top of the other, until the ridgepole is reached.

(42) *Bea vaave gunaha, eara na taneo maara teo vatetekoio, ore gunaha maa beara hogo bata ni naora a ta atovo paana ta meha.*
When the thatching moves downwards, we start at the ridgepole, and then it goes down, when we shove one sago palm thatch sheet underneath the other.

(43) *Bea peha papa inu kavara, eara repaa taneo a meha papa inu.*
When one side of the house is finished, we start with the other side.

(44) *Be kavara, ei kavara vai, eara repaa vaobete maa o kovuaka tea mahan vai to paa vatatana nom a vaave, ei teo vatetekoio.*
When (this other side) is finished - this (thatching) is finished now, and we put the top thatch sheet over the open space where the (two sides of the) thatch meet, this is on the upper ridge pole.

[3]We could not identify its English or scientific name of *sareai*; but see Chapter 11, Figure 1c
[4]See (Chapter 11: 44ff).

Chapter 18

O kovuaka – The top thatch sheet

Enoch Horai Magum

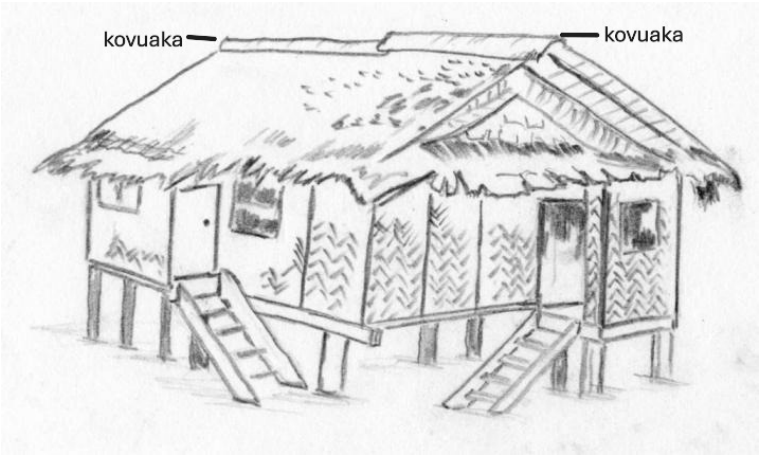

Figure 1: *Kovuaka* - Top thatch sheet

(1)	*O kovuaka eve to vatotomo nana bona a bua vaave vaa tea bua papa na inu.*	The top thatch sheet joins the two roofings on the two sides of the house together.
(2)	*A kiu nae he na paku vonaen:*	The work on it is done as follows:

Enoch Horai Magum. 2026. *O kovuaka* – the top thatch sheet. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 151–152. Berlin: Language Science Press.
DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(3)	*Eara huha rara a ta buaku a ta atovo, eara repaa vaakopo e toon no vatetekoio bono obai ge sareai.*	We sew two thatch sheets together, then we fix them as a cover on top of the upper ridgepole with (strings made of) the calamus cane or the *sareai* vine.
(4)	*A bua ta atovo vaarii he toro bebeahu vaantee bona inu ge o vaatetekoio.*	These two thatch sheets must be as long as the house or the upper ridgepole.
(5)	*Eara repaa kisi taono e bono vaatetekoio, na kisi rara bono kara obai ge sareai.*	Then we tie them together on top of the upper ridgepole, using strings made of the calamus cane or the *sareai* vine.
(6)	*Eara repaa mosi pete to pakoo.*	Then we cut an Albert Palm.[1]
(7)	*Eara repaa mosi kurusu vaantee a bebeahu na inu ge o vatetekoio.*	We cut it exactly according to the length of the house or the upper ridgepole.
(8)	*Erau eara repaa kopaa e, eara repaa kasi a komanae.*	Then we cut it lengthwise into halves and dig out its inside.
(9)	*Beara kasi vakavara e, eara repaa vaakopo taono mae bona bua ta atovo vai to paa vaobete vaevuru ara.*	When we have dug it out, we put the halves of the palm stem as a cover on top of the two thatch sheets that we have already laid there.
(10)	*Ei kokopo taono vai maa bona bua ta atovo,*	Now it covers the two thatch sheets,
(11)	*eara repaa kisi taono bana koa e bono vaatetekoio bono kara obai.*	and we tie it to the ridgepole with the calamus cane string.
(12)	*Evei a sii kiu vaa teo kovuaka.*	This is the little work of the top thatch sheet.

Chapter 19

A takinima – The plaited bamboo wall

Enoch Horai Magum

Figure 1: *A inu gorogorohu* - A sleeping house

(1)	*A takinima eve a peha taba to tab-otaboo vai niara nomanai en Teapu.*	Plaited bamboo is a thing that we use today for making walls here in the Teop region.
(2)	*Eve he na paku raara bona koopu.*	We make it from *koopu* bamboos.
(3)	*A kiu nae he na paku vonaen:*	The work on it is done as follows:

Enoch Horai Magum. 2026. *A takinima* – the plaited bamboo wall. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 153–158. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(4)	*Eara na tagihu rara rasuu*	We go into the jungle
(5)	*ei kou a koopu sa teitei vira bata haana kasuana.*	because there are not many *koopu* bamboos along the coast.
(6)	*A koopu vai a mataa ae bebeahu na teitei nana rasuu.*	The good and long *koopu* bamboos grow in the jungle.
(7)	*Beara tagihu ei to sun nae a koopu,*	When we go into the jungle where the *koopu* bamboos stand,
(8)	*eara toro siisira rakaha roho a koopu, eara repaa mosi mana.*	we must intensively examine the *koopu* bamboos, before we eventually cut them.
(9)	*O koopu toro mosi ara toro manoto bara toro mahaka rakaha mee.*	The *koopu* bamboo that we should cut must be mature and also must be very dry.
(10)	*Eara sa antee haara tea mosi o koopu vai o kobus,*	We cannot cut the moist *koopu* bamboo,
(11)	*tabae na antee nana tea koava ge mahamahan,*	because it can rot or leave spaces,
(12)	*beara takinima nie,*	when we plait the bamboo wall with it,
(13)	*ei be raka bata maa a koopu.*	that is when the *koopu* bamboos dry up.
(14)	*Beara sisira vakavara, eara repaa mosi.*	When we have finished examining (them), we cut (them).

(a) (b) (c)

Figure 2: (a) *A dee koopu* - A load of bamboos, (b) *Kopakopaa koopu* - Cut bamboos lengthwise, (c) *O komano koopu* - The inside of the (shaved) bamboos

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(15) *Are mosi vaantee a inu, eara repaa paku amaa dee.*
Then we cut as many as are needed for the house, and then we make loads (to carry the *koopu* bamboos home).

(16) *A peha dee kou na antee batana bono peho saavun koopu.*
One load consists of ten *koopu* bamboos.

(17) *Kavara vai, eara dee voosu vo vaan.*
After that we carry (them) home to the village.

(18) *Ei vaan to kahi paku pete raara o hum vaa tea kopakopaa a koopu.*
It is here in the village where we do the next part (of work), the lengthwise cutting of the *koopu* bamboos.

(19) *Beara kopakopaa vakavara, eara repaa paku pete o hum vaa tea tasu.*
When we have cut (them) lengthwise, we do the next part of work, the beating (the bamboo strips).

(20) *A tasu ei; beara tasu sirisiri bata rara a koopu, ore tamee teo vuri beara takitakinima batara.*
This beating (means) that we beat and split the *koopu* bamboo strips, so that they are flexible when we are plaiting the bamboo wall.

(21) *Tea tasu he eara na tasu rara a koopu bona toraara.*
As for the beating, we beat the *koopu* bamboo strips with an axe.

(22) *Be kavara a kiu vaa tea tasu, eara repaa taatagi o komano koopu -*
When the work of the beating is finished, we prepare the inside of the *koopu* bamboo strips -

(23) *ei eara na taraha vatotobin bata koara amaa nava nae.*
this means, we shave its bars and make the surface even.

(24) *Ei to mene ato vakisi bata ni nana bono koopu teo vuri vaa tea takitakinima.*
This is to prevent the bamboo from getting stuck (at the knots) when the plaiting is done.

(25) *Beara taatagi vakavara a koopu, eara nao vai tea kiu vaa tea takitakinima.*
When we have prepared the *koopu* bamboo strips, we proceed with the work of the bamboo-plaiting.

(26) *Tea takitakinima he na tei me nana bono buaku o kaku hanana vaa tea paku takinima.*
As for the bamboo-plaiting, there are two kinds of patterns of making plaited bamboo walls.

(27) *O peho o vavaasun, o meho he o vavaagoroho.*
One is the make-stand-up pattern, the other one the make-asleep pattern.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(a) (b)

Figure 3: (a) *O vavaasun* - The make-stand-up pattern,
(b) *O vavaagoroho* - The make-asleep pattern

(a) (b)

Figure 4: (a) *O vavaasun* - The make-stand-up pattern,
(b) *O vavaagoroho* - The make-asleep pattern

(28) *Teo vavaasun, eara na ipinoo rara a sun hiava bara a tatabonata na inu.*

As for the make-stand-up pattern, we measure the height and the width of the house.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(29) *Eara repaa kurukurus a koopu vai to paa tasu vaevuru ara.*
Then we cut the *koopu* bamboo stripes that we have already beaten (according to the measures).

(30) *Be kavara o hum bona, eara repaa vavaasun nao a koopu, ore no suguna komana teo vagegeana na taboo.*
When this part is finished, we make the *koopu* bamboo strips stand up, until the ends of the wall are reached.

(31) *Eara repaa taneo tea hogohogo ni nao a koopu vaantee tea tatabonata na taboo.*
Then we start pushing the (horizontal) *koopu* bamboo strips (in between the vertical ones), until it is enough for the width of the wall.

(32) *Beara hogo, eara na gae rara a ta kukan, eara repaa hogo tavusu nie.*
When we push them, we lift three (vertical) strips, then we push them (the (horizontal ones) through.

(33) *Eara repaa taono a ta meha ta kukan, eara repaa gae vaha bana a ta kukan.*
Then we put three other strips on top, and then we lift three strips again.

(34) *Eara paku bata koa vo nao raen ore poosu komana a taboo.*
We just do it like this until the wall is completely closed.

(35) *Teo vavaagoroho he na vaapeha koana, amaa hogo ae a gae kukan.*
With the make-asleep pattern it is just the same, some pushing and the lifting of three (strips).

(36) *Evehee ei kou eara sa paku haara to ipinoo.*
But now we do not do any measurement.

(37) *Eara na vaagoroho rara a ta kukan ge a ta taonim,*
We lay three or five strips down,

(38) *eara repaa taneo kou tea hogo ae gae, ore suguna komana bea taboo poosu vakavara.*
then we start pushing and lifting (the strips) until the wall is completely closed.

(39) *Ahiki to ipinoo, eikou eara na ponuu kaakoo bata koara a koopu beara hogo vaantee bata naora a taboo.*
There is not any measure, because we just bend and move the bamboo strips along, when we are pushing (them) to the (end of the) wall.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 5: *A inu gorogoroho* - A sleeping house

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 20

O paranda – The floor

Enoch Horai Magum

(a) (b)

Figure 1: (a) *Kobuu* - Kobuu palm (*Cyrtostachys Ioriae*),
(b) *Paranda* - Floor

(1) *O paranda o peho taba vaa tea inu teara a ta Teapu.*
The floor is a thing in our house, of us, the Teop people.

(2) *Eove to kom, hio ae goroho raara.*
It is where we step, sit, and sleep on.

Enoch Horai Magum. 2026. *O paranda* – the floor. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 159–162. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(3)	*O paranda na vavaobete raara toon na naono vai to dao raara bono hogo.*	We put the floor onto the beams that we call *hogo* (floor joists).
(4)	*O paranda na pakupaku raara bono kobuu.*	We make the floor from the *kobuu* palm (Cyrtostachys sp).
(5)	*Tea meha maa vaan na pakupaku riori bono kumako.*	In other villages they make it from the kugumaru palm (*Areca novohibernica*).
(6)	*Beara tau paku o paranda, eara toro ipinoo roho a bebeahu ae a tatabonata na inu bono kara urisi.*	When we are about to make the floor, we must measure the length and the width of the house with a tape made of the wild banana sheath.[1]
(7)	*O kara urisi bona to kahi dee raara rasuu to kahi ipinoo raara o kobuu.*	This wild banana sheath tape we take to the jungle where we will measure the *kobuu* palm.
(8)	*Beara suguna teo hum to tei nae o kobuu, eara paa sisira roho tea tabae o kobuu toro paku ara bono paranda toro vuaba vai o manoto.*	When we have arrived at the place where the *kobuu* palm stands, we carefully examine it, because the *kobuu* palm from which we will make the floor must be a mature one.
(9)	*Beara viana vakavara o kobuu vai tau paku ara o paranda, eara repaa mosi gunaha e.*	When we have chosen the *kobuu* palm that we are about to make the floor from, we cut it down.
(10)	*O kobuu vai o kobusu saka mataa haana,*	The young and moist *kobuu* palm is not good,
(11)	*eikou na antee vaha koana tea koava, evehee o vuaba vai o manoto vamataa na antee nana tea tei vananaoana.*	because it can easily rot, but the fully mature can last for a long time.
(12)	*Beo kobuu obete nana putaa, eara repaa ipinoo e,*	When the *kobuu* palm is lying on the ground, we measure it,
(13)	*eara repaa rom suku bata koara o ipinoo.*	and then we just cut the stem crosswise according to the measure.
(14)	*Beara romrom vakavara e, eara repaa paku pete a kiu vaa tea kopaa.*	When we have finished cutting it up crosswise, we subsequently do the work of cutting it lengthwise.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(15) *Eara he toro kopaa e teo hum buaku.*
But we must cut it lengthwise into two pieces.

