Chapter 27

Kave goroto – The turtle net

Mark Tahi & Enoch Horai Magum

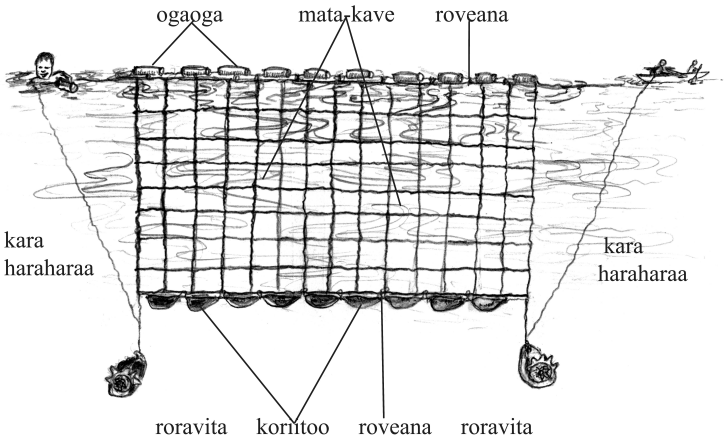

Figure 1: *Kave goroto* – Turtle net

(1) ***Kave goroto***
(2) *O kave goroto vai Teapu na paku-paku raara bono naono to dao raara bono baneo.*

Turtle net
The Teop turtle net, we make it from a tree that we call the bread-fruit tree.

Mark Tahi & Enoch Horai Magum. 2026. *Kave goroto* – the turtle net. In Ulrike Mosel (ed.), *The material culture of the Teop people of Bougainville*, 193–197. Berlin: Language Science Press. DOI: 10.5281/zenodo.22880280

(3)	*O baneo bona he toro sii vaamanae koa.*	But the breadfruit tree must be quite young.
(4)	*A taba momohu toro paku ara, eara toro mosi gunaha o baneo.*	The first thing we must do, we must cut down the breadfruit tree.
(5)	*Beve obete nana teo kasuana, eara repaa kahu a kapa nae bono kehaa to dao raara bono sui.*	When it is lying on the ground, we scrape its bark off with a shell that we call *sui* 'ark clam'.
(6)	*Beara kahu vakavakavara e, eara repaa varoava e bono buaku ge o kukan o bon.*	When we have finished scraping it, we put it into the sun for two or three days.

(a) (b)

Figure 2: (a) *Koriitoo* – Tiger Cowrie, (b) *Sui* – Ark Clam

Figure 3: *Roravita* – Helmet Shell

(7)	*Beve raka vaantee, eara repaa hihi kahi e bono naono nae.*	When it is dry enough, we remove the fibres from its wood.
(8)	*Beara hihi vakavara e, eara repaa hupihupi e bono sui.*	When we have removed them, we comb them with the ark shell.
(9)	*Beara hupihupi vakavara e, a kiu vaa tea vinugu repaa taneo, ore tavus potee bona kanono.*	When we have finished combing them, the work of twisting starts, so that they become a string.
(10)	*A kiu vai na antee nana bona buaku ge a dorana a otei tea peha kanono,*	This work needs two or four men for one string,
(11)	*bea meha buaku ge a dorana vinugu batari bona meha kanono.*	while another two or four twist another string.
(12)	*A kiu vai toro vatotoena ni ara, tabae a kave toro bebeahu.*	This work we must share, because the net should become long.
(13)	*Bea kiu vaa tea vinugu kavara, eara repaa vavaantee nia maa kanono,*	When the work of twisting is finished, we have made the strings long enough,
(14)	*ei kou toro bebeahu vaantee.*	because they must be long enough.
(15)	*Bea maa kanono vavaantee vakavara, eara repaa vaahana riori teo naono,*	When the strings have all become long enough, we hang them on a tree,
(16)	*eara repaa rahi vatotobin riori.*	then we pull them straight.
(17)	*Beve kavara o hum kiu bona, eara repaa taneo mana tea huha.*	When this part of the work is finished, we eventually start with the tying.
(18)	*A kave na tanetaneo raara bona taba to dao raara bona tavara.*	The net, we start with a thing that we call *tavara*.[1]
(19)	*Evehee, beara mei rara tea taneo, eara toro varaarare ni roho a tatabonata na kave bara bebeahu nae.*	But before we start, we must decide on the width of the net and its length.

[1]The *tavara* is a rectangular piece of *kururu* bamboo that is used to measure the size of the meshes, see Chapter 29:13.

(20)	*Beara vuha vaapeha meo ipinoo to paa vamoromoroko ni vuara,*	When we have agreed on the measurement that we have talked about,
(21)	*eara paku vai a tavara to kahi ipinoo bata nom ara o mata kave.*	we make the *tavara* (a piece of bamboo) which we are going to use for mesuring the meshes of the net.
(22)	*Be kavara amaa vamoromoroko, eara repaa taneo tea huha kave.*	When the discussions are finished, we start tying the net.
(23)	*A kiu a beera, me kahi huha vuara bona maa bon amaa bero.*	The work is big, and we will tie (the net) many days.
(24)	*Be kavara a kiu vaa tea huha, eara repaa paku pete a kiu vaa tea ibun bono kehaa.*	When the work of tying is finsihed, we will continue with the work of threading the shells.
(25)	*Amaa kehaa bona to dao raara bono koriitoo.*	These shells we call *koriitoo* 'Tiger Cowrie'
(26)	*O koriitoo kou to kahi ibun raara teo roveana vaa paana kave, eove to kahi rahirahi vaadovo bata ni nom bona kave.*	The Tiger Cowry shells we thread onto the seam at the bottom of the net, they will pull the net down and make it sink into the deep sea.
(27)	*Be kavara a kiu bona, eara repaa gono pete maa o buo roravita mene vaataena kave.*	When this work is finished, we get two helmet shells for the bottom of the net.
(28)	*O peho teo meho punete, o meho he teo meho punete.*	One for one edge, the other one for the other edge.
(29)	*A bua kehaa bona to kahi ato vamasuu bata ni nom bona kave*	These two shells will hold the net steady
(30)	*to mene orooro kahi batana bona maa hum to kahi vavaagunaha kave raara.*	that otherwise would float away from the places where we would drop the net down.
(31)	*O buo kara haraharaa mee kahi pam ni raara teo buo roravita.*	We tie two feeling lines to the Helmet Shells.
(32)	*O ogaoga na kave he na paku raara bono naono no baneo to paa hihi kahi vuara bona kapa nae.*	The floats of the net, however, we make from the wood of the breadfruit tree from which we have removed its bark.

(33) *Na mosimosi vakakato raara beara ipinoo bata rae bona ta naono to paa vaantee vuara bona bebeahu no buo kubisi bebeahu na kuri raara.*
We cut it into short pieces, while measuring it with a piece of wood that we have made as long as the length of the two middle fingers of our hand.

(34) *Beara mosi kurukurus bata rae, a mosi toro kerun tamuana batana.*
When we cut it into pieces, the cut must always be diagonal.

(35) *Eara kahi mosi kurus bata nom, beo meho sii aba vaanana vaaraka bata ni rori bari teo suraa.*
We will do the cutting, while other people are warming and drying the pieces of wood over the fire.

(36) *Be kavara, eara repaa ibun mana riori tea kara kanono to dao raara bona roveana.*
When this is finished, we thread them onto the string that we call *roveana* 'the seam'.

(37) *O kanono bona he na pakupaku raara bona roge.*
This string we make from the coastal hibiscus.[2]

[2]See Chapter 12:6.