(16) *Tea kiu vaa tea kopaa, eara toro kiu nia buaku a toraaraa, ae amaa ta ginuva.*
For the work of the lengthwise cutting, we must work with two axes and some wedges.

(17) *Tea kopaa, eara toro mosi momohu nia peha toraaraa,*
For the lengthwise cut, we must first make a cut with one axe,

(18) *ore topo vakisi nana, beara mosi nia vaabuaku.*
so that it is still stuck (in the stem) when we make a cut with the second (axe).

(19) *A vaabuaku re topo vakisi nana, beara rahi pute a toraaraa momohu,*
Then the second (axe) is still stuck (in the stem), when we pull out the first axe,

(20) *beara tapa bata ni naora amaa ta ginuva teo hum to mosi vaakaa bata naona a bua toraaraa.*
while we are driving the wedges into the stem where the two axes cut it lengthwise open.

(21) *Eara pasi paku bata koa vo naora teebona, ore antee komana beo rom kobuu takopaa.*
We will do it like this until the stem of the *kobuu* palm is cut open lengthwise.

(22) *Be kavara o hum kiu bona, eara repaa paku pete o hum vaa tea kopaa varutarutaa e.*
When this part of work is finished, we continue with the part of cutting it bit by bit lengthwise (into two halves).

(23) *A kiu bona sa beera vaha haana,*
This work is not big again,

(24) *na antee koana bona peha toraaraa.*
it only needs one axe.

(25) *Beara kopaa varutarutaa bata rae, eara mee toro ipinoo batara a tatabonata bona bebeahu na kobisi kuriraara.*
While we are cutting it open lengthwise bit by bit, we must also measure the width with the length of our finger.

(26) *Be kavara a kiu bona, eara repaa tarataraha kahie bono ogana nae*
When this work is finished, we carve its soft inside out

(27) *ae taraha taatagi koa amaa ta kobuu, ore paa kavara kou a kiu vaa teebona.*
and just carefully carve off some pieces of *kobuu* palm, and then indeed the work on it is finished.

(28) *A kiu vaa tea paku paranda a hihivaa,*
The work of making the floor is difficult,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(29) *eikou o kobuu o taba kikis, ei me vaaponis rakaha nana bona kiu bona.*
because the *kobuu* palm is a hard thing, and this also makes this work very heavy.

(30) *Ei, eara deedee voosu vai, are paa no vaobete e tea inu ore paa tavus paranda.*
Now, we carry it home, then we make it lie in the house, so that it becomes a floor.[2]

[1]See (Chapter 11: 88ff).
[2]The floor is also made of sago-palm stems, see (Chapter 6:28).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Part IV

Dugout canoes with outriggers

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 21

Introduction

Ulrike Mosel

Figure 1: *Hua gunaha* – Paddling ashore

Apart from one modern kind of metal boat, I only observed dug-out canoes with outriggers in the Teop area during my fieldwork trips between 2000 and 2014. There are two kinds of dug-out outrigger canoes: the indigenous outrigger canoe called *sinivi suuna* and the *potee*, a new type of outrigger canoe that is said to originate from the Solomon Islands. Both kinds of canoe are dugouts built from a single log, but differ in the width of the hull and the construction of the outrigger.

Ulrike Mosel. 2026. Introduction. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 165–168. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 2: *Sinivi suuna* - Indigenous canoe

Figure 3: *Potee* - A new type of canoe

The first text by Mark Tahi and Enoch Horai Magum describes the hull of the *sinivi suuna* and is followed by Ruth Sima Rigamu's description of the outrigger float, which is an excerpt from her texts about trees. The tree in question is called *kopihoo*. As we could not identify its scientific or its English name, we included two photographs of this tree. In third chapter Paul Morekevan and Enoch Horai Magum describe the hull and the outrigger of the *potee* canoe. The word *sinivi* is a generic term for both types of canoe, and the name for the Blackboard Tree, see Chapter 7, which is used for building the hull of these canoes.

The construction of the Teop *sinivi suuna* is similar to the outrigger dug-out canoes on Petats, an island off the west coast of Buka, and in Kurtatchi, a village on the north coast of Bougainville that have been described by Blackwood (1935: 360-381). Her list of "terms used in connection with dug-out canoe" shows several terms of the Kurtachi language that are closely related to the corresponding Teop terms, see Table 1 and Blackwood (1935: 367). According to the people Blackwood (1935: 360) and Shoffner (1976: 186) worked with, the outrigger dugout canoe was

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Table 1: Similar Kurtatchi and Teop terms related to the dugout outrigger canoe

MEANING OF TERM	KURTATCHI	TEOP
Dug-out canoe with outrigger	*tʃinív*	*sinivi*
Tree of which it is generally made	*tʃinív*	*sinivi*
Outrigger booms and pole forming platform	*wanér*	*vanai*
Outrigger float	*ag* or *waga*	*aga*

introduced to North-Bougainville before European contact. In contrast to other people of Bougainville, the Teop people did not build plank canoes (Blackwood 1935: 370, Shoffner 1976: 186).

The *potee* canoe, see Figure 3, is not regarded as a *sinivi suuna* 'indigenous canoe', but said to be a type of canoe from the Solomon Islands to which the Teop people attached an outrigger with two booms, see (Chapter 24: 47ff.). The terms used for the parts of the *potee* and the process of its building are the same as for the *sinivi suuna*. When I stayed at Hiovabon for my last fieldwork in 2014, the most people used the *sinivi suuna*.

Figure 4: Teop Harbour in 2013

The two texts about the *sinivi suuna* and the *potee* do not mention which kinds of wood are used to make the hull and the outriggers, but Joyce Maion describes in Chapter 7 the *sinivi* 'Blackboard Tree' (*Alstonia scholaris*) and mentions two

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

further trees: the *maramakasi* which we did not identify and the *bio* a kind of Ficus tree. Other trees for canoe building are:

- *Marakaoto* 'tree species' (*Terminalia species*) https://dictionaria.clld.org/units/teop-marakaoto
- *Tako* 'Alexandrian Laurel' (*Callophyllum mophyllum*): https://dictionaria.clld.org/units/teop-tako_1
- *Voata* 'tree species' (*Euodia elleryana*) https://dictionaria.clld.org/units/teop-voata

Chapter 22

O sinivi suuna – The indigenous canoe

Mark Tahi & Enoch Horai Magum

Figure 1: *Sinivi suuna* - Indigenous canoe

Mark Tahi & Enoch Horai Magum. 2026. *O sinivi suuna* – the indigenous canoe. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 169–173. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(1)	*O sinivi suuna*	The indigenous canoe
(2)	*O matapaku no sinivi suuna na kao vonaen:*	The method of making an indigenous canoe is as follows:
(3)	*Eara na hopo rara rasuu to tei nana o naono,*	We go into the jungle where the tree is,
(4)	*eara repaa sisira o naono havee toro busu voe beara tagava e.*	then we examine where the tree should fall down when we fell it.
(5)	*Eara repaa hanakahi vamataa nie.*	We clean the undergrowth well for it.
(6)	*Be kuu gunaha, eara repaa ipinoo e, ei teo manin tea otei vai to pasi paku nana bono sinivi.*	When (the tree) has fallen down, we measure it according to the wish of the man who will make the canoe.
(7)	*O ipinoo he na paku raara bona bebeahu na kuriraara, evehe ei kou ei, eara toro siisira vamataa o naono,*	The measurement we take with the length of our arm, while at the same time we must thoroughly examine the tree,
(8)	*eara mene mosi vahoara o hum vai o vageegeno ge to tanove nana.*	so that we won't accidentally cut a crooked part or (a part) that is bulky.
(9)	*Be kavara o hum kiu bona, eara repaa vaobete vamataa e.*	When this part of work is finished, we lay it down properly.

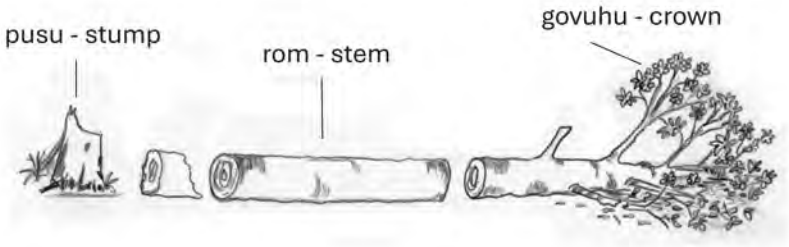

Figure 2: *O naono tagava* - The felled tree

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

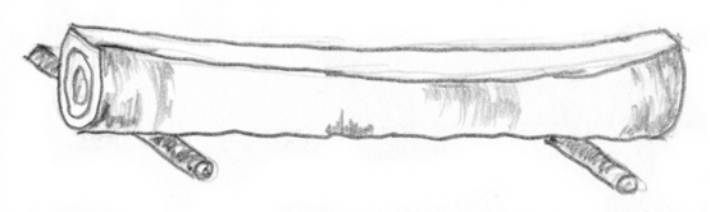

Figure 3: *Poana* - Slice the upper part off

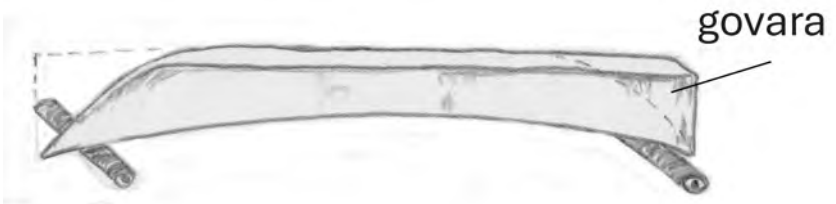

Figure 4: *Paku a bua govara* - Make the two pointed ends

(10)	*Murinae eara repaa poana mae,*	After that we slice its upper part off,
(11)	*eara repaa paku pete a kiu vaa tea papaesi.*	then we do the next work of cutting the sides into shape.
(12)	*Beara papaes vakavara, eara repaa vahio vamataa vahabana e,*	When we have finished cutting the sides, we place it properly again,
(13)	*eara repaa taneo tea kepo.*	then we start carving.
(14)	*Kepo, are kepo, beara kepo ae mosi gunagunaha vaantee bata maara o ipinoo ge o manin tea too vaahito no sinivi.*	Carve, then we carve, while we are carving and cutting downwards according to the measurement or the wish of the owner of the canoe.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(15)	*Murina maa taba vaarii eara repaa vaakopo e.*	After these things, we turn it upside down.
(16)	*Eara repaa paku mana maa a bua govara vaa matana ae vaa itao.*	Then we eventually make the two pointed ends at the bow and at the stern.
(17)	*Beara paku vakavara a bua govara, o sinivi kou tavusu vai ei.*	When we have done the two pointed ends, the canoe is taking shape now.
(18)	*Be kavara, eara repaa paku pete a mosi na taeno sinivi, o hum to kahi hiohio ni nae o sinivi.*	When (this is) finished, we do the cutting of the bottom of the canoe (from the outside), the part on which the canoe will sit.
(19)	*Murina mosi bona, eara repaa paku pete a meha papaesi.*	After this cut, we do another cut along the sides of the canoe.
(20)	*A papaesi bona to kahi sue bata ka nom araara havee toro mosi kaakoo ara.*	This cut along the sides will tell us where we must cut.
(21)	*Teo vuri beara mosi suusuku bata maara amaa papaes vai, eara mee na taatagi bata maara a bua govara, vaa matana ae teo itao.*	When we do the next cuts along these cuts on the sides, we are also getting the two pointed ends at the bow and the stern into shape.
(22)	*Be kavara, eara repaa verete vahaa o sinivi are paa taneo tea koro a komano sinivi.*	When this is finished, we turn the canoe over again and then start cutting out the inside of the canoe.
(23)	*A maamihu kiu vai na paku vaagum ni raara.*	All these various kinds of work we do in a group.
(24)	*Beara koro vaantee a rahi voosu, o vaagum vai repaa pahin rahi voosu bari.*	When we have cut out enough for pulling (the canoe) home, this group will immediately pull it home.
(25)	*Beo sinivi suguna vaan, a too vaahito kou paku komana vai bona maa vagegeana kiu vai,*	When the canoe arrives in the village, the owner does the last pieces of work himself,
(26)	*a vaamono ae koro vagegeana bona komano sinivi.*	cutting more wood out and doing the last bits of cutting out the inside of the canoe.
(27)	*Tea taatagi bona suin no sinivi toro pakue bona vanaa.*	To get the body of the canoe ready he must do it with the plane

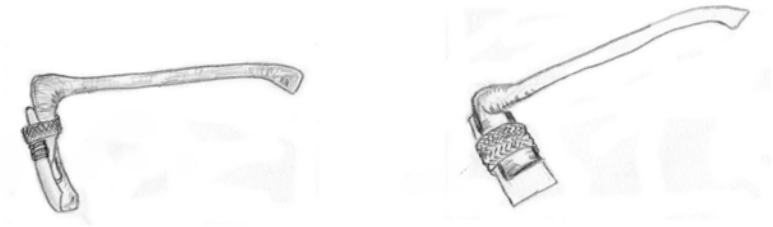

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(28) *ae toro taatagi bona komano sinivi bona koro.*

and must get the inside of the canoe into shape with the gouging tool.

(29) *Be kavara, ore paa vaobete vaavaha bono sinivi kahi bona roava ae a huan be ihuana koana bono bon pam.*

When this is finished, he puts the canoe away from the sun and the rain, while waiting for the day of lashing (the outrigger to the canoe).

Chapter 24

O sinivi potee – The imported canoe called *potee*

Paul Morekevan & Enoch Horai Magum

Figure 1: *O potee* - The imported canoe

(1)	*O sinivi potee*	The *potee* canoe
(2)	*O potee o meho kaku sinivi to tei nana Teapu.*	The *potee* is another type of canoe in the Teop area.
(3)	*Enaa kahi vahutate nom, havee to pakupaku vaavaha me raara e.*	I am going to tell you how we make it.
(4)	*Beara rake tea paku o potee, eara toro tagihu roho rasuu tea tara rakerake to naono vai to mataa nana tea paku bono potee.*	When we want to make a *potee*, we must first go into the jungle to look for a tree that is good for making the *potee*.

Paul Morekevan & Enoch Horai Magum. 2026. *O sinivi potee* – the imported canoe called *potee*. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 177–182. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(5)	*A kiu no potee sa beera potee haana bona kiu vaa teo sinivi suuna,*	The work of carving the *potee* is not as big as the work on the indigenous canoe,
(6)	*ei mea peha aba na antee nana tea paku bona.*	that is, a single person can do it.
(7)	*Me bea peha aba rova koa vurahe to naono, eove repaa tagava gunaha bona.*	And even when just a single person finds a (suitable) tree, he fells it.[1]
(8)	*Be tagava bona, eove repaa rom kurus bono govuhu no naono, be tara voen na mataa nana.*	When he has felled it, he cuts the crown of the tree off, if he sees that (the log) is good.
(9)	*Beve rom kurusu vakavara bona, eove repaa poana pete bona.*	When he has cut it off, he slices the upper side off the log.
(10)	*A kiu vaa teo potee a varuruva koa tabae o koma beera.*	The work on the potee canoe is easy, because it has a big inside.
(11)	*Be poana vakavara bona, eove repaa koro bona bona toraaraa ae a rom.*	When having sliced off its upper part, he carves the inside with an axe and a hoe.
(12)	*A kiu vaa tea koro koma sinivi a beera,*	The work of carving the inside of the indigenous canoe is big,
(13)	*me be nagunagu, eove repaa kaokahi bona ore paa vaavuriha.*	and when he gets exhausted, he leaves it to have a rest.
(14)	*A koro no komano sinivi potee na varuruva koana, sa potee haana bono komano sinivi suuna,*	The carving of the inside of the *potee* canoe is quite easy, it is not like the inside of the indigenous canoe,
(15)	*tabae na antee koa vonaen ei bean parata o buo kubisi, o kubis beera ae o kubis bebeahu.*	because (the indigenous canoe) is only as wide as the span between your thumb and your middle finger.[2]
(16)	*Bean boha voen paa anteu, ean repaa nao vo teo hum vaa tea pisipisi.*	When you think that it is enough, then you go on with the part of carving the pointed ends.
(17)	*Bean taraha pisi vakavara a peha papana, ean repaa nao pete vo tea meha papana.*	When you have finished planing one side of the pointed end, then you go on with the other side.

[1] Compare (Chapter 7: 5ff.)

[2] Lit. "... because only reaches like this: this (is) when you open the two fingers, the big finger and the long finger."

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(18)	*Be kavara, ean repaa koro vahabana o komano sinivi.*	After that, you carve again the inside of the canoe.
(19)	*Koro, koro, bean boha voen, "antee vai," ean repaa nao pete teo hum vaa tea govagovara o sinivi.*	Carve, carve, (and) when you think, "Enough now," you go on with the part of carving the bow and the stern of the canoe.
(20)	*Bean mei nom tea govara o sinivi, ean toro verete roho ei.*	Before you carve the bow and the stern of the canoe, you must turn it over.
(21)	*A kiu bona a beera,*	This work is big,
(22)	*meo aba o sii bero vareko toro paku bari.*	and more than one person must do it.
(23)	*Beam verete vakavara e, ean repaa taneo a kiu vaa tea govagovara.*	When you have turned it over, you start the work of carving the bow and the stern.
(24)	*Govara kaakoo teo ihu no sinivi,*	Carve by moving towards the nose of the canoe,
(25)	*ean repaa vaatotobin e,*	you make it straight,
(26)	*ean repaa govara pete o hum vaa teo itao.*	then you continue carving the part at the stern.
(27)	*Bea govara bona kavara, ean paa vaatotobin e.*	When this carving of stern and bow is finished, you make it straight.
(28)	*Be kavara, ean repaa verete vahae.*	When it is finished, you turn it over again.
(29)	*O sinivi paa aeae vaevuru,*	The canoe is already light now,
(30)	*me ean koa a peha na antee nom tea verete vahae.*	and you can turn it over again just by yourself.
(31)	*Bean verete vakavara, ean repaa koro vahabana e.*	When you have turned it over, you do some more carving on the inside.
(32)	*Koro, koro, bean boha voen paa anteu, ean paa antee,*	Carve (and) carve, (and) when you think that it is enough, you stop,
(33)	*ei ihuana vai o hum vaa tea rahi voosu.*	now (you) wait for the part of pulling (the canoe) home.
(34)	*Teo bon rahi no potee, ean repaa sue ki to sii aba ore ausu vuan tea rahi voosu e.*	For the day of pulling the potee canoe, you tell some people to assist you to pull it home.
(35)	*A kiu vai ahiki ta von,*	This work does not cost anything,

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(36) *evehee ean toro paku a sii tabaan to kahi ma an koa vue o manae to paa nao nau tea rahi sinivi.*
but you should make some food that the young men will eat who have gone there to pull the canoe.

(37) *Beori rahi voosu maa bari, ean repaa vaan riori, a menaga, nahu iana bara ta maa meha tabaan bata mee.*
When they have pulled it home, you will give them to eat manioc dumplings, a pot of fish, and also some other food along with it.

(38) *Bea maa taba vai kavara, ean paa paku papahiana komana nom amaa sii vagegeana kiu.*
When these things are finished, you will do the final little pieces of work just by yourself.

(39) *Beo naono tei me nana bona maa panapanaa, ean repaa gono maa ta maa vua asita tea asita o sinivi tean.*
When the wood has knotholes, you get some putty nuts to seal your canoe with putty nut glue.

(a) (b) (c)

Figure 2: (a) *Asita* - Putty nut tree, (b) and (c) *Vua asita* - Putty nut

(40) *A meha maa naono na hiki ni nana bona panapanaa.*
Some trees do not have any knotholes.

(41) *Eikou ean repaa pahin paku bata koa amaa tapara.*
And so you straightaway make some *tapara* poles (that prevent the sides from moving inside).

(42) *O naono vai to tei me nana bona panapanaa toro vaatei roho beo asita raka roho nana.*
The wood that has knotholes must be left untouched until the glue has dried up.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(43) *Bean paku vakavara amaa tapara, ean repaa nao vo teo hum vaa tea pam no sinivi.*
When you have finished fixing the *tapara* poles, you move on to the part of tying up the canoe.

Figure 3: *Tapara* - Fixing poles inside the canoe

(44) *Teo potee, o buaku koa o vanai, o peho matana, o meho he itao.*
As for the *potee* canoe, there are only two outrigger booms, one near the bow, and the other near the stern.

(45) *Bean pam vakavara nio buo vanai, ean repaa tapa ae pam vagegeana koa nio aga ore paa kavara.*
When you have tied the two outrigger booms (to the hull of the canoe), you finally fix the float with pegs and lashings, and then it is finished.

(46) *Ei ean antee vai e tea hae tea vagana ge havee.*
Now you can board it to go fishing or whatever.

(47) *O kaku sinivi vai o sinivi vaa Solomon.*
This type of canoe is a canoe from the Solomon Islands.

(48) *Evehee a ta Solomon saka vaatei haari bono aga.*
But the Solomon people do not attach a float.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(49)	*Eve he nomaa voen meara paa vaatei o aga,*	When it came to us like this, we attached the float,
(50)	*ei kou a tahii teara na pohapoha sana nana.*	because our sea is very rough.
(51)	*O potee na antee nana tea tatana bona too hata.*	The *potee* can resist bad weather.
(52)	*Sa manin goo haana,*	It never sinks,
(53)	*o sinivi suuna he na antee nana tea goo.*	whereas the indigenous canoe can sink.

Figure 4: *Sima Rigamu na hua nana bono potee* - Sima Rigamu is paddling a *potee*

Chapter 25

Introduction

Ulrike Mosel

Figure 1: Teop Island and the reef

The lagoon of the Teop region includes Teop Island and is very rich of fish and other marine animals.[1] Consequently, there has not been the need to develop special fishing techniques for the deep ocean. Shoffner (1976: 185) remarks in his

[1]For example, search the Semantic Domain of the MTED for "animals, fishes" and the Part of Speech field for "N2" and find 131 entries. Or search the Semantic Domain for "animals, shellfish" and the Part of Speech field for "N3" and find 53 entries. These data were collected by the Teop team without any questionnaires.

Ulrike Mosel. 2026. Introduction. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 185–186. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

detailed chapter on Marine Resource Activities, "The Teop are not great maritime travellers, seldom venturing more than a quarter of a mile into deep water."

Since decades ago traditional hand-made fishing nets and lines have been replaced with *kave sitiring* 'nets made of plastic strings' and *kara sitiring* 'plastic strings', but intensive team work with elderly fishing experts enabled the authors Enoch Magum, Naphtali Maion, Mark Tahi, and the graphic artist Neville Vitahi to write and illustrate the following chapters on catching turtles with the huge *kave goroto* 'turtle net', see Chapters 26, 27, and 28, the construction of the bamboo-frame net called *kakavei*, see Chapter 29, two net-fishing techniques called *varigomo* and *seige*, see Chapters 30 and 31, and angling with a kite to which the fishing line with a bait is attached, see Chapter 34.[2]

Examples of fishing methods that have still been practiced during our fieldwork are *tanaa* 'group fishing', see Chapter 32, and *vavaiku* 'a kind of angling', see Chapter 33, and those kinds of catching fish and gathering sea food that are only done by women on the reef during low tide. These are catching wrasses by hand, see Chapter 35, fish poisoning, see Chapters 36, 37, and 38, and digging sea-sausages, see Chapter 39.

Further fishing methods like *rooroto*^{2} 'fish for tuna', *taragao* 'angling mackerels' and *vavaakopo*^{2} 'fishing with cole lamps', are described in the MTED.[3]

The data for the texts and descriptions for the MTED were collected by the Teop team without any questionnaires.

[2]Compare Blackwood's descriptions of the "net on frame" and the "fishing kite" (1935: 342-346, 348-350). Shoffner reports that already during his fieldwork 1973-1974 turtle nets and fishing kites were no longer in use in the Teop area (1976: 208, 201).

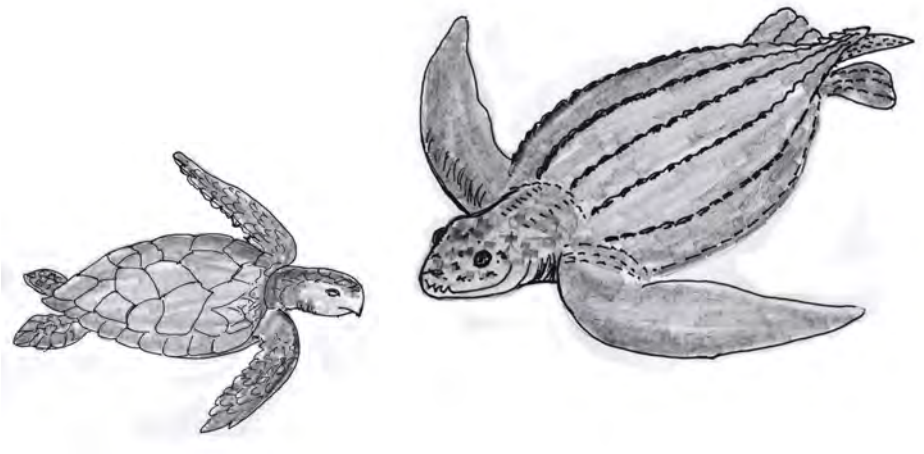

[3]If you search the Semantic Domain for "fishing", you find 110 entries that are related to fishing methods. Fishing tools are listed in the Semantic Domain "tools and weapons" with references to 125 entries.

Chapter 26

A goroto – The turtle

Naphtali Maion & Ondria Tavagaga

(a) (b)

Figure 1: (a) *Unava* - A small kind of turtle, (b) *Toorue* - The largest kind of Turtle

(1)	***Goroto***	**Turtle**
(2)	*A goroto a iana a beera sana.*	The turtle is a very big swimming animal.
(3)	*Bean tara e, ean repaa tara voen:*	When you see it, you see:

Naphtali Maion & Ondria Tavagaga. 2026. *A goroto* – the turtle. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 187–191. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(4)	*A goroto na tei me nana bono kahoo, o dorana o pakapaka,*	the turtle has a head and four flippers.
(5)	*O kapa vaa toonunae o kikis, o kapa vaa domonae saka kikis haana.*	The shell on its back is hard, the shell on its chest is not hard.
(6)	*Teo dorana o pakapaka, o buaku vaa kahoo nae na dao raara bono huahua.*	As for the four flippers, the two flippers near its head we call the paddles.
(7)	*A goroto na huahua vakikis ni nana bono buo pakapaka bona.*	The turtle strongly paddles with these two flippers.
(8)	*O buo pakapaka vaa murinae to vakarovo bata ni nae bara na hua ni nae mee.*	The two hind flippers it uses for steering and also for paddling.
(9)	*A goroto na vaavuriha nana mee be tavusu kahi bona tahii, ore paa ruuvu gunaha vahaa.*	The turtle also breathes when it comes out of the water, then it dives down again.
(10)	*A goroto vai a moon be tau vahuhu, ore paa gunaha vo teo kakaamuru.*	When the female turtle is about to lay eggs, it goes ashore to the white sand.
(11)	*Na kasi nana bona govee kasuana*	It digs a hole in the ground,
(12)	*ore paa vahuhu komana govee*	then it lays its eggs into the hole
(13)	*ore paa pae vahaa bona*	and fills the hole up again.
(14)	*Evehee bea goroto pae vahaa bona govee, na varovarova nae,*	But when the turtle fills up the hole again, it becomes invisable,
(15)	*a aba ore saka antee haa bona tea vurahe vakahu.*	so that a human being cannot quickly find it.
(16)	*A rupi a bero kurusu to vahuhu nana a goroto.*	The turtle lays many eggs indeed.
(17)	*Toro oha nana bono taonim saavun.*	It must be more than fifty.
(18)	*Bea peha aba naonao tea ruuvu goroto, na nao vatotobin vo nana irihi.*	When someone goes diving for turtles, he goes straight to the edge of the reef.
(19)	*O goroto na teitei rori irihi tea maa avaava vasu ei teo hum namana.*	The turtles stay at the edge of the reef in the caves of the rocks at the side of the ocean.
(20)	*Bea tahii masi, ore paa vurahe vakahu koa bono goroto*	When the sea is at low tide (so that the reef is visable), then he can quickly find the turtles.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(21) *beori ani rori bono vasukare bara tea maa avaava vasu ae tea maa vaagoroto.*
when they are eating the *vasukare* corals and are in the rock caves and in the turtle tunnels.

(22) ***Havee to gono kaakoo mi riori bona goroto***
How they catch a turtle

(23) *A goroto na ato riori tea kave,*
They get hold of the turtle with the net,

(24) *ei beori nao tea veo goroto.*
this means when they go turtle netting.

(25) *A kave bona a beera sana.*
This net is very big.

(26) *Na antee nana tea kana bono buaku saavun goroto.*
It can catch twenty turtles.

(27) *Amaa peha maa vuri to naonao riori tea ruuvu goroto.*
Sometimes they go diving for turtles.

(28) *A goroto mee na kapa riori bea goroto gunaha nao tea vahuhu kasuana.*
They also catch a turtle when the turtle goes ashore to lay its eggs in the sand.

(29) *Tea maa vuri sunuu, a goroto mee na vurahe riori ei be masi pina ni tea maa kopua.*
When they go fishing with torches, they also find the turtle when it gets trapped in the lagoons at low tide.

(30) ***Havee to kaku goroto vaavaha vo ria abana vaa Teapu***
How turtles are butchered by the Teop people

(31) *Nabunuu roho, a kaku goroto, amaa abana bebeera koa to pakupaku roho bari.*
In former times the butchering of turtles was only done by the big men.

(32) *Ean saka antee haa nom tea tara ta peha beiko ge ta peha visoasi teo hum vai to kaku goroto riori.*
You could not see any child or any young man at the place where they were butchering turtles.

(33) *A kiu tea abana bebeera koa, paku vonae tea kaku guu mee.*
It was exclusively the work of the chiefs, it was like butchering pigs.

(34) *Nomana amaa matapaku vai paa rova kahi avuaraara.*
Today these practices have disappeared from us.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(35) *Nomana bean tau kaku a goroto - paku koai; ahiki vira to moroko nae vahaa.*
Today, when you are about to butcher a turtle - just do it; indeed, there is not any talk about it.

(36) ***Amaa hanana vaa tea kaku goroto:***
The ways of butchering turtles:

(37) *Rahi gunaha a goroto teo hum to kahi kaku noman e.*
Pull the turtle ashore to the place where you are going to butcher it.

(38) *Garuhu vira nio kasuana.*
Thoroughly wash the sand off.

(39) *Navuhu vamate a goroto, navuhu kii gogoonae.*
Hit the turtle dead, hit it on its throat.

(40) *Pee o kapa vaa domonae, pee murina koa o vavaarihi.*
Cut the shell on its chest, subsequently cut the sides.

(41) *Ean repaa kapae.*
Then you take its shell off.

(42) *Rake nao o pusu no hiapa to taneo maana teo orooromo,*
Search for the upper end of the intestines that begin in its throat,

(43) *pee kurukurusui, rahi tavusu kahi bona komana goroto.*
cut them off, pull them out of the belly of the turtle.

(44) *Rahi tavusu vakavara o hiapa ae amaa meha taba vaa tea goroto,*
When you have completely pulled out the instestines and the other things in the turtle,

(45) *kana tavusu o revasin.*
scoop the blood out.

(46) *Peepee vihu amaa pakapaka nae (o dorana) bara o kahoo.*
Cut off its flippers (the four) and the head.

(47) *Vaanoto o suraa o beera mene rava bona mata goroto.*
Light a big fire for heating the pieces of the turtle.

(48) *Rava vakavara, vaatei a mata goroto teo bana.*
After having heated them up, put the turtle pieces on a mat.

(49) *Vaagunagunaha a mata goroto, ean repaa peepee vaantee a peepeha mono goroto.*
Cut the turtle pieces further up, then you cut enough for each turtle parcel.

(50) *(Monomono a goroto. Kavara vai voen, vaatei vai tea tao.*
Wrap the turtle up into parcels. When it's finished in this way, put (the parcels) into the earth oven.

(51) *Amaa hum vaa komana goroto na aniani ria ta Teapu.*
The parts inside the turtle are eaten by the Teop people

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(52)	*O hiapa na peepee vakakato riori*	The intestines are cut into short pieces,
(53)	*ore paa siri kopaa bari,*	then they are torn into strips,
(54)	*ore paa garuhu vamataa bari,*	then properly washed
(55)	*ore paa vaatei bari tea nahu.*	and put into a pot.
(56)	*O gonogonono mee na peepee riori, ore paa vaatei bari tea nahu.*	The lungs are also cut up and put into a pot.
(57)	*Amaa hum vai mee, a koburu, o ganusu ae amaa meha hum.*	Also the following parts, the heart, cartilages, and the other parts
(58)	*Be kavara, ore paa vaahio bona nahu teo suraa.*	When it is finished, the pot is set on the fire.
(59)	*Na nahunahu mi riori bono hiihii ore nin mataa.*	It is cooked with ginger so that it tastes good.

Chapter 27

Kave goroto – The turtle net

Mark Tahi & Enoch Horai Magum

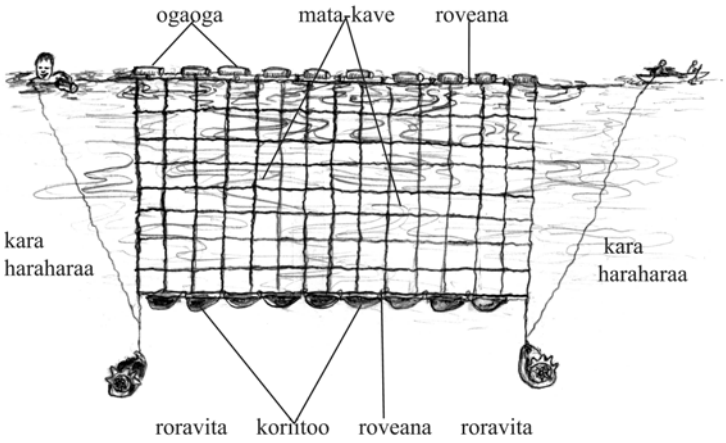

Figure 1: *Kave goroto* - Turtle net

(1) ***Kave goroto***

(2) *O kave goroto vai Teapu na paku-paku raara bono naono to dao raara bono baneo.*

Turtle net

The Teop turtle net, we make it from a tree that we call the bread-fruit tree.

Mark Tahi & Enoch Horai Magum. 2026. *Kave goroto* – the turtle net. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 193–197. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(3)	*O baneo bona he toro sii vaamanae koa.*	But the breadfruit tree must be quite young.
(4)	*A taba momohu toro paku ara, eara toro mosi gunaha o baneo.*	The first thing we must do, we must cut down the breadfruit tree.
(5)	*Beve obete nana teo kasuana, eara repaa kahu a kapa nae bono kehaa to dao raara bono sui.*	When it is lying on the ground, we scrape its bark off with a shell that we call *sui* 'ark clam'.
(6)	*Beara kahu vakavakavara e, eara repaa varoava e bono buaku ge o kukan o bon.*	When we have finished scraping it, we put it into the sun for two or three days.

(a) (b)

Figure 2: (a) *Koriitoo* - Tiger Cowrie, (b) *Sui* - Ark Clam

Figure 3: *Roravita* - Helmet Shell

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(7) *Beve raka vaantee, eara repaa hihi kahi e bono naono nae.*
When it is dry enough, we remove the fibres from its wood.

(8) *Beara hihi vakavara e, eara repaa hupihupi e bono sui.*
When we have removed them, we comb them with the ark shell.

(9) *Beara hupihupi vakavara e, a kiu vaa tea vinugu repaa taneo, ore tavus potee bona kanono.*
When we have finished combing them, the work of twisting starts, so that they become a string.

(10) *A kiu vai na antee nana bona buaku ge a dorana a otei tea peha kanono,*
This work needs two or four men for one string,

(11) *bea meha buaku ge a dorana vinugu batari bona meha kanono*
while another two or four twist another string.

(12) *A kiu vai toro vatotoena ni ara, tabae a kave toro bebeahu.*
This work we must share, because the net should become long.

(13) *Bea kiu vaa tea vinugu kavara, eara repaa vavaantee nia maa kanono,*
When the work of twisting is finished, we have made the strings long enough,

(14) *ei kou toro bebeahu vaantee.*
because they must be long enough.

(15) *Bea maa kanono vavaantee vakavara, eara repaa vaahana riori teo naono,*
When the strings have all become long enough, we hang them on a tree,

(16) *eara repaa rahi vatotobin riori.*
then we pull them straight.

(17) *Beve kavara o hum kiu bona, eara repaa taneo mana tea huha.*
When this part of the work is finished, we eventually start with the tying.

(18) *A kave na tanetaneo raara bona taba to dao raara bona tavara.*
The net, we start with a thing that we call *tavara*.[1]

(19) *Evehee, beara mei rara tea taneo, eara toro varaarare ni roho a tatabonata na kave bara bebeahu nae.*
But before we start, we must decide on the width of the net and its length.

[1]The *tavara* is a rectangular piece of *kururu* bamboo that is used to measure the size of the meshes, see (Chapter 29: 13).

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(20)	*Beara vuha vaapeha meo ipinoo to paa vamoromoroko ni vuara,*	When we have agreed on the measurement that we have talked about,
(21)	*eara paku vai a tavara to kahi ipinoo bata nom ara o mata kave.*	we make the *tavara* (a piece of bamboo) which we are going to use for mesuring the meshes of the net.
(22)	*Be kavara amaa vamoromoroko, eara repaa taneo tea huha kave.*	When the discussions are finished, we start tying the net.
(23)	*A kiu a beera, me kahi huha vuara bona maa bon amaa bero.*	The work is big, and we will tie (the net) many days.
(24)	*Be kavara a kiu vaa tea huha, eara repaa paku pete a kiu vaa tea ibun bono kehaa.*	When the work of tying is finsihed, we will continue with the work of threading the shells.
(25)	*Amaa kehaa bona to dao raara bono koriitoo.*	These shells we call *koriitoo* 'Tiger Cowrie'
(26)	*O koriitoo kou to kahi ibun raara teo roveana vaa paana kave, eove to kahi rahirahi vaadovo bata ni nom bona kave.*	The Tiger Cowry shells we thread onto the seam at the bottom of the net, they will pull the net down and make it sink into the deep sea.
(27)	*Be kavara a kiu bona, eara repaa gono pete maa o buo roravita mene vaataena kave.*	When this work is finished, we get two helmet shells for the bottom of the net.
(28)	*O peho teo meho punete, o meho he teo meho punete.*	One for one edge, the other one for the other edge.
(29)	*A bua kehaa bona to kahi ato vamasuu bata ni nom bona kave*	These two shells will hold the net steady
(30)	*to mene orooro kahi batana bona maa hum to kahi vavaagunaha kave raara.*	that otherwise would float away from the places where we would drop the net down.
(31)	*O buo kara haraharaa mee kahi pam ni raara teo buo roravita.*	We tie two feeling lines to the Helmet Shells.
(32)	*O ogaoga na kave he na paku raara bono naono no baneo to paa hihi kahi vuara bona kapa nae.*	The floats of the net, however, we make from the wood of the breadfruit tree from which we have removed its bark.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(33) *Na mosimosi vakakato raara beara ipinoo bata rae bona ta naono to paa vaantee vuara bona bebeahu no buo kubisi bebeahu na kuri raara.*
We cut it into short pieces, while measuring it with a piece of wood that we have made as long as the length of the two middle fingers of our hand.

(34) *Beara mosi kurukurus bata rae, a mosi toro kerun tamuana batana.*
When we cut it into pieces, the cut must always be diagonal.

(35) *Eara kahi mosi kurus bata nom, beo meho sii aba vaanana vaaraka bata ni rori bari teo suraa.*
We will do the cutting, while other people are warming and drying the pieces of wood over the fire.

(36) *Be kavara, eara repaa ibun mana riori tea kara kanono to dao raara bona roveana.*
When this is finihed, we thread them onto the string that we call *roveana* 'the seam'.

(37) *O kanono bona he na pakupaku raara bona roge.*
This string we make from the coastal hibiscus.[2]

[2]See (Chapter 12: 6).

Chapter 28

A vaahoa kave goroto – The launching of the turtle net

Enoch Horai Magum

(1)	*A vaahoa kave goroto na tei me nana bona maa taatate nae.*	The launching of the turtle net is associated with certain customs,
(2)	*O taatate bona o vasisio na vavasisio kurusu ni raara.*	These respected customs are very much respected by us.
(3)	*A otei vai a too aito toro viana ta buaku ge ta dorana ta otei, eove repaa mee ri bari rasuu tea aito.*	A man, an expert on herbs, selects two or four men, and then he takes them into the jungle to collect herbs.
(4)	*Beori aito vakavara maa, eori repaa ma hee ni bona aito tea peha moon to pasi ato ge kikira ni nom bona.*	When they have collected the herbs, they give them to a woman who will hold them or take care of them.
(5)	*A aito vai toro paku ara, beara vaasubunubu ni rara a vaahoa na kave goroto.*	We must collect these herbs, when we plan the launching of the turtle net for the next day.
(6)	*A moon vai to kahi ato ni nana bona aito toro vaavavina nana bona too vaahito na kave goroto.*	The woman who will hold the herbs must be the sister of the owner of the turtle net.
(7)	*Teo bon vaahoa na kave, eara repaa isuvu to buo koopu ruene,*	On the day of the net launch, we fill two bamboo water containers,
(8)	*eara repaa vaatei a aito teebona.*	and then we put the herbs into them.

Enoch Horai Magum. 2026. *A vaahoa kave goroto* – the launching of the turtle net. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 199–200. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(9)	*Beara tau tahoa rakaha, eara repaa vaobete o buo ruene komano sinivi to vaahae batana bona kave.*	Just when we are about to set off, we put the two water containers into the canoe which has the net on board.
(10)	*Beara nao komana tahii, eara repaa sisi mana a kave teebona.*	When we put to sea, we sprinkle the net with them.
(11)	*O hum busubusu ge veo goroto na vanata komana ni raara ei saka tea irihi haana,*	The place where the net is thrown or where the turtle netting is done, we know, this is not at the edge of the reef.
(12)	*Ahiki, amaa hum veo goroto toro kakaamuru to hiki nae o vasu.*	No, the places for turtle netting must be the white sand without stones.
(13)	*Beara busu gunaha nia kave en teo hum vasuvasu, a kave toro hana.*	If we threw the net at a place full of stones, the net would get caught up there.
(14)	*Mea maa hum veo goroto teara a ta Teapu ei Taenaruene, Teopasuna, Teanin.*	The turtle netting places of us Teop people are *Taenaruene*, *Teopasuna*, *Teanin*.
(15)	*Amaa hum bona kou na hiki nana to vasu, o kakaamuru koa.*	These places do not have any stones, just white sand.

Chapter 29

Kakavei – The bamboo frame net

Naphtali Maion

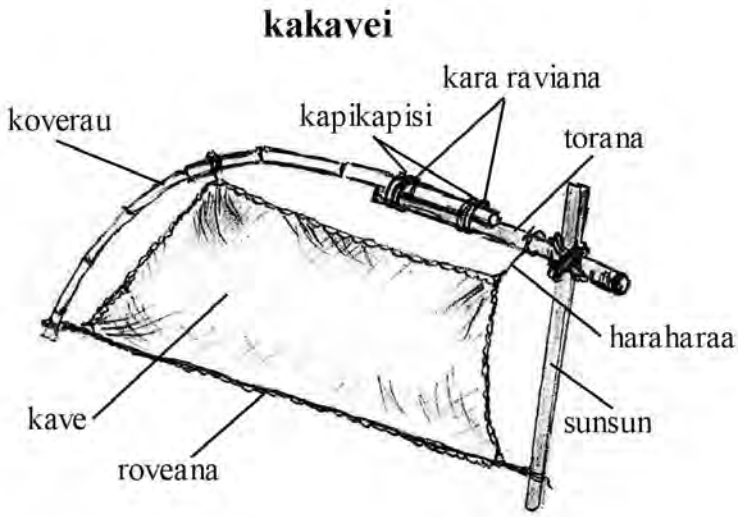

Figure 1: *Kakavei* - Bamboo-frame net

Naphtali Maion. 2026. *Kakavei* – the bamboo frame net. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 201–206. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Figure 2: *Hihiana* - Net needle

(1)	***A kakavei***	**The *kakavei* net**
(2)	*Vaamatatopo na maa taba*	The preparation of the things (you need to make a pair of *kakavei* nets):
(3)	*Momohu kona nia kave tabae tau paku an, a kave a beera ge a rutaa*	First, think about what kind of net you are going to make, a large net or a small one.
(4)	*Beo hum bona kavara, erau ean antee vai tea kaokao a maamihu taba na kakavei tean.*	When this part is finished, then you can go ahead with all the things of your *kakavei.*
(5)	*Kona ni amaa humhum na kakavei.*	Think of the parts of the *kakavei* net.
(6)	*A hena na maa taba paku na kakavei:*	The names of the things for making a *kakavei* net:
(7)	*1. koverau (baoru) - 2*	Two bent *koverau* bamboos[1]
(8)	*2. kapikapis - 8*	eight wedges (made of wood)
(9)	*3. kara raviana - 6*	six strings made of *raviana* vines[2]
(10)	*4. toorana (naono) - 2*	two *toorana* poles to which the bamboo is tied
(11)	*5. sunsun (miimiana) - 2*	two *sunsun* poles of *miimiana* palm wood[3],
(12)	*6. kara baneo ge kara kave - bero*	many strings made of fibres of the young breadfruit tree or the net vine[4]

[1]See (Chapter 10: 1ff.)
[2]See (Chapter 11: 75ff.)
[3]See https://dictionaria.clld.org/units/teop-miimiana
[4]See Chapter 8: 1ff, Chapter 11: 17ff, Chapter 27: 3ff.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(13)	*7. tavara (kururu) - 1*	a small rectangular piece of *kururu* bamboo (2 x 4 inches) that is used to measure the size of the meshes of the net
(14)	*8. hihiana (o koverau o rutaa)*	a net needle (made of a small piece of *koverau* bamboo)
(15)	*Bean tau paku a kakavei,*	When you are about to make a *kakavei*,
(16)	*evei amaa taba toro vaamatatopo an.*	these are the things that you must prepare.
(17)	*(1) O buaku o koverau mene o buo baoru*	Two *koverau* bamboos for two bamboo frames.
(18)	*Mosi amaa koverau vai amaa manoto vamataa.*	Cut fully matured *koverau* bamboos.
(19)	*Vaaraka vamatai tea roava.*	Let them thoroughly dry in the sun.
(20)	*Taraha taatagi amaa koverau bona.*	Carefully level the outside of these *koverau* bamboos (i.e. the knots).
(21)	*(2) O buaku o toorana toro mosi maa. Vaarakai tea roava.*	The two *toorana* poles must be cut. Let them dry in the sun.
(22)	*(3) Mosi maa o miimiana mene o buaku o sunsun.*	Cut a *miimiana* palm for the two *sunsun* poles
(23)	*Vaarakai mee tea roava.*	Let it also dry in the sun.
(24)	*(4) Mosi a vahara baneo, kahu a kapa nae, vaatei tea roava ore raka.*	Cut young breadfruit trees, scrape off the bark, put them into the sun to dry.
(25)	*Be raka, hihi a kara nae mene paku bona kanono.*	When they are dry, pull their fibres off to make the string.
(26)	*Bean rake, ean repaa kurus kara kave maa rasuu.*	If you want, you cut net vines in the jungle.
(27)	*Vaarakai tea roava, ean repaa kahue bona kehaa.*	Let them dry in the sun, and then you scrape them with a seashell.
(28)	*Ean repaa paku a kanono mene huha bona kakavei.*	Then you make the string for tying the *kakavei* net.
(29)	*(5) Tasu varaba maa a raviana rasuu.*	Cut the *raviana* vines in advance in the jungle.
(30)	*Vaarakai tea roava bean siri kopaa varaba batae.*	Let them dry in the sun after you have torn them lengthwise apart.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(31) *(6) O kapikapis: Amaa ta naono vaarii na taraha vakavara raara mene kapis bona maa pampam na kakavei.*
The wedges: we carve all these pieces of wood to wedge them into the lashings of the *kakavei* net.

(32) *Taraha vaantee eta kukan totoka to antee nana bona buaku a kakavei.*
Carve eight pieces which will be enough for the two *kakavei* nets.

(33) *(7) Vaamatatopo varaba a tavara.*
Prepare the *tavara* (piece of wood for measuring the meshes of a net).

(34) *(8) Vaamatatopo varaba o koverau o rutaa mene o hihiana.*
Prepare a small piece of *koverau* bamboo in advance for the net needle.

(35) ***Vaamatatopo a kanono***
Prepare the string

(36) *O hum kiu vai na beera oha vareko nana.*
This part of the work is quite labour intensive.

(37) *Ean kahi tagihu nom rasuu tea kurus kave.*
You go into the jungle to cut net-vines.

(38) *O kave na abeabe batana tea naono, saka tei vananaoana vira haana me.*
The net vine is creeping on the trees, it is also not very far away.

(39) *Bean suguna koa to abe vaberobero riori,*
When you have arrived where they are creeping in large quantities,

(40) *ean repaa saku koa tea kurus, ean repaa voosu vahaa koa.*
you just quickly cut them, and then you go back home.

(41) *Bean voosu me amaa dee kave, pasi vaobete roho noman,*
When you come home with loads of net-vines, you first lay them down,

(42) *eve re meapa roho.*
so that they become flexible.

(43) *Beve meapa, ean repaa hihi manae,*
When they are flexible, you eventually remove the fibres from them,

(44) *ean repaa kahu batae mee.*
then you also scrape them.

(45) *Bean kahu vakavarae,*
When you have completely scraped them,

(46) *ean repaa varoava e ore raka.*
you put them into the sun to dry.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(47) *Be raka vamataa, ean repaa viru a kanono tean.*
When they have dried up well, you twist your string.

(48) *A kanono bona to kahi huha noman bona kakavei tean.*
This string (is the one) that you are going to tie your *kakavei* net with.

(49) *A kanono toro antee bona buaku a kakavei a bua vapara.*
The string must be (long) enough for the pair of *kakavei*-nets.

(50) ***Huha kakavei***
Tying *kakavei*-nets

(51) *Bea maa taba vai matatopo, ean antee vai tea huha a kave.*
When these things are prepared, you can now tie the net.

(52) *A taba to pasi paku noman, ei a kanono vai to kahi huha noman bona buaku a kave.*
The thing that you will make, this is the string that you use for tying the two nets.

(53) *A kanono bona pasi vaabebeahu kurus noman ore antee bona buaku a kave.*
You will make this string very long so that it is long enough for the two nets.

(54) *A meha kanono to kahi paku noman, ei a roveana.*
Another string that you'll make is the *roveana*.

(55) *A roveana eve a kanono to taviri vakavara nana bona kave.*
The *roveana* is the string that surrounds the whole net as a seam.[5]

(56) *A kanono bona ge a roveana to rahi parata nana bona kave teo vuri to nove noman a kakavei.*
This string or *roveana* pulls the net open when you tie the *kakavei* net to the frame.

(57) *Bea bua kanono vai kavara, ean matatopo vai tea paku a sinoo na kave.*
When the two strings are finished, you are prepared to make the frame of the net.

(58) *A kanono tean a matatopo,*
Your string is prepared,

(59) *ean viru vai a kanono tea hihiana.*
you now wind the string now around the net needle.

(60) *Ean gono vai a tavara,*
You get the *tavara* (to measure the size of the meshes).

(61) ***A sinoo na kave:** vatotomo na maa humhum na kakavei*
The frame of the net: putting the parts of the *kakavei* net together

[5]Compare Chapter 27, Figure 1

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(62)	*A maamihu taba paa vaamatatopo vaevuru, a kakavei kahi vatotomo raarai.*	Everything is aready prepared, we will put the *kakavei* net together now.
(63)	*(1) Gono o toorana bara o sunsun, pampam vabuaku ri bona kara raviana.*	Get the *toorana* pole and the sunsun pole, tie them together with two lashings of the *raviana* strings.
(64)	*(2) Gono o baoru, pam mi nai bono pasu no toorana.*	Get a bamboo pole, lash it together with the end of the *torana*-pole.
(65)	*Pam i bona kara raviana (a buaku a pam).*	Lash them together with the *raviana* strings (two lashings).
(66)	*(3) Tasu vakikis amaa pampam bona maa kapikapis.*	Firmly tighten the lashings with the wedges.
(67)	*Teo peho sinoo tapa ni o dorana o hum.*	Drive four pieces (i.e. wedges) into the lashings of one frame.
(68)	*Be kavara, o sinoo paa matatopo vaevuru.*	When it is finished, the frame is already prepared.
(69)	*(4) Nove a kakavei.*	Tie the *kakavei* net to the frame.

(70)	***Vuri nove na kakavei***	**Steps of tying the *kakavei* net to its frame**
(71)	*(1) Vakisi nio pasu kave teo pasu no baoru.*	Tie an edge of the net to the end of the bamboo pole.
(72)	*(2) Vakisi nio meho teo sunsun.*	Tie another (edge) to the *sunsun* pole.
(73)	*(3) Vakisi nio meho pasu kave romuno baoru.*	Tie the third edge of the net to the middle of the bamboo pole.
(74)	*(4) Vakisi nio vakosina teo toorana.*	Tie the end of net to the *toorana* pole.
(75)	*A kakavei paa taparata vamataa vaevuru.*	The *kakavei* has now already properly unfolded.
(76)	*Bean toku, tara teo vaa'abeabe na kakavei gina.*	If you do not understand it, look at the picture of the *kakavei* above.

Chapter 30

Varigomo – A kind of net fishing at low tide

Enoch Horai Magum

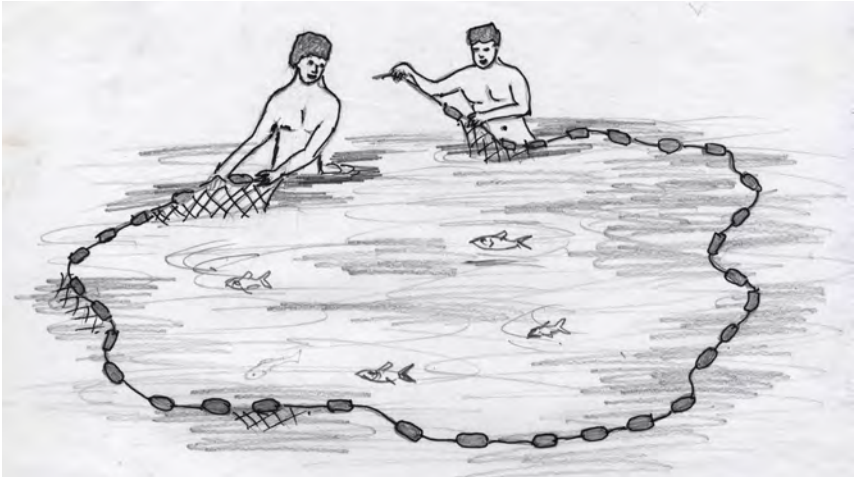

Figure 1: *Varigomo* - Net-fishing at low tide

(1)	*A varigomo, eove o peho kaku vagana vaa Teapu to paku raara bona kave.*	*Varigomo* is a kind of fishing in the Teop area that we do with a net.
(2)	*A kave nae he a bebeahu ae a mata rutaa.*	The net used for it is long and has small meshes.

Enoch Horai Magum. 2026. *Varigomo* – a kind of net fishing at low tide. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 207–209. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(3)	*O kaku vagana bona na pakupaku raara teo gohoho ge teo tarahi, ei tea maa hana taataana, sa ei haana namana.*	We do this kind of fishing during the in-coming tide or the ebbing tide, this means at places where we can walk, this is not in the deep ocean.
(4)	*O kaku vagana bona sa vaapenapena haana, beo aba o bero nao, evehee a bero amaa vuri, o kukan koa o sinivi to tahoa rori.*	This kind of fishing does not forbid that many people go, but most of the time it is only three canoes that set off.
(5)	*O peho sinivi to vaahae nana bona kave mi bona kukan a aba, a buaku vaa tea vavaagunaha kave, a peha he a too horohoro.*	One canoe takes the net with three people on board, two for letting the net down, and one person is the punter.
(6)	*O meho buo sinivi he mene vahakaa.*	But the two other canoes have to beat the water to chase the fish into the net.
(7)	*O kaku vagana nae he na paku vonaen:*	The fishing is done as follows:
(8)	*Beara hua batara, eara toro tara bata naora beo iana an rori.*	While we are paddling along, we look where the fish eat.
(9)	*Bea too horohoro sue voen na mataa nana, eara repaa hua vahuus o pata iana bari.*	When the punter says, it is good, we paddle close to that school of fish.
(10)	*A peha aba repaa gunaha me bono peho punete kave.*	Then one person goes down with one edge of the net.
(11)	*O sinivi repaa hua taviri bono pata iana, bea meha aba rurun gunaha bata ni nana bona kave.*	The canoe then paddles around the school of fish, while the other man is dropping the net along the way.
(12)	*O meho buo sinivi he paa taneo vaevuru tea vahakaa, o meho tea papa matau, o meho he tea papa keruka.*	The other two canoes have already started to beat the water, one on the right side, the other one on the left side.
(13)	*Pasi vatete maari bono pata iana, ore vatete hovo komana kave.*	They will chase the school of fish, and they chase them into the net,
(14)	*Bea bua too vavaagunaha kave rahi vatatana bata ni rori bono buo punete kave, eori repaa asun bona iana en komana kave.*	When the two net-droppers pull the two edges of the net together, they kill the fish inside the net.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(15) *Amaa aba vai to sa paa hana hau tea maa mata kave, kahi tahitahi ri vuara bona makaree.*
Those that have not been caught in the meshes of the net, we will spear with the fishing spear.

(16) *Amaa aba vai he to paa hanau teo mata kave na asun ri raara bono popoura.*
But those that hang in the meshes of the net, we kill them with the baton.

(17) *Be kavara, eara repaa vaahae vahabana a kave, eara repaa nao pete teo meho hum vai to anan bata rio iana.*
After that we take the net again on board and go to another place where the fish eat.

(18) *A vaakavara vagana na tei bata koana tea masi ge beo gohoho beera oha maa, eara repaa voosu vaha vaan.*
The end of the fishing trip is when it is low tide and when the incoming tide is too big; then we go home, back to the village.

Figure 2: *Makaree* - Fishing spear

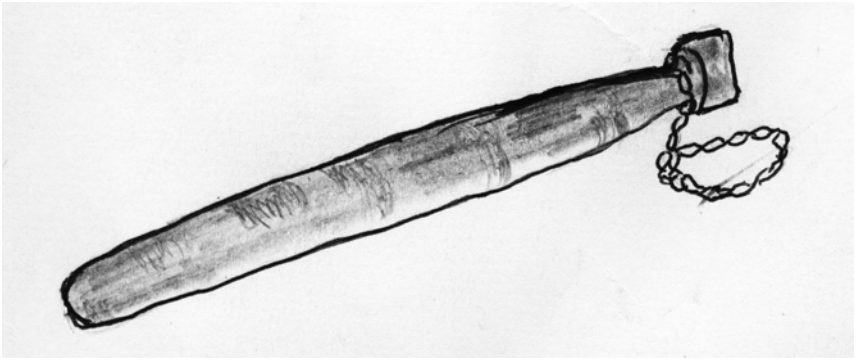

Figure 3: *Popoura* - Baton

Chapter 31

Seige – Fishing with a net fixed on two mangrove poles

Enoch Horai Magum

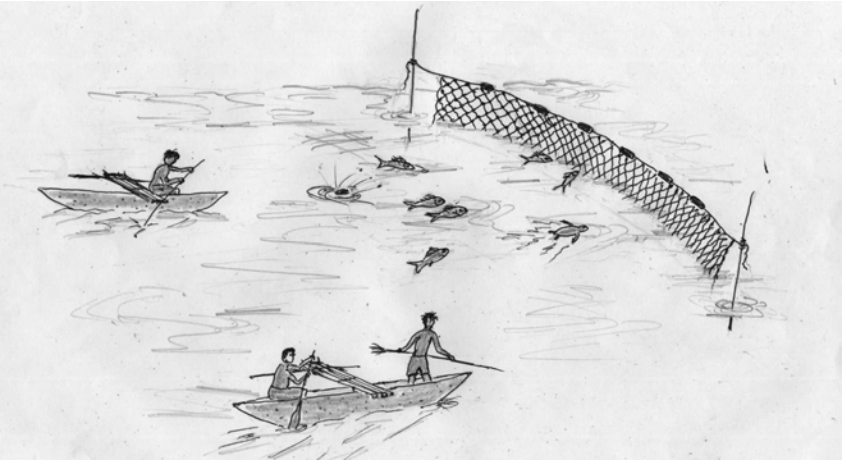

Figure 1: *Seige* - Fishing with a net fixed on two mangrove poles

(1) *O meho kaku vagana vaa tea kave en teara, a ta Teapu, na dao raara bono seige.*
Another kind of fishing with nets here with us, the Teop people, is called *seige.*

(2) *A vagana bona saka vaapenapena haana bea peha gea buaku ge bero aba nao tea nao vagana.*
This kind of fishing allows one or two or many people to go fishing.

Enoch Horai Magum. 2026. *Seige* – fishing with a net fixed on two mangrove poles. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 211–212. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(3)	*O kaku vagana bona he na paku vonaen:*	This kind of fishing is done as follows:
(4)	*Eara na vaahae rara a kave, eara repaa hua vo tea maa hum to vavaasun kave komana raara.*	We take the net on board, then we paddle to the places where we put up nets.
(5)	*Amaa hum bona he toro hum vai to gunagunaha kaakoo rio iana beve tarahi batana.*	These places must be places where the fish go when the tide is ebbing.
(6)	*O kaku hum bona he eiei tea maa hoa.*	This kind of place is in the passages.
(7)	*Beara suguna, eara repaa busu nia kave, eara repaa rahi ge vaasun pina nie bona hanana teo iana.*	When we arrive, we throw the net, then we pull it or put it up so that it blocks the way of the fish.
(8)	*Eara repaa pam nio buo punete na kave teo buo boon to paa vaasun vuara, eara he tea mei tea vaagunaha a kave.*	Then we tie the two ends of the net to two mangrove poles that we have erected before we let down the net.
(9)	*Beve kavara, eara repaa vahakaa pina koa maara o iana to mene gunaha kaakoo teo meho hum.*	After that we beat the water to prevent the fish from going down to another place.
(10)	*Bea tahii taneo bata mana tea tarahi, eove o vuri to kahi taneo hana rio iana.*	When the sea eventually starts ebbing, this is the time when the fish start hanging in the net.
(11)	*Beori hana rori, eara na antee batara tea no ropusu kahi riori bona kave, ge be hiki, ei mana, beve tarahi vakavara.*	When they are hanging there, we can take them out of the net, or if they don't, this eventually means that it is low tide.
(12)	*Evehee, eara toro usu bata koa ni rara o iana vai o bebeera to mene buno kurukurus bona kave, a kave repaa taparata*	But we must watch the big fish that they do not move so much that the net gets opened.
(13)	*O kaku vagana vai o mataa tabae eara sa hua binubinu haara tea rake ge vatevatete a iana.*	It is a good kind of fishing, because we do not paddle around to search for or chase the fish.
(14)	*Eara kahi sun ihuana koa nom beori hana rori tea kave.*	We would just stand still waiting for them to hang in the net.
(15)	*Bea tahii masi vakavara, eara repaa voosu vahaa vaan.*	When the sea is at low tide, we go home back to the village.

Chapter 32

Tanaa – Fishing in a group during low tide

Helen Kobaa Magum & Shalom Magum

Figure 1: *Tanaa* - Fishing in a group during low tide

(1) *Enaa kahi vahutate ni nom a vagana vai to dao raara a ta Teapu bona tanaa.*
I am going to tell you a story about the fishing that we Teop people call *tanaa*.

(2) *Bea ta Teapu tau nao tea tanaa, eori repaa dee bona maa kave teori tea masi vai to dao raara bono pasu masi.*
When the Teop people are about to do the *tanaa*, they take their nets to the reef during the low tide that we call *pasu masi* "first low tide in the morning".

(3) *A masi bona na tavutavusu nana teo pasu nubunubu be boobon vakisi nana.*
This low tide appears in the very early morning when it is still dark.

Helen Kobaa Magum & Shalom Magum. 2026. *Tanaa* – fishing in a group during low tide. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 213–215. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(4)	*Tea matana takaha, a ta vaan repaa vaon bona maa kave teori tea maa sinivi,*	At the beginning of dawn, the people load their nets into the canoes,
(5)	*eori repaa hua vo tea hoa, ei beo puhana mei batana tea masi gunaha.*	and then they paddle to the passage before the tide has ebbed down.
(6)	*Beori suguna, eori repaa nao busu vatanaa pina ni bona hoa,*	When they have arrived, they will go and throw their nets in a row, thus blocking the passage.
(7)	*Ei vira vakavara ni rori bono kave, eori repaa sun teebona.*	Now when having dropped all the nets, they stand there..
(8)	*Eori repaa vararana pina naori murina maa kave beori vahakaa pina batari.*	They will line up making a blockade behind the nets, while beating the water and blocking the passage.
(9)	*Vahakaa rori bea iana nomaa nana, ei kou na gunaha maari tea hoa ore paa ma ona rori tea kave.*	They are beating the water while the fish are coming, and now they are coming down the passage and then get trapped in the nets.
(10)	*Ei be ona, sa antee vaha haari tea nao, pasi topo koa nom komana kave.*	When they are trapped, they cannot go away, but will just be stuck in the nets
(11)	*Bea masi masi maa, ei be gunaha rakaha,*	When the sea is at low tide, when it has completely gone down,
(12)	*a tavaan repaa taneo tea pute bona iana komana kave*	the people start pulling the fish out of the nets
(13)	*to paa hapusu vaevuru.*	that are already full.
(14)	*Beori pute vakavara bona iana vai to tei nana komana kave,*	When they have finished pulling out the fish that are in the nets,
(15)	*eori repaa kao hovo pete komana kopua, eori repaa tahi bona iana vai to paa pinou ei komana kopua bona.*	they will also wade through the pools in the lagoon and spear the fish that have been trapped in this lagoon.
(16)	*Beori vagana vamatamataa rakaha bari, be kavara rakaha,*	When they have indeed fished every fish,
(17)	*eori repaa vaahae vahaa bona maa kave vo teo sinivi,*	they will load the nets into the canoes again,
(18)	*eori repaa voosu vahaa vo vaan mi bono sinivi iana.*	and return home with the canoes full of fish.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(19) *Meha papana rahi batari bona ibun iana to paa tahi vori tea maa makaree teori.*
Others thread the fish that they have speared with their fishing spears on strings.

(20) *Eve o si vahutate no matapaku vaa tea tanaa ei teo kaku vagana vaa Teapu.*
This is the little story of the practice of *tanaa*, this is a type of fishing in the Teop area.

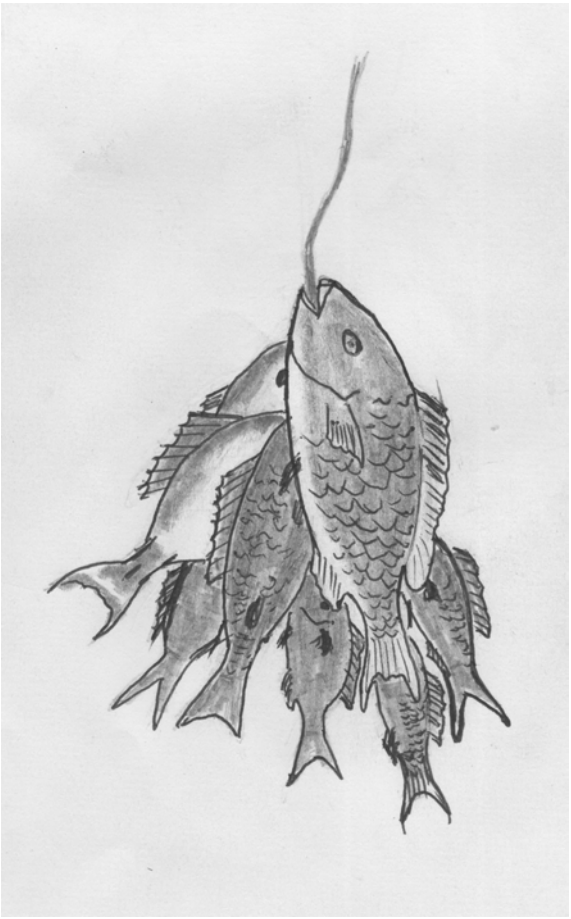

Figure 2: *Ibun iana* - Fish threaded on a string

Chapter 33

Vavaaiku – Angling with a swinging bait

Enoch Horai Magum & Shalom Magum

(1)	*O kaku vagana to dao raara bona vavaaiku na pakupaku raara namana, beara hae batara teo sinivi.*	The kind of fishing that we call *vavaaiku* 'letting it swing', we do it in the ocean while we are sitting in the canoe.
(2)	*Na pakupaku raara bona kanono ae a iri ae sa taba sa ponisi mene dee gunaha bona kanono.*	We do it with a string and a hook and something heavy to get the string down.
(3)	*Beara mei rara tea tahoa, amaa taba vaarii toro vaamatatopo.*	Before we set off, these things must be prepared.
(4)	*A kanono to vavaaiku ni raara na paku vonaen:*	The string that we use for angling is made as follows:
(5)	*Eara na kisi ni roho rara a ta booru tea kanono, eara repaa kisi mana nia iri putaa.*	We first tie a piece of lead to the string and then we tie the hook below it.
(6)	*Ge beara rake, eara repaa kisi nia iri gina bea ta booru en putaa.*	Or if we want, we tie the hook on top while the piece of lead is below the hook.
(7)	*Teo kaku vagana vai, eara na beana rarai.*	For this kind of fishing, we bait it (the hook).
(8)	*Eara he toro beana nio urita, iobo ge a iana komana vahaa, beara peepee varutarutaa e.*	We must bait it with an octopus, a sea-saussage, or even a fish when we have cut it up into little pieces.

Enoch Horai Magum & Shalom Magum. 2026. *Vavaaiku* – angling with a swinging bait. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 217–218. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(9)	*Bea maamihu taba vai matatopo, eara repaa hua hiava namana.*	When everything is prepared, we paddle up to the deep sea.
(10)	*Eara repaa vaagunaha a kanono, vaantee koa tobina, eara repaa vaabunobuno koa ni rae, a beana re potee voen na vavaaiku nana.*	Then we let the string down, but only half way, and then move it to and fro so that the bait looks like swinging.
(11)	*Teebona to kahi avuhu ae tara mau o iana bona, eori repaa ma agomo bona beana.*	So the fish will smell and see it, and then they come and swallow the bait.
(12)	*Beara haraa voen na rahi batana bona kanono, eara repaa vaatasu hiava nia kanono,*	When we feel that a fish is pulling the string, we fling the string upwards,
(13)	*a iri repaa kao hopo rivona iana, eara repaa rahi hiava e kou.*	so that the hook moves into the mouth of the fish, and then we pull it up.
(14)	*Eara na antee rara tea paku o kaku vagana vai tea bon, tea roava, teo tarahi ge teo puhana.*	We can do this kind of fishing at night, during the day, when the tide is ebbing or at high tide.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 34

Vavaatoa – Kite fishing

Naphtali Maion

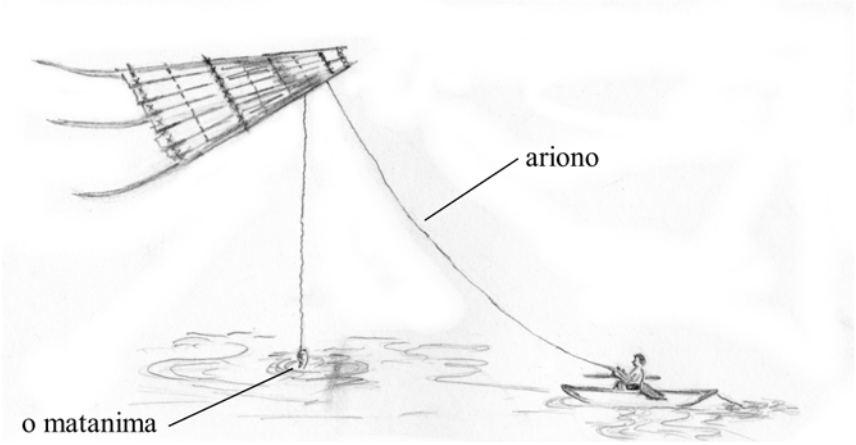

Figure 1: *Vavaatoa* - Kite fishing

(1)	***Vagana vaa tea vavaatoa***	**Fishing with the kite**
(2)	*A vavaatoa na vavaanaovo riori tea iravata.*	They let the kite fly in the wind.
(3)	*Evehee, saka ei haana komana vaan. Ahiki.*	But this is not in the village. No.
(4)	*Na dee riori tahii.*	They take (it) to the sea.

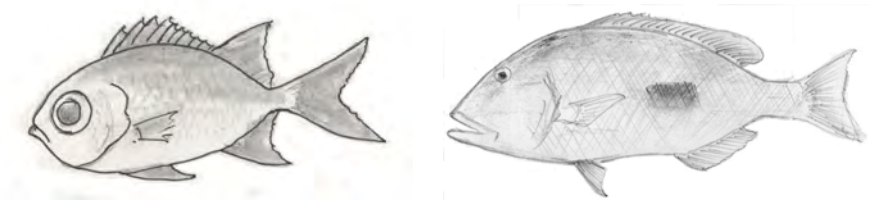

Naphtali Maion. 2026. *Vavaatoa* – kite fishing. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 219–221. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(5)	*A iravata to vavaanaovo vavaatoa suku riori saka hoa vabeera haana.*	The wind in which they let kites fly does not blow strongly.
(6)	*Bara o puhana to paku riori bona vagana bona saka beera haana mee.*	And the high tide during which they do this fishing is not strong either.
(7)	*A tahii toro ato koa bono takatakaku mooman.*	The sea water only needs to touch your ankles.
(8)	*A vavaatoa na vakis ni riori bona buaku a kanono ariono.*	They tie two *ariono* strings to the kite.
(9)	*A peha ariono na vakis nana matana vavaatoa, a vaabuaku na vakis nana murinae.*	One *ariono* string is tied to the front of the kite, the second one is tied behind it.
(10)	*A too vagana na ato kaakoo batana tea ariono vaa matana.*	The fisherman holds the string that is tied to its front.
(11)	*A matanima he na hana batana tea ariono vaa teo vamurina.*	The *matanima*, the hook of the kite, hangs on the *ariono* string in the back.
(12)	*Beori vaanaovo bono vavaatoa, saka vaanaovo pinopino haa riori.*	When they let the kites fly, they do not let them fly carelessly around.
(13)	*Na tara rori bona matanima be tei koa toonuna tahii,*	They see that the *matanima* just stays on the surface of the sea,
(14)	*ore paa vaantee koa bari teebona.*	and then they let it stop there.
(15)	*A too vagana be pita mi bona vavaatoa, a matanima ore paa tereree bata koana toon na tahii.*	When the fisherman walks with the kite, the hook of the kite only hovers over the surface of the sea.
(16)	*O iana toro tara bari be tereree batana, ore paa kao bari,*	The fish will see it when it is hovering over the surface,
(17)	*ore paa kao bari ore paa no koto bari.*	then they approach and bite them.
(18)	*Pasi koto bata nom, beori hana.*	They will bite them, while they are hanging there.
(19)	*A vavaatoa na ponisi nana ore paa rahi gunaha bari,*	The kite is heavy, they pull it down,
(20)	*ore paa ato bona iana.*	and then he (the fisherman) grabs the fish.
(21)	*Eve koa to paku bata vo riori, ore suguna komana*	That's how they do it until

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(22)	*beo iana bero vaantee bono rake teori, ore paa voosu vahaa.*	they have as many fish as they wanted, and then they return home.
(23)	*Evei o iana to rahirahi maa riori tea vavaatoa;*	These fish that they catch with the kite;
(24)	*saka kavara rio iana haana, ahiki.*	it is not all fishes, no.
(25)	*O iana vai koa (1) hori, (2) hoohoa, (3) pasuaromo, (4) ponpon.*	It is only the following fishes: (1) *hori* squirrel fish, (2) *hoohoa* needle fish, (3) *pasuaromo* emperor, (4) *ponpon* needle fish.
(26)	*Bea tahii masi, ore paa vakavara vagana.*	When the tide goes down, they finish kite fishing.

(a) (b)

Chapter 35

Vagana haopi – Catching wrasses by hand

Helen Kobaa Magum & Shalom Magum

(a) (b)

Figure 1: (a) *Mataberam* - Rockmover Wrasse, (b) *Haopi Suuna* - Genuine Wrasse

(1)	*O haopi a hena na iana vai to teitei batana paano kasuana.*	*Haopi* (Wrasse) is the name of a fish that stays underground.
(2)	*Na tei me nana bono buaku o kaku haopi.*	There are two kinds of wrasse.
(3)	*O vuaba vai o beera na dao raara bono mataberam.*	The big one is called *mataberam* (Rockmover Wrasse).

Helen Kobaa Magum & Shalom Magum. 2026. *Vagana haopi* – catching wrasses by hand. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 223–224. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(4)	*O vuaba vai o varutaa na dao raara bono haopi suuna.*	The smaller one is called *haopi suuna* (genuine wrasse).
(5)	*Evehee o hena beera o haopi.*	But the general name is wrasse.
(6)	*Beara tau vagana haopi, eara repaa tara rakerake bata o sii vahara vasu beori ravun vaa tea vaakororovi rori.*	When we are about to catch wrasses, we search for little stones being heaped up in a circle.
(7)	*Beara tara ahe eve, eara toro huu hopo ni nao a sinaka,*	When we spot it, we must push the fishing-stick into it,
(8)	*ei pasi pahin tahi ahe koa vuara.*	this (means) we will immediately spear it.
(9)	*Eara repaa kasi, are kasi antee beara kasi ahe komana e.*	Then we will dig and dig until we recognize it.
(10)	*Ato nie teo buo ketaa nae, eara repaa rahi tavusu e.*	(We) hold it on its two gills, and then we pull it out.
(11)	*Ei asun vamate vai ara.*	Now we kill it.
(12)	*Evehee na teitei batana a sii vapara nae.*	But usually there is also its partner.
(13)	*Goe tea nao vananaoana vira bean asun vakavara o peho.*	Don't go too far away when you have killed one.
(14)	*Tara rakerake vaha koa o meho rihinae.*	Just search for the other one nearby.
(15)	*Ean paa kasi e.*	You dig it out.
(16)	*Eara samin doana haara, na pahin kasi ona bata koa raara.*	We never fail, we immediately dig (and) catch (it).
(17)	*Eara toro matatopo bata koara to mene rosin tavusu maa.*	We must be prepared that it might come out (and) escape.
(18)	*Kikira vakikis bata koa ni nom eve.*	Just keep carefully watching it.
(19)	*Eara mee toro goe tea ato o haopi en vihi nae, ei kou to mene dohi ore paa rosin.*	Also, we must not hold the wrasse on its tail because it might slip (out of your hands) and escape.
(20)	*Evei o sii vahutate vaa tea vagana haopi.*	This is the little description of catching wrasses.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 36

Paka suva – Fish poisoning leaves

Helen Kobaa Magum, Shalom Magum, & Joyce Maion

Figure 1: *Paka suva* - Fish poisoning leaves

(1)	*Enaa kahi vahutate ni nom havee to suvasuva vaavaha mi raara a paka suva, eara a ta Teapu.*	I am going to describe how we poison fish with *suva* leaves, we the Teop people.
(2)	*Beara mei rara tea nao tea suva-suva tea masi,*	Before we go to poison fish on the reef at low tide,

Shalom Magum Helen Kobaa Magum & Joyce Maion. 2026. *Paka suva* – fish poisoning leaves. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 225–226. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(3)	*eara toro matatopo roho amaa taba to pasi dee raara tea suvasuva.*	we must prepare the things that we take with us to poison fish.
(4)	*Momohu eara toro nao rasuu tea osi paka suva teo hum to neba komana raara eve.*	First we must go to the jungle to pick the *suva* leaves at the place where we plant them.
(5)	*Beara osi, eara toro osi vaberobero, eara repaa dee voosu eve.*	When we pick the leaves, we must pick plenty and carry them home.
(6)	*Beara tau nao, eara repaa vaobete a paka suva teo hoi.*	Before we go, we put the *suva* leaves into a basket.
(7)	*Eara repaa kae vo tea masi.*	Then we carry it to the reef.
(8)	*Beara no suguna tea kopua, eara repaa tara voen, o iana na tei rori teebona,*	When we arrive at a pool and see that there are the fish,
(9)	*eara repaa vahio o hoi paka suva.*	we put the basket with the *suva* leaves down.
(10)	*Eara repaa taneo tea buhaha a paka suva.*	Then we start rubbing the *suva* leaves into pulp with our hands.
(11)	*Buhaha bata mi raara bono kasuana to karusu bata raara komana kopua.*	We rub them with sand that we collect with our hands in the pool.
(12)	*Eara buhaha batara, beara peo binubinu bata ni rae komana kopua, ge tea maa avaava teo vasu.*	We rub them into pulp, while scattering them everywhere in the pool or in the caves in the stones.
(13)	*Beara suva batara, eara repaa tara voen o iana na mate batari, eara repaa antee tea buhaha a paka suva.*	When we do the poisoning, and we see that the fish are dying, we stop rubbing the *suva* leaves into pulp.
(14)	*Eara repaa taneo tea mosi o iana to bubuutoo bata maana.*	Then we start killing the struggling fish with a knife.
(15)	*A paka suva vai to paa buhaha vuru ara, na kaokahi koa raara komana kopua,*	The *suva* leaves that we have rubbed into pulp we leave in the pool.
(16)	*ei kou paa kavara vaevuru a kikis nae.*	because their strength has already gone,
(17)	*Eara repaa kae voosu o hoi iana.*	Then we carry the basket full of fish home.
(18)	*Eve koai o sii vahuatate kakato vaa tea suvasuva nia paka suva.*	This is the short description of poisoning fish with *suva* leaves.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

Chapter 37

Ana suva – Fish poisoning roots

Helen Kobaa Magum, Shalom Magum & Joyce Maion

(1)	*Enaa kahi vahutate ni nom havee to suvasuva vaavaha vo raara,*	I am going to describe how we poison fish,
(2)	*beara suvasuva nio ana suva.*	when we poison fish with the *suva* root, the 'poisonous root'.
(3)	*Beara tau nao tea suvasuva, eara toro matatopo amaa taba to pasi dee raara.*	Before we go to poison fish, we must prepare the things that we will take there.
(4)	*Momohu eara na tagihu rara rasuu,*	First we go into the forest.
(5)	*Eara repaa kasi amaa ana suva en to neba komana raara e.*	We dig out the *suva* roots where we plant them.
(6)	*Eara repaa dee voosu vaan,*	Then we carry them home to the village,
(7)	*eara repaa ihuana koa rara vaan beara sisira rara o tarahi vaa tea roava ge tea bon.*	and just wait in the village, while we are observing the ebbing tide during the day or the night.
(8)	*Beara tara voen, a masi na mataa nana tea suvasuva,*	When we see that the reef is good for fish poisoning,
(9)	*eara repaa vaobete a ana suva teo hoi, bara a vasu.*	we put the *suva* roots into a basket, and a stone.
(10)	*Eara repaa kae eve vo tea masi.*	Then we carry it to the reef.
(11)	*Beara suguna tea kopua to pasi suva ni raara,*	When we arrive at the pool that we intend to poison,

Chapter 39

Hovuhovu iobo – Digging out sea-sausages

Helen Kobaa Magum & Shalom Magum

Figure 1: *Hovuhovu iobo* - Digging out sea-sausages

(1) ***Hovuhovu iobo***
(2) *O iobo a peha taba vaa tahii to ani-ani raara a ta Teapu.*
(3) *A taba bona na teitei batana paano kasuana ei komana tahii tea maa hum kakaamuru.*
(4) *Beara tau nao tea vagana iobo, eara toro dee o pusu hiovu, a sinaka ae a bonaa, eara re nao tea masi.*

Digging out sea-sausages
The sea-sausage is an animal of the sea that we Teop people eat.
This animal stays underground in the sea in places with white sand.

Before we go to catch sea-sausages, we must take a digging stick, a *sinaka* stick and a fishing basket, then we go to the reef.

Helen Kobaa Magum & Shalom Magum. 2026. *Hovuhovu iobo* – digging out sea-sausages. In Ulrike Mosel (ed.), *The material culture of the Teop people on Bougainville: Texts on plants, house building, canoes and fishing*, 231–235. Berlin: Language Science Press. DOI: ??

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(5) *A bonaa he na vabibiinoo ni raara raparaara.* The fishing basket we carry on our side.

Figure 2: *Pusu hiovu* - Digging stick

Figure 3: *Sinaka*

(a) (b)

Figure 4: (a) *Bonaa vabibiinoo* - Fishing basket, (b) *Iobo* - Sea-sausage

(6) *Beara suguna teo hum hovuhovu iobo, eara repaa taneo tea tara rakerake bata riori.* When we arrive at the place for digging out sea-sausages, we start searching for them.

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

(7) *Beara tara a sii puhuku kakaamuru, eara repaa kona voen o iobo na tei nana.*
When we see a little heap of white sand, we know that there is a sea-sausage.

(8) *Eara repaa hovu hopo ni nao a ta hiovu, beara hogo bata ni naora ta meha papa kuriraara.*
Then we stick the digging-stick inside (the heap), while we are pushing our other hand inside.

(9) *Eove to kahi ato naona bono iobo bea ta hiovu gae hiava maa bona.*
It will get hold of the sea-sausage when the digging stick lifts it up.

(10) *Beara mei rae tea vaobete e komana bonaa, eara toro pisin roho e, eara repaa vaobete mana e komana bonaa.*
Before we put it into the fishing basket, we must turn the sea-sausage inside out, then we eventually put it into the basket.

(11) *Eara pasi paku bata koa vo nao nom teebona, ore antee komana beo manin vagana tean kavara ge ei beo puhana puhana maa.*
We will do it like this, until you don't feel like fishing anymore or the high tide has come in.

(12) *A kiu vaa tea tatasu iobo na pakupaku vaha raara kasuana en vaan.*
The work of beating the sea-sausages, we do it again on the beach here in the village.

(13) *Eara na tasu vatamee ae vamuraka ni rara o iobo, tea tabae o iobo o taba o torisi.*
We beat the sea-sausage flexible and soft, because the sea-sausage is a tough thing.

(14) *Tea tatasu he eara na ibun rara amaa iobo tea sinaka, eara repaa tatasu riori bona ta hiovu.*
For the beating we put some sea-sausages on the *sinaka* stick, and then we beat them with the digging stick.

(15) *Beo iobo bebeahu ae taveraha, eara repaa kona voen paa muraka vai vuru, eara repaa antee tea tasu.*
When the sea-sausage is long and flattened, we know that it is soft now so that we can stop beating it.

Subject Index

This subject index is divided in six subsections. Section 1 and Section 2 list plants that are used for artifacts and Section 3 plants that are mentioned by the authors, but have other or no uses. The Artifacts produced from plant materials are listed in six subsections of 4. Section 5 lists the seashells that are used for scraping rough surfaces and as parts of fishing nets, and Section 6 the white sand, the coconut husk and stones that are used as tools. Apart from the English keywords, there are some keywords that are compounds formed by an English generic term, e.g. 'palm', and a Teop specific term, when we did not know the English translation equivalent, e.g. '*Kobuu* Palm'. The English keywords are followed by the Teop term in brackets, e.g. 'Albert Palm' (*pakoo*), which facilitates easy searches in the Multifunctional Teop-English Dictionary (Mosel 2019).

If you are reading the PDF version of this book, the references below can be clicked and used like hyperlinks. For example, in "Bengal Ficus (*ruhu*) (11:80)", the first number (11) links to the bilingual text in chapter 11, while the second number (80) links to example line 80 in the glossed text.

1 Palms and trees

Albert Palm (*pakoo*) (18:6 ff)
Bengal Ficus (*ruhu*) (11:80 ff)
Blackboard Tree (*naosinivi*, *sinivi*) (7:1 ff)
Breadfruit Tree (*baneo*) (8:1 ff), (27:2 ff), (27:32), (29:24 ff)
Coastal Hibiscus (*roge*) (12:1 ff), (14:9), (23:10), (27:37)
Coconut Palm (*overe*) (5:1 ff)
Ficus sp. (*bio*) (7:2)
Kobuu palm (20:4 ff)
Kopihoo Tree (23:1 ff)
Kugumaru Palm (*kumako*) (20:5)
Maramakasi Tree (7:2)
Miimiana Palm (29:11), (29:22)
Mangrove Tree (*boon*) (5:52 ff), (31:8)
New Guinea Teak (*toraha*) (16:7)
Putty Nut Tree (*asita*) (24:39)
Sago Palm (*atovo*) (6:1 ff); (16:28), (17:1 ff), (18:3 ff)
Sea Poison Tree (*poosusu*) (9:1 ff)

2 Other plants used for houses, canoes and fishing equipment

Bamboo sp. (*koopu*) (10:30 ff), (17:26), (19:1 ff), (28:7)
Bamboo sp. (*koverau*) (10:1 ff), (29:7), (29:17 ff)
Bamboo sp. (*kururu*) (10:22 ff), (17:20), (17:23 ff), (29:13)
Calamus cane (*obai*) (6:35), (11:44 ff), (17:38), (18:3 ff)
Nin reed (17:31 ff), (17:38)
Pandanus (*karaa*) (13:1 ff), (14:1 ff)
Vine, generic term (*kara koris*) (11:6), (11:18), (11:23)f, (11:33)
Vine sp. (*ariono*) (11:5 ff), (34:8 ff)
Vine sp. (*kara kave* 'net vine') (11:17 ff), (29:12), (29:26 ff), (29:37 ff)
Vine sp. (*kara raviana*) (11:75 ff), (29:9), (29:29), (29:63)
Vine sp. (*kara sareai*) (17:38), (18:3 ff)
Wild banana (*veresun*) (11:50 ff), (20:6)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

3 Plants with other or no uses

Beach Morning Glory (11:96 ff)
Gras (11:10 ff)
Herbs used for the launching of turtle nets (28:3 ff)
Pandanus used for mats and hoods (13:1 ff), (14:1 ff)
Passion Flower (11:32 ff)
Vine sp. for medicinal use (*kara koremana*) (11:26 ff)
Vine sp. for medicinal use (*kara rovivi*) (11:64 ff)
Weed (*kara aisi*) (11:1 ff)
Weed (*kara pihi*) (11:60 ff)
Wild banana sheaths (*kara orovi*) for mats (11:50 ff)
Wild banana sheaths (*kara urisi*) for straps and tapes (11:88 ff), (20:6 f)

4 Artifacts made from plant materials

4.1 Strings and threads

String (generic term *kanono*) (5:120 ff), (10:19), (11:21), (27:9 ff), (27:36), (29:25), (29:28), (29:35 ff), (33:2 ff)
String made of *ariono* vines (11:5 ff), (34:8 ff)
String made of breadfruit tree fibres (8:10 ff), (27:7 ff), (27:32), (29:12)
String made of calamus canes (6:32), (6:35), (11:44 ff), (17:38),(18:3), (18:5), (18:11)
String made of fibres of the coconut husk (5:120 ff)
String made of hibiscus fibres (12:1 ff), (14:13)
String made of net vines (11:17 ff), (29:12), (29:26 ff), (29:37 ff)
String made of *nin* reed (17:38)
String made of *raviana* vines (11:75 ff), (29:9), (29:29 ff)
String made of *sareai* vines (17:38), (18:3), (18:5)
String used for the seam of nets (*roveana*) (9:6 ff). (27:26), (27:36 f), (29:54 ff)
String used as a feeling line of the turtle net (*kara haraharaa*) (29:4)
Thread (*sigauva*) made of hibiscus fibres (14:13)

4.2 Clothing

Hat (13:21)
Hood (14:1 ff)
Skirt (12:9 ff)

4.3 Household items

Backpack (11:88 ff), (12:7 f)
Basket, generic term (*hoi*) (5:103 ff), (13:15), (13:21), (36:6 ff), (37:9 ff), (38:2 ff)
Broom (5:109 ff), (6:22)
Coconut grater (5:75 ff)
Coconut husk (14:9)
Coconut husker (5:50 ff)
Containers made of bamboo (10:24 ff), (10:32 ff), (28:7 ff)
Knife made of bamboo (38:2)
Mat (*vonaha*) (11:50 ff),(13:1 ff), (13:21)
Mat (*bana*) (26:48 ff)
Planting stick (5:181 f)
Tray (5:107)

4.4 House Building

Frame (16:1 ff)
Roof (6:29 ff), (16:19 ff), 16:34 ff), (17:1 ff), (18:1 ff)
Wall (10:39 f), (19:1 ff)
Floor (6:23 ff), (16:39 ff), 20:1 ff)

4.5 Canoe building

Hull (7:1 ff), (22:1 ff)
Outrigger (11:79), (23:1 ff)
Outrigger boom (*vanai*) (24:44 f)
Outrigger float (*aga*) (23:2 ff), (24:45), (24:48 ff)

Proofreading version. Do not quote. Final version available from http://www.langsci-press.org

4.6 Artifacts for catching fish and seafood

Basket for collecting sea sausages (*bonaa*)	(5:101), (39:4 f), (39:10)
Baton (*popoura*)	(30:16)
Digging stick (*pusu hiovu*, *ta hiovu*)	(39:4 ff), (39:8)
Fishing net, generic term (*kave*)	(27:1 ff), (28:1 ff), (29:3), (30:1 ff), (31:1 ff), (32:2 ff)
Fishing net for turtles (*kave goroto*)	(8:3 ff), (26:22 ff), (27:1 ff), (28:1 ff)
Fishing net on frame (*kakavei*)	(29:1 ff)
Fishing spear (*makaree*)	(10:7 ff), (30:15), (32:19)
Fishing stick (*sinaka*)	(35:7), (39:4 ff), (39:14)
Floats of a fishing net (*ogaoga*)	(9:1 ff), (27:32 ff)
String or thin stick used for carrying fish or sea-sausages	(32:19)
Wedges for the bamboo frame net (*kapikapis*)	(29:31 f), (29:66 f)

5 Seashells used as tools and as parts of fishing nets

Seashell, generic term (*kehaa*)	(5:75), (5:84), (8:20) (11:54), (27:5), (27:24 ff), (27:29), (29:27)
Ark Clam (*sui*)	(8:21), (27:5), (27:8)
Helmet Shell (*roravita*)	(27:27 ff)
Thorny Oyster (*korivahi*)	(5:76 ff)
Tiger Cowry (*koriitoo*)	(27:26 ff)

6 Other natural objects used as tools

Coconut husk used for scraping (*pesu-paava*)	(14:9)
Stone (*vasu*)	(5:69), (37:9), (37:13)
White sand(*kakaamuru*)	(14:10)
